## PREFATORY NOTE

The volume which is now offered to the public was undertaken in consequence of the interest which was aroused by a paper read before the Royal Historical Society in May 1889. It had been previously intended to print Walter of Henley's Husbondry in the Appendix of the Grouth of English Industry and Commerce during the Early and Middle Ages (Camb. Univ. Press, 1890); but the author gladly gave way when it became apparent that the Council of the Society would arrange for the publication of the four treatises which are so intimately connected. The task of selecting the best text for transcription and of translating has involved much more work than was apparent at first ; where difficulties are still unsolved they have been stated in a mamer which may assist other students in the endeavour to carry the investigation further. Dr. Braunholt\%, lecturer in French in the University of Cambridge, has kindly read the proofs and made many valuable suggestions, and we take this opportunity of expressing our in-
debtedness to him for the constant assistance he has rendered. We also desire to thank the authorities of the Cathedral Library at Canterbury, and of the Heralds' College, for access to copies of the different treatises in their charge, and the Master and Fellows of S. John's College, Cambridge, and of Merton College, Oxford, for allowing their MSS. to be transcribed.

## INTRODUCTION

The four treatises which are brought together in this volume are of interest from many points of view. A work attributed to Robert Grosseteste deserves to be rescued from oblivion, and the peculiarities of the dialect in which these writings were composed may attract the attention of students of early French. Others may, however, be led to examine them from an interest in the subject-matter of which they treat, and this has been the primary consideration in planning the present edition. The work of an author who is only known through this book, and two anonymous treatises, hare been placed alongside the maxims which were laid down by the great Bishop of Lincoln, for they deal, and deal at greater length, with the management of estates. Public attention has been called to the treatise of Walter of Henley by Professor Thorold Rogers, who has made frequent reference to it in the earlier rolumes of his great work on Agriculture and Prices, and it is most desirable that the first-hand evidence on this important side of the life of our forefathers should be rendered generally accessible to students of English History. This is more especially the case, as the various treatises, in so far as they have been printed already, have been curiously mangled ; it has been an interesting task to try and disentangle the confusion into which they have been thrown, and present them as nearly as possible in their original form, while at the same time the whole of the interpolated matter has also been retained. The student has now access to
the thirteenth century treatises, and the means of noticing the later accretions.

At the same time, while the main object of the Royal Historical Society in undertaking this work must naturally be to render the whole of the matter these treatises contain accessible to the members, the literary interest which attaches to these writings has not been altogether neglected. It is hoped that the work of grouping the MSS. and discriminating the insertions has been so far accomplished as to facilitate the work of anyone who may hereafter undertake the work of issuing a critical edition of the text. Several of the fourteenth century MSS. are written in French closely corresponding to that in the Statute Book, but the earlier MSS. give readings which appear to be somewhat more colloquial; and there is very great difficulty in attempting to reconstruct the language that Walter of Henley personally used, either in dictating or in writing. This difficult task has not been attempted in the present edition; the text in each case is a simple transcript of a single MSS., which has been reproduced, withont correction, even in those cases where there were obrious slips on the part of the transcribers. Though it was tempting to make a more ambitious effort, there is reason to believe that, by supplying a text which has not been tampered with under pretence of correction, the Society has furnished a sound basis to students for further investigations.

In this translation, also, the requirements of the modern historical student have been kept in view, as the main object has been to render the matter of these treatises readily accessible. In no case, therefore, has the English been sacrificed in the attempt to reproduce the construction of the French sentences as closely as possible, while the text affords the means of verifying the substantial correctness of the translation. Doubtful and disputed renderings are for the most part discussed in the Glossary.

The treatises are distinctly practical, and were intended to assist men in the ordinary business of life ; they assumed on the part of the readers a familiar linowledge of institu-
tions and practices that have long since passed array. Though they so far supplement one another as to give a fairly complete picture of the life in a thirteenth century manor, it may be convenient to introduce a brief sketch of the organisation of a mediæral estate, and to trace the causes which brought about the destruction of the system that was then in rogue.

This introduction will deal in turn with the following topies:-
I. Thirteenth century estate management.
II. The relations of these treatises.
III. Walter of Henley's Inslumiry.

IT. The anonymous Insbandry.
Y. Seneschancie.
II. Grosseteste's Iimles.

## I.

## thirteenth centcri estate mandgement.

There are many contrasts between the landed system which obtains in this country at present and the mode of estate management which was in vogue when Walter of Henley wrote. Perhaps the tro most important differences are these: (1) That there are now three classes concerned in agriculture where formerly there were only two: and (2) that the economic obligations of these classes toward each other are now discharged in cash, whereas in former days they were often paid either wholly or in part in kind.

1. We halitually classify the agricultural population into the landlord who owns the land and buildings and receives rent, the farmer who supplics the capital and superintends and looks for profit, and the labourer who does the work and is paid a weekly wage. In all probability the landlord has rery little, if any, land in his own hands, and though he may sink capital in permanent improtements, he does not feel called unon to provide the stork on the
farms. In the thirteenth century, however, there were only tro economic classes, ${ }^{1}$ not three, and the lord had a large home farm or domain land which was his chief source of income.

This home farm was cultivated by the labour of the villans, who were required to spend on it so many days each week, according to the season of the year, and who had to discharge certain occasional services as well. In return the lord supplied them with small holdings which they could cultivate on their own account on any days when they were not obliged to be at work on the domain lands; and the villan when he entered on his holding received an outfit from the lord of the stock which was requisite to work his holding. The rillan may thus be regarded as a labourer on the home farm, whose regular days of labour (week work, dies operabiles) and times of special employment (boon work, precaric) were accurately defined, and whose rations on his working days were carefully specified, but who had all the rest of his time to himself, and whose chief maintenance came from his own holding. The villan was not paid wages like the modern labourer, but in an ordinary way he worked three days a week on the domain land, he gave besides extra days in autumn, and performed other incidental duties, and he had in return his meals on some of the working days, and a holding (virgata) of about thirty acres, which his lord stocked with a yoke of oxen and half-a-dozen sheep when the villan first entered on his tenancy.

By a process which has many parallels in feudal times, the obligations which originally attached to the rillans personally came to be connected with the holdings they enjoyed. We thus get the whole of the villan's rirgates spoken of as servile land, and the obligations of work on

[^1][^2]the domain land can be best regarded as incident to the tenure of a piece of servile land. We might thus have a freeman who was not personally of villan status, but who had undertaken to work a plot of servile land, and was to that extent obliged to render his quota of villan services on the domain land. From this point of view it is easy to see that the relation of the villan to his lord may be compared, not with that of the modern labourer, as is done above, but with that of the modern farmer. He may be regarded as a tenant who received a certain area of land ready stocked, and who in return paid a rent in the form of service.

The successful working of the domain land was the really important thing for the lord in considering the management of his estates; and the main element of success depended on the labour arailable. The science of agriculture was in its infancy, root crops were unknown, and there were no artificial grasses; a system of rotation as practised in the present day was impossible. On some estates each field was allowed to lie fallow every other year (two-field system), on other estates every third year (threefield system), and these different methods are described in Walter of Henley's treatise. Though they were accustomed to manure the land, and in some districts used marl, they did comparatively little in the way of drainage. ${ }^{1}$ Modern methods of agriculture and the modern application of capital to land were impracticable. The one necessity was labour; from the estate which was well stocked with men and with oxen a fair income could be derived; but if there was no labour a a ailable, the estate could only have a prairie value. The consequence is that the variations in the value of land at any time of social convulsion might be very great; if the labourers deserted the estate, or died, the value declined immensely ; while if the estate were restocked with labour, its value would be restored almost as rapidly as it had sunk. The curious variations in the ralue (not merely in the rating) of the

[^3]estates during the disturbance caused by the Norman Conquest, and still more after the Black Death, only become intelligible when we remember how closely the value of the estate depended on the maintenance of a sufficient head of labour.

This, then, was a fundamental principle which underlay the whole scheme of rural management, that the persons of the labourers should be retained on the estate, and that their progeny should not be permitted to aroid becoming liable to the same obligations in turn. The whole of the social restrictions on villans putting their children to school, or allowing them to be ordained, or to be apprenticed in a town, had this as their economic justification-that there must be arailable labour for the home farm. These restrictions were so universally linown that Walter of Henley did not think it necessary to allude to them ; he is rather concerned with the other question as to the means of getting their full quotas of work out of the servile tenants. And he points out important aid which may be secured in this matter by laying stress on the communal obligations of the villans. The rillans as a whole were responsible, and if anyone failed to perform his service, the others might be required to make good his deficiency. It is obrious that this principle of communal responsibility might be urged so as to be very oppressive, and with the riew of exacting far more than the defined obligations of the tenants. It offers, like so many of the matters touched upon, an interesting subject for investigation, as it would be curious to know how far it was successfully insisted upon, and whether this claim formed an element in fomenting the discontent which followed the Black Death.

To carry out this system of management it was of course necessary to have a considerable staff of officials. The bailiff was appointed by the lord to look after the whole estate in detail ; his duties closely resembled the occupations of a modern farmer, as he was responsible for all the stock on the home farm, as well as for seeing that the labourers paid their proper services; he was directly
responsible to the lord for everything connected with the prosperity of the estate, and had to account in great detail for everything under his charge. The two minor but very important officials were the prepositus and the hayward (messor), who were somewhat like foremen labourers; the former seems to have been the official representative of the villans, who was responsible for them; the latter had to supply their contributions of seed, and to be present to superintend their work. A large landed proprietor, who had estates in different places, would also require a seneschal (or steward) who should represent the lord personally and hold the manorial courts on his behalf. His duties were legal rather than economic, though he had the general superintendence of everything on the estate; he was not, however, possessed of complete authority, as he could not dismiss a responsible servant, like a bailiff, without the consent of the lord himself.
2. The origin of the legal powers of the lord of the manor and the actual conditions which gave rise to the different types of villanage do not concern us here ; it may suffice to say that the manor, as an economic institution, has interesting analogies in earlier history as well as in backward countries in the present day. Wherever we have an estate organised as a whole, and which has very little communication with the outside world, it will be difficult for the owner to realise the produce of the land or to make purchases. His object will be to render the estate, so far as may be, self-sufficient. He will consume or store the produce of the estate, and he will endearour so to utilise its resources that there will be little need to purchase anything from the outside. This principle is plainly laid down in Charles the Great's Capitulary de I'illis, it is explicitly. stated in Grosseteste's Rulcs, and it may be taken as a fundamental maxim for the judicious management of land, as understood in days when roads were bad and the opportunities of trade infrequent, since the business of the country was mainly carried on at annual fairs. It follows almost necessarily that the landowner had comparatively
little to offer for sale ; if his granary was full and all possible requirements were provided for, he would be willing to sell the surplus corn, if he could get a good price for it. But if the harvest had been a scanty one, he would have little if anything to spare, as he had to look to home requirements first of all, and if the price was very low he might prefer to store his grain rather than sell it at a very low figure. This is a statement of the policy he aimed at, but in practice it could not be fully carried out; metals and salt would be wanted on estates where they could only be procured by trade. It would hardly have been possible to levy a Danegeld unless rural proprietors generally were accustomed to sell a portion of the produce and to lay up a hoard of silver; but the circulating medium was not always available, and fiscal obligations were sometimes discharged in kind as late as the time of Henry I. The rural proprietors frequently had to buy and attempted to sell, but they had no occasion to open up new markets or develop internal trade, as the policy of each was to do without trade as far as possible.

The surplus available for sale would, generally speaking, bear a very small proportion to the total crop. The seed was generally provided by the villans, but the necessary stores for their rations on boon days, together with the supplies for the lord and his household, must hare absorbed the greater part. In some estates, where the owner was not even an occasional visitor but an absentee, there would be no need to retain provisions for his table ; hence on monastic estates, when situated at a distance from the monastery, it would le convenient to sell a larger proportion of the produce and to transmit the value to the abbey. It is thus obvious that, even on adjoining estates, there might be considerable differences in the degree in which their respective managers ventured to have recourse to trade; some might be able to sell half the produce or more in ordinary years, while others would be forced to retain almost the whole crop to meet the requirements of the villans and the household.

It is hardly conceivable that there could be regular
money payments within an estate so long as it was practically isolated and there was little regular trade. If the lord did not sell his corn, he could have no silver with which to pay labourers' wages; if the villan did not sell some of the produce of his holding, or earn a day's wages by working now and then in his own time for the lord, he could not buy his freedom from predial service by regular cash payments. But as the estates lost their isolation, and the habit of selling a large proportion of the produce became more common, the conditions were present in which the lord could begin to receive payments in lieu of service, and to hire labourers to work his home farm if he preferred this system. There was thus in the twelfth century a gradual approximation to more modern conditions on many estates; the home farm was worked by hired labourers who received wages; while the villans had bought themselves off from the obligation of doing the customary work by paying a quit-rent. The increase of the practice of selling produce off the land, and of satisfying the mutual obligations of the dwellers on the estate in cash, would go on together. Within the present century the railway system has opened up facilities for trade in dairy produce which did not previously exist, and allowances in milk are less frequent than formerly. But it would seem that the practice of commuting service for cash payments had begun to show itself in some places before the Conquest ; ${ }^{1}$ and it appears to have advanced steadily in all parts of the country as the conditions became present which rendered cash payments possible between the lord and the labourers or tenants.

Even if the obligations were rarely discharged in cash by the villans in the time of the Confessor, the relation between their duties and money, i.e. the cash equivalent of their services, could be stated with precision. In every Domesday entry in turn we find an estimate of the worth of the estate, which was, of course, mainly dependent on the villans' obligations, and this is stated in terms of moner.

[^4]It was, apparently, argued in later times, from the mode of statement adopted in the Great Survey, ${ }^{1}$ that the predial services had been all commuted for money before the Norman Conquest. But the practice of estimating in terms of money the value of obligations which were discharged by actual service was common in the thirteenth century; and though it is clear that the process of commutation had already legun in the time of the Confessor, there is reason to believe that it mas quite exceptional. A very ordinary arrangement in the time of Edward I. appears to have been that the villans' obligations were stated in terms of money, but were paid either in services or in cash at the will of the lord. If partly paid in cash, the villan would still have to defray his remaining duties and dues in service or kind. When the villan paid to be quit of the ordinary week work, and, so to speak, bought his time for himself during any one year, his payment was entered as opera vendita. Some were able, however, to pay cash every year and to be quit of these services quite regularly; they are sometimes spoken of as molmen ; ${ }^{2}$ or the fact that the lord had agreed to take cash in lieu of all services ${ }^{3}$ is noted in the Extent, which describes the condition of his estate, or is drawn out in detail in a special document. ${ }^{4}$ When this stage was reached, the villan, with his virgate of thirty acres in the common arable fields, was in a position very similar to that of the modern peasant farmer who pars rent for his land.

The change by which one portion and another of the villans' obligations were commuted for cash seems to have gone on slowly, here and there, all over the country. When the villan had the opportunity of paying cash he might possibly be glad to buy his freedom, and be his orn master all through the week; this was certainly the case after the Black Death, when his labour had become much more raluable, as it would obriously be to his interest then

[^5]to buy his own time from the lord at the old customary rates if he could. In the thirteenth century, howerer, it may have been the lord rather than the villan who preferred to insist on cash payment where he could, as there was less trouble in collecting the payments than in superintending the regular work day by day throughout the year ; and there was less difficulty about the quality of the coin than about the diligence of the service. It thus appears that, from the side both of the villan and of the lord, the change from actual services to cash payment would be welcome, where the circumstances of the estate rendered it possible.

This change in the relations between the villan and the lord necessitated other changes in the management of the home farm. The lord might work his domain land with hired labour, or he might break it up into holdings and let it, or he might use it as a sheep farm ; the last expedient was increasingly adopted after the Black Death. This terrible catastrophe gave a blow to the system of farming with hired labour, as the rates of wages became abnormally high, and it could scarcely be remunerative. The estates on which bailiff farming had most chance of surviving were those where there had been least change, and where the actual services were still dut. Even before 1349 the lods on some estates had broken up the home farm and rented it in portions to the tenants, who were collectively responsible for the payment of their money-rents, as they had formerly been for rendering predial services. An instuctive case occurs in the letting of the St. Albans: estate at Granborough in Buckinghamshire in 1346.

It is now possible to describe with greater precision the nature of the topics treated in each of the four treatises which are here printed. The general subjeet is the management of estates, and in the management of ann wiate the successful working of the home farm-minder the siperintendence of a bailiff, and by means of the serviees of the villans, with the assistance of hired labuurers-was the chief element of success. They deal primarily with bailiff farm-
ing, and with bailiff farming as it was organised in the thirteenth century. All four treatises apparently date from this period, though only one of them can be assigned with precision. There must surely have been some remarkable conditions at that time which resulted in the production of these independent treatises, which so met the requirements of the English landlord that no serious attempt was made to supersede them till the sisteenth century.

Professor Thorold Pogers fixes on the reign of Henry III. as the time when the practice of keeping written accounts on each estate became general ; ${ }^{1}$ this was another symptom, and a very important symptom, of the increased care which was devoted to the management of estates. Possibly the general political conditions were farourable to rural prosperity, but it is also probable that the industrial and commercial activity of the twelfth century had begun to react on rural affairs. The Crusaders had given an impulse, under which foreign trade had flowished greatly, and many towns had grown into some importance. There may have been some direct influence in the planting of new monasteries and experience of new settlers, but at any rate the agriculturist would have new markets, and be tempted to realise his produce more readily; and as the separate estates were drawn more and more into the stream of internal commerce, the difficulty of superintending the management and checking the servants would increase, unless they were compelled to keep regular accounts. The greater responsibilities of the bailiff, who not only superintended the villans but sold a larger proportion of the produce off the estate, rendered it necessary that accounts should be regularly kept ; and the mere fact that estate management had become more complicated and difficult sufficiently explains why it attracted more attention, and called forth these systematic treatises.

## II.

THE RELATION OF THESE TREATISES.
The four treatises which are included in this rolume have many interesting points of comnexion ; they contain practical hints set forth by practical men to assist others in the management of their affairs; they deal simply with matters of ordinary experience. Nor do the authors attempt to follow and apply the principles of any classical authority; it is a genuine effort to put on record the unwritten wisdom of the time. Hence they represent a fresh and genuine literary effort of certain Englishmen who wrote about agriculture in a thoroughly English spirit. Fragments of English speech crop up here and there, and give a sufficient flarour of our soil, but the whole dialect is the Anglicised Norman French, of which few prose specimens survive outside the Statute Book. Offensive as it is to the eye of a French scholar, the language clearly indicates the insular origin of the treatises which employ it.

While these treatises are thus similar, and while they to some extent overlap, they also serve to supplement one another, as the precise object is different in each case. The treatise of Walter of Henley is a survey of each of the departments of rural economy in turn ; ploughing and harrowing and other operations come within his view ; he gives suggestions to enable the lord to aroid the leakiage which occurs so easily when there is no careful supervision, and his treatise supposes that the lord would look into crerything himself. It is rightly entitled IInshemetry, not because it has to do with tillage, but hecause it shows how he may husband his resources and manage thriftily.

The anonymous Insbandry is primarily conerned with the estate accounts ; it adrises the traditional lolicy of rendering the estate as self-sufficient as possillle, but it describes how the accomnts shond lee kept and passed, while it gives rough estimates which may enable the lord to check the rates at which the bailiff calls on him to pay.

It has less reference to the actual management of the land itself than to the accounts of the bailiff and the means of checking them.

The Seneschaucic is even further removed from the details of rural employments; it deals with the duties of each officer in turn, and describes the functions of the steward, the bailiff, the prepositus, and so forth. It reveals a curions division of the labour of superintendence, and sets forth the relations of these officers to one another in some detail. It is more wordy and formal than the other writings, and has closer relations than theirs to legal documents, such as those contained in the Statute Book.

Grosseteste's Rules, though quite as practical as Walter of Henley's Treatise, were intended for a great Countess, who could not possibly look into everything herself. It brings in a side of life which the other treatises leare untouched, as it deals not only with production but consumption, and lays down maxims for the management of the household.

This last work appears to have had but little circulation ; though it deals with many topics, the treatment is somewhat slight, and eren the great reputation of the author did not prevent it from falling into oblivion. The Seneschaucie ceased to be of much interest as the services of the rillans were commuted, and the personal presence of the hayward and others was no longer demanded. As bailiff farming gradually ceased to pay and disappeared, the instructions in the anonymous Husbundry for checking accounts were also out of date. The one treatise which had real ritality was that of Walter of Henley; his practical hints on the details of rural life had a lasting importance ; it continued to be in frequent use and in wide circulation; additional matter was incorporated in it as the changed circumstances of agriculture demanded; it was thought worthy of re-issue from an English printing-press for the guidance of practical men, more than two hundred years after it was written.' At length it lost its pusition as the best book on the subjeet,
because it was superseded by the work of Sir Anthony Fitzherbert, ${ }^{1}$ in which, however, much of the earlier treatise was incorporated without acknowledgment. Eren then, howerer, it was not wholly forgotten ; Gervase Markham, when writing on the Emriclument of the Weald of Kent, quotes Sir Walter of Henley as an authority who recommended that marl should not be ploughed into the soil, for while the virtue of dung will ascend, however deep it lie, 'marle sendeth his vertue downward, and must therefore be kept aloft and may not be buried in any wise, p. 11. He also refers to 'Books of gainage or husbandry that were written in the days of Edward II. or before,' p. 4 , a double mode of reference which we also find in Lambarde's note-book, mentioned below.

## III.

Walter of henley's hUsbandry.

1. Of Walter of Henley, only one thing is known for certain. He liad served the office of bailiff, for he makes incidental mention of the fact. The title of the manuscript (13) marked Dd. vii. 6 in the Cambridge University Library gives some further details, hut on what anthority is unknown. It runs as follows: 'Ceste ditee si fesoyt sire Waltier de hengleye qui primes fu chinalier e puis se rendesist frere precheur e le fist de housebonderie e the gaygnerie e de issue de estor.'

This gives us broad limits as to the date when the author flourished; the Dominicans came to England in 1221, and settled in Holborn and at Oxford during that year. It is most unlikely that the IInsbandry was written before the thirteenth century opened; while, on the other hand, there is a MS. of the treatise at Canterbury written, as I am told by Dr. Sheppard-in the hand of John de Gare, who was clerk to the Prior-in the early years of Edward I. Within these limits there are no precise data available at present for fixing the exact time when the

[^6]treatise was written, though it is not impossible that some mention of this Walter may sooner or later turn up.

If a guess were hazarded as to the direction in which it would be best worth while to begin such a search, there are some grounds for examining the splendid collection of records in the Cathedral library at Canterbury. Walter of Henley's treatise was known at Canterbury at a very early date ; it continued to be prized and copied at Christchurch, as no fewer than four of the existing manuscripts were written there. Curiously enough, there are two or three Canterbury manors in the immediate neighbourhood of Henley, at Monks Risborough, Newington, and Brightwell. It has been suggested to me as at least conceirable that Walter was a trusted retainer of the great abbey, who might be called on to serve as a man-at-arms, and who discharged the responsible duties of bailiff on these manors ; and there may be documentary evidence which would farour this ingenious suggestion.

The argument which Professor Thorold Rogers bases on the silence of the treatise in regard to the scab does not seem rery forcible. ${ }^{1}$ Cases of this disease are not known to have occurred in England before 1283, and the silence of Walter of Henley shows that he wrote before that time, since he discusses another disease - the rot-so fully. But the passage which deals with the rot is an interpolation, which is found in one family of MSS. from the end of the thirteenth century onwards; and the transcribers would apparently have had no scruple about introducing directions for the treatment of the scab, if it had occurred to them to do so.
2. As has been stated abore, the editions of Walter of Henley contain his treatise in very mutilated forms, and the mansscripts present a curious rariety both in the matter they contain and in the arrangement they adopt. Some have considerable insertions; but it does not seem altogether impossible to arrange the MSS. in groups, and to indicate briefly the relations of these rarious groups to

[^7]one another. The clearest principle for discriminating the different families appears to be found by noticing the dirisions and headings of the chapters, and this will serve to distinguish four well-marked groups of MSS.

It may be convenient, however, to give a list of the MSS. which have come under my notice, arranged in chronological order ; the dates assigned can only be regarded as approximate.

1. Cambridge University Library, Ee. i. 1 f. 25I, Edward I.
2. Canterbury, Register J, Edward I.
3. Heralds' College, Arundel MS. xiv. Edward I.
4. Paris, Bibliothèque Nationale, 7011 f. 57, Edward I.
5. Guildhall. Liber Horn, Edward II.
6. British Museum, Cottonian MSS., Edward II.
7. Merton College, MS. ceexxi. f. 153, Edward II.
8. Bodleian Library, Donce MSS. 98 f. Isib, Edward II.
9. Cambridge University Library, MS. Dd. ix. 3s f. 252, Edward III.
10. Canterbury, Register P, Edward III.
11. Cambridge University Library, MS. Hh. iii. 11 f. 77ל, Edward III.
12. British Museum, Add. MSS. (159 f. 220b, Edward III.
13. Cambridge University Library, MS. Dd. vii. 6; f. 52b, Edward III.
14. British Museum, Lanslowne MSS. 1176 f. 131, Edward III.
15. Trinity College, Cambridge, O, 9, 26 f. 98, Edward III.
16. British Mnseum, Harleian MSS. 493 f. 498, Edward III.
17. Bodleian Library, Digby MSS. 147 f. 1, Edward III.
18. Cambridge University Library, MS. Da. vii. 14 f. 2 2es, Hemry IV.
19. British Museum, Sloane 686 f. 1, Edward IV.
20. British Museum, Add. MSS. 20,709, Elizabeth.
21. Bodleian Library, Rawlinson MSS. B 471 f. 16, Elizabeth.
A. The text of Walter of Henley appears to be preserved in its earliest arrangement, though with modernised spolling, in a fifteenth century MS. (18) in the Library of the University of Cambridge. The whole runs on without any further divisions into clapters than by the mark of a paragraph which occurs so as to mark sistcen separate parts. There are similar divisions in the copy (14) among the Lansdowne MISS. in the British Museum ; this dates from the time of Edward III., and the commencement of each chapter is marked by an elaborate initial letter, but there are neither headings nor numbers. An carlier representative of this group is the manuscript (3) in the Heralds' College, which dates from the time of Edward I. But the
transcriber inserted headings to the chapters, and it appears from the table of contents, as well as from a long insertion on sheep farming, that he also made use of a manuscript belonging to the Liber Horn family. There is a second Cambridge University \IS. (13) in which the same divisions occur, lut the chapters are numbered though they hare no headings. A third Cambridge Cniversity MS. (9), written at Reading, has the same arrangement, but the chapters are in some cases suldivided and headings are added throughout. It appears to belong to this group, but there are some differences in the text. ${ }^{1}$ A second MIS. also written at Reading (16) has been preserved in the British Museum, and is closely similar in all its features. In the whole of this group the division of chapters differs from that in the text now printed; thus the sentence about the team of oxen and horses (p.10) begins a new chapter, as does that about fallowing in April on page 12; so, too, the chapter about preparing manure (p.18) begins at the sentence which comes second in the text ; the introduction gives only one of the English proverbs. This may be distinguished as the Reading family.
B. The second family consists of two MSS., and this arrangenent of the text has been adopted in the present edition. The earlier chapters are clearly divided, and begin with a new line ; but they have no titles, while the later chapters hare. The long title of the treatise is also distinctive of this group, and the phrase, !aymage de tere, which occurs in it, is suggestive of the title moder which Matthew Parker's MS. was known, and may indicate that it belonged to this family. One of the two extant copies is in the Luffield book at Cambridge (1), and the other ( $\$$ ) among the Donce MSS. at Oxford. The Luffield appears to be the earliest example now existing, with the exception of one of the Cinterbury MSS. I smapect that the author of Fleta also used a MS. of this group.

[^8]C. The Canterbury MSS. form a group by themselves; they have the same divisions as the Luffield group, but titles are given to all the chapters. There are some peculiarities which distinguish the text of this family from that adopted in all the other MSS. In the chapter on ploughing, the quarentina is described, by a slip, as forty perches ' broad as well as forty perches long. The breadth is correctly given as 66 feet, however ; but it is said that forty turns of the plough can be made in the acre, which would give eighty furlongs ; and these eighty furlongs are stated to form four leagues of twenty furlongs. This league of two and a half miles is shorter than our present league, but much longer than the league mentioned in all the other MSS. This consisted of twelve furlongs only, or a mile and a half, and, when thirty-six turns of the plough were taken in the acre, the team trarelled six leagues. Besides this difference, the Canterbury MSS. transpose the sentences about the weeks in the year, and the length of the furrows. In the chapter about the dairy there is another transposition : the information about cows runs straight on, and the sentences about erres conclude the chapter. The transcriber had also omitted the first sentence of the chapter about preparing manure (Vostre estuble, p. 18), but added it at the conclusion of the whole treatise, where it is not particularly appropriate. This group consists of fire MSS., four of which were copied at Canterbury, two $(2,10)$ are still in the Cathedral Library, one (12) is in the British Museum, and one (15) in Trinity College, Cambridge ; and there is also a fourteenth century transcript (11) in the University Library at Cambridge, which gives no clear evidence of the place where it was written.
D. The remaining group consists of MSS. which adopt the arrangement used in the Liber Iorm. This has the same divisions as the Luffield and Canterbury groups, but the name of Walter of Henley does not occur in the title of the treatise, and the separate chapters have lengthy

[^9]titles. In the Liber Horn (5) these are prefixed as a table of contents to the whole, and also occur at the commencement of the separate chapters. The MS. (7) in Merton College Library is rery similar, as it has not only the headings of the chapters, and the table of contents, but it also agrees with the Liber Horm in giving some additional matter. In the chapter on sheep farming there is a lengthy insertion on some of the diseases of sheep, which is still further amplified in the translations. This long insertion, together with the headings of the chapters, are so characteristic, that there can be little doubt about these MSS. forming one family, though there are differences, not only in the spelling, but also in the construction of the sentences. These would be perfectly intelligible, howerer, if the copies were made by dictation. The Paris MS. (4), from which Lacour printed his Traité inédit d'économie rurale, also belongs to this family, and several of the headings of the chapters have been incorporated with the text, while a new heading is added as well; as, for example, in Chapter ix. of Lacour. In this Paris MS., however, the whole matter has been rearranged, and the anonymous IInsbandry has been incorporated with Walter of Henley's work, so as to produce a curious confusion.

As stated abore, the scribe who wrote the Heralds' College MS. (3) had access to some representative of this group, and it appears to be the foundation of the translation into Latin, which occurs in a book (17), formerly belonging to S. Mary's at Merton in Surrey, and now among the Digby MSS. in the Bodleian. The scribe who wrote the Merton College MS. had begun by translating the first chapter of the anonymous IInsbandry into Latin, but he appears to have tired of the task. The translation among the Digby MSS., though it is not exactly based on any of the French MSS. I have seen, appears to be connected with this form of the text, cither directly or through the Heralds' College MS. ; it contains Walter of Henley's name in the title, the insertion on sheep furming is still further expanded, and the whole treatise is divided in a
somewhat pedantic fashion. The chapter about the survey ends ${ }^{1}$ with the sentence about the breadth of an acre being sixty-six feet, and a new chapter, de modo arandi, begins somewhat awkwardly with the next sentence (p. 8, line 12). It is not without interest to notice that the monastery which possessed this copy was one that had long had an important trade in wool. ${ }^{2}$

This group of MSS. with the long insertion also formed the basis of an English translation (19) which occurs in a late fifteenth century hand among the Sloane MSS. in the British Museum.
3. So far for the arrangement and divisions of the text; a few words may be added about the different MSS., and in so doing it will be convenient to deal with them not in their chronological order, but with reference to the libraries where they are now to be found.

Caibridge appears to be specially rich in this department. There are no fewer than five copies in the University Library, besides one at Trinity.

## Lnirersity Library.

(13) Dd. vii. 6 f. $52 b$. This is a large folio volume on parchment, containing a collection of statutes, together with the treatises of Bracton and Fiengham. It apparently dates from the earlier part of the fourteenth century. It is interesting on account of the title, quoted above. In judging of the value of the information it affords regarding the author, we must remember that the text from which this MS. was copied must hare been of an early type, since the chapters had no headings. It is divided into sisteen chapters, similar to those in the text, and distinguished by numbers, and the introduction omits the second of the two English proverbs. The last sentence of the chapter on inspecting cattle in the present edition (p. 22) is transposed in this MS., and stands at the beginning of the chapter, but in a slightly longer form.

[^10]The most important difference from the text as printed is that this MS. contains a passage on the respective cost of ploughing on the two field and three field systems. It is an interesting sentence, and has been printed as note 1 on p. 8. From this it appears that when the two field system was in use the field under crop was partly used for wheat or rye, and partly for barley or oats; not entirely devoted to wheat or rye, as one might have supposed. It also shows that, aithough a much larger area was under crop in each year when the three field system was used, the expense of ploughing was the same on each srstem. If the land was laid out in tro fields of 80 acres each, there mould be 40 acres to plough before the wheat was sown, 40 more before the barley was sown, and 80 to be ploughed trice orer in June, when the stubble of the second field was broken up and it was left fallow, i.e. $40+40+(80 \times 2)=240$. If the three field system were used, there would be 60 acres to plough before the wheat sowing, 60 acres to plough before the barley sowing, and 60 acres to plough twice orer when the stubble was broken up in June, i.e. $60+60$ $+(60 \times 2)=240$. This sentence occurs in most of the MSS. of the Reading group, hut not in the two copies written at Reading itself; it is also found in the Liber IImn, and in the Canterbury MSS., but it does not oceir in the Heralds' College MS. It may perhaps be suggested that it oecurred in the original text, but that the sentence was omitted by the copyists, for whom it had ceased to have a practical interest. In so far as the three field system had been thoroughly established on any set of estates, this comparison of the cost of the two modes of cultivation would be of little importance, and it may have been omitted on this account. This suggestion might possibly be confirmed or disproved by an examination of the evidence as to the manner in which the Canterbury, Luffield, and Peading estates were cultirated in the fourteenth century, if the necessalry eridence is a a ailable.
(18) Dd. vii. 14 f. 228 . This is a parchment folio written in the fourteenth century, and containing Bracton,

Hengham, a collection of statutes, de. The treatise of Walter of Henley has been inserted in the time of Henry IV. It is commenced on a blank leaf, and continued along the foot of eleven subsequent pages. It has no numbers to the chapters, and no headings; the text corresponds rery closely with that of 13 , but it is somerhat later in date, and is much more carefully written. This is one of the latest transcripts, but it appears to be of great ralue for settling the form of the original mork, though the language and spelling have been modernised by the transcriber.
(9) Dd. ix. 38 f. 252 . This is a parchment folio written by various hands in the fourteenth century; it belonged to the monastery at Reading. It contains, besides a collection of statutes, much interesting information about the relations of the abbey and the town. Some of this has been printed, from other sources, by Coates in his Mistory of Peading, App. No. V. It is one of two copies of the Husbandry which were certainly written at Reading, and which I hare taken as representing one group of MSS. The text is, horrever, not precisely similar to that in the other numbers of the group; the chief difference is the omission of the sentence on the relative cost of working land on the two field and three field systems.
(1) Ee. i. 1 f. 251 . This is the MS. from which the text of the present edition is printed. It has been reproduced exactly, withont any emendations, in accordance with the reasons stated abore. The volume is a folio on parehment, and contains Bracton, Hengham, statutes of the realm, and documents relating to lands belonging to the Prior of Luffield. A considerable portion of the volume is of the time of Henry III., but the transcript of Walter of Henley appears not to be of quite such an early date ; other treatises and documents have been added and inserted in the early part of the fourtecnth century.
(11) Hh. iii. 11 f .77 l . This is a folio on parchment containing a collection of statutes, and it formerly belonged to F. Tate, a Reader in the Niddle Temple in the time of

James I. A considerable interest attaches to this volume, as it contains three of the four treatises now printed. Considering how much they have been combined in early MSS., like those printed in Fleta and by Lacour (ride sulb pp. xxxii, xxxxii), there is a satisfaction in finding them here side by side as independent treatises. Walter of Henley's treatise is in a handwriting of the fourteenth century, but that in which the other two treatises are written is somewhat later, and so cramped as to be very difficult to read.

The text and headings are those of the Canterbury MSS., but the transcriber has corrected at least one slip that runs throngh the other MISS. of this group. He gives the measurement of the acre as forty perches in length and four in breadth.
(15) Trinity College : 09,26 f. 98 . This is a late fourteenth century transcript of the Canterbury family, clearly but not very carefully written, and without any special features of interest. It consists principally of statutes, royal charters, and some forms for leases, \&c. It also contains a glossary, a few recipes, and a vision of S. Thomas of Canterbury in a later hand.

London.
(12) British Museum. Add. 6159 f. 220 b. This is a fourteenth century MS. full of documents of various kinds relating to Christchurch, Canterbury; it is clearly written, and has been used to correct the text of the present edition where it was specially difficult to construe, and it seemed to be desirable to have recourse to another form of the text.
(14) Lansdowne 1176 f. 131. This is a fourteenth century MS. fairly written on vellum, but not in good preservation. The volume also contains Bracton and several statutes. The transcript of Walter of Henley is similar to that of Dd. vii. 14 in the Cambridge University Library. It may perhaps be regarded as the earliest representative of that family, for the Heralds' College MS. appears to combine two sources; like the cthers of the group, it has no numbers to the chapters and no headings.
(19) Sloane 686 f. 1. This is an English translation
written on paper in a late fifteenth century hand ; the writing is not good, there are several careless omissions of words, and no attempt at punctuation ; it presents many curious features, and has been printed below. It appears to be founded on the same French text as the Latin translation in the Bodleian at Oxford (see below p. xxxv), for it contains considerable insertions about sheep farming. It also contains a curious passage about gleaners pocketing corn, which is not found in any of the MSS., but which appears in Fleta II. 82 § 2, and in Seneschancie (see p. 98). A statement of the English measures is also inserted as Chapter II. Besides these insertions, the text has also suffered from mutilations ; the introductory chapter in particular is much curtailed. The title states that the treatise was written in French and translated into English by Robert Grosseteste ; this is not impossible, perhaps, but it is surprising that Walter of Henley's treatise had been so much corrupted before the bishop's death in 1253 . Though this, as we shall see below, is not impossible, it appears more probable that some knowledge survived of the fact that Grossteste had written Rules for the management of an estate and household, and that the transcriber supposed this treatise to be identical with that of the Bishop of Lincoln.
(6) The MS. of Fleta in the Cottonian Collection, from which Selden printed his edition, contains very large extracts from Walter of Henley's treatise. They occur in the final chapters of the second book. The framework of this part of the work is furnished by the Seneschuncie, but this is the merest skeleton, and the largest portion of the matter is taken not from the Sencschancie but from Walter of Henley. The translator showed considerable skill in the use he made of his materials; the following table which refers to the chapters and sections in Selden's edition may be of interest as showing how the two treatises have been inter-combined. He also made use of other materials which were drawn upon by a later interpolator of Walter of Henley, but I do not know whence they were all derived : the Er tenta Manerii of the Statute Book is included.

（16）Harleian， 493 B．f． 498 ．This copy occurs in the second of two small volumes of statutes written in a fourteenth century hand．On a fly leaf of the first rolume，in a hand of the following century，is＇Per fra－ trem Johanem Lathbury Seniorem Liberetur fratribus minoribus de Redyng．＇Walter of Henley＇s treatise is in a different hand from the rest of the volume，and appears to have been transcribed from a mutilated copy．It begins， ＇Beau filz a leal gentz rous acorntez，＇and ends，＇Owe respondera par an xij．d．gelyne respondera par an iij．d．et a la fotz a iij．d．，＇and this last sentence comes immediately after the chapter on shecp．The chapter，＇coment lome despendre ses biens，＇ends abruptly＇secle＇（see below，p．6）， and the next begins at＇par lestente＇（ib．）．The rest of the MS．howerer is identical with Lansdowne，1176，and has
the peculiarities of the Reading group; it is divided by spaces left for initial letters, but only two headings are giren, ' Coment home despendre ses biens,' and ' Pur manoirs extender vous anetz aillours mais ne mye tut.'
(20) Add. 20,709. This is a curious little book, though it gives no important light on the text of Walter of Henley. It is a note book dated 1571, and belonging to William Lambarde, a celebrated antiquary of the sisteenth century, of whom an interesting account will be found in Nichols' Bibliotheca Topographica Britamnica, I. 493. He had access to a MS. belonging to Matthow Parker, entitled $D_{u}$ Guignage des terres, and made some extracts from it. This appears to have been a MS. of Walter of Henley. One of the extracts (f. 5) is stated to be from Walter of Henley; this gives the estimate about ploughing as it occurs in the Canterbury group, where the league is said to consist of twenty furlongs; it is clear, however, that this extract was not marle at the same time as the notes from Matthew Parker's Guignayp, and we are forced to surmise that two copies had been in Lambarde's hands; one of these was the lost Parker MS., which probably belonged to the Luffield group, and another was a Canterbury MS., of which a transcript and translation was made for Lamharde (see below on Oxford 21 ). Ife also made use of the anonymous Mistamtry; his extracts are very meagre, but one or two remarks are worth noting. He conjectured that the MS. he used of the Gaimmone dis terres was written in the time of Edward I. (f. 46), and he also explains ' that at the present day the bailiff retains his name, but the "provost" or Prapositus is called the reere and the clerk is the name of the Seneschal (f. 46).
(3) Heralds' College. Arundel MS. XIY. The volume in which this eopy of the treatise oceurs is described in the Preface to Gaimar's Lestoire des L'mjles (Rolls' Series).

This manuscript is closely related to the Liter Horn, and also to the MSS. of the Reading group ; it has a table of contents prefixed, which closely corresponds to that in the Liber Horn, but the headings of the chapters differ from
those in the table, and there are some curious differences in the text. In the Introduction the second English proverb is omitted, as in the Reading group. The chapter on sheep farming ends with an unfinished sentence, which does not occur in other MSS.: ‘ Beau fiz si ros berbiz ou vos agneals ke rient de semeyson unt mangie de-,

There is some difference in the divisions of the text ; the chapter on the Sursey is divided into three ; the second of the three is entitled 'Combien des acres une charue pust sustener par an,' and runs, 'E par les estendurs' (p. 6) to 'le acre de lari pyez de leese ' on p. 8. The other dirisions, beginning at ' Franc tenant' (p. 10 l. 3), 'A charue des bez' (p. 10 1.25), and ‘Al waret est une bone seson' (p.12 1. 22), correspond to those of the Reading group rather than to those of the Liber Horn. The transcriber must have combined tro texts, adopting the divisions of the Reading group, and giving his own headings to the chapters, but prefixing the Liber Horn table of contents and including the insertion on sheep farming which it contains. He, however, omitted the sentence on the amount of ploughing required on the tro methods which occurs in other examples of the Reading group.
(5) Guildhall. I was indebted to the kindness of the Torm Clerk of London for permission to examine the Liber Horn. The labours of the late Mr. Riley came prematurely to a close ; and it is most unfortunate that he was unable to carry through the work of editing this volume. The Wulter of Henley is of the time of Edward II., and the manuscript is of special value; the scribe has been much more careful about the headings of chapters and about the correct copying of figures than was usually the case. Though apparently some few years later than the Heralds' College MS., it represents an arrangement of the text which that transcriber had before him. In this case, however, the headings of the chapters and the divisions correspond to the table of contents. The MS. contains a long insertion on sheep farming and the sentence on the three field and two field s.stems.

## Oxford.

(7) Merton College CCCXXI. This is a MS. of the beginning of the fourteenth century, and is in excellent preservation. The text is similar to the Liber Horn ; the resemblances are very close, but the differences of spelling and sometimes of construction are very curious, and suggest that this MS. was written from dictation rather than copied.
(8) Bodleian Library, Douce 98. This is a beautifully written MS. of the beginning of the fourteenth century; it is practically identical with the text printed here, as the title, divisions, and headings closely correspond with those in the Luffield MS.
(17) Digby 147. This is an early fifteenth century MS., and contains a Latin translation of Walter of Henley. The text from which this translation was made appears to be connected with that of the Liber Horn group, as it has similar insertions, but the cliapter on the Survey is divided as in the Heralds' College MS. A new chapter, de modo arandi, begins at 'Ore en arrant' (p. 8 l. 12).
(21) Ramlinson MSS. B 471. This is a small volume containing rarious papers in the handwriting of William Lambarde. Among these is a transcript of Walter of Henley's treatise, with an interlinear translation. The transcript is not in Lambarde's writing, and the translation does not appear to be his either, but at the end are two notes written and signed by him. The first, dated May 2 , 1577, is: 'Hactenus ex libro ecclesiæ Christi Cantuar. perantiquo quem scriptum fuisse autumo tempestate E. 1 vel E. 2 regis'; the second, written in December of the same year, runs: 'Tradit Joannes Balæus (in centuria Scriptorum Brytanniæ quarta fol. 304) Robertum Grosseteste, Episcopum olim Lincolniensem hunc de Agricultura Libellum de Gallico in Anglicum transtulisse. Obiit antedictus Robertus ille Anno Domini 1253, qui fuit annus regni Henrici regis tertij 37. Ut vult Matthæus parisiensis. Unde satis liquet Gualterum Henleyum, militem huinsce opusculi Authorem annis abhinc 330 aut eo plus fatis concessisse. W. Lambarde Decemb. 1577.'

Some marginal notes by Lambarde are also of interest. He has remarked the mistake peculiar to the Canterbury MSS., which give the breadth of the quarentine as 40 feet, and says: 'I think this should be 4 in breadthe, and 40 in lengthe, so that this quarentine should be all one with oure small acre.' Below this in another note, 'These names of quarentine, coture, and leuge be common in the Domesday book in the Exchequier.' The word 'messer' has been translated first as 'mower,' but this has been changed to ' overseer of husbandrie,' and Lambarde notes: ‘This woord soundeth a mower, but his office was to oversee the workemen, and to kepe the cornefieldes from harme. Customes Normandie, fol. 121.'

Canterbury.
(10) Of the two MISS. in the Cathedral Library the later one has suffered considerably from damp. It is a fourteenth century MS., but it apparently follows the other copy, which is in a known hand, and has been identified as the writing of John de Gare, in the beginning of the reign of Edward I. This Canterbury MS. (2) is the source from which the British Museum MS. (12), as well as the Cambridge Unirersity MS. (11), and the Trinity College MS. (15) are derived.

Paris.
This manuscript has been fully described by M. Paulin Paris in Les Mamuserits françois de la Bibliothèque du Roi (t. iii. p. 359), and it has also been printed by Mr. Lacour, Traité inédit d'économie rurule (Paris, 1856).

It occurs in a devotional work containing illustrations of the Scriptures, and of the legends of the saints. It was written in England in the thirteenth century, and probably for a 'grande dame.' The last eight folios of the volume contain the treatise on estate management, which consists of a curious combination of the treatise of Welter of Henley and the anonymous Husbundry. At the end several other chapters are added which contain receipts and other domestic
information. I have been unable to identify their source. The compiler of this combined treatise used a copy precisely similar to the original of the Liber Horm. The headings of the chapters in the Liber Horn are here incorporated in the text at the beginning of each chapter, and the clerk added new headings of his own. The sentence about the cost of working the two field and three field system is omitted, howerer. ${ }^{1}$

The re-arrangement has been effected without any great skill, and it is not easy to trace the reasons for the rearrangement. The chapters run as follows:-

| Paris | Walter of Henley | Anonymous | Paris | Walter of Henles | Anonymous |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | p. 2 |  | 18 | p. 18 |  |
| 2 | p. 2 |  | 19 | p. 18 |  |
| 3 | p. 4 |  | 20 | p. 22 |  |
| 4 | p. 10 |  | 21 |  | p. 78 |
| 5 |  | p. 60 | 22 | p. 22 |  |
| 6 |  | p. 62 | 23 |  | p. 78 |
| 7 |  |  | 24 | p. 26 |  |
| 8 | p. 6 |  | 25 |  | p. 76 |
| 9 | p. 8 |  | 26 |  | p. 78 |
| 10 | p. 12 |  | 27 |  | p. 79 |
| 11 | p. 10 |  | 28 |  | p. 74 |
| 12 | p. 10 |  | 29 | p. 28 |  |
| 13 |  | p. 60 | 30 | p. 30 |  |
| 14 |  | p. 70 | 31 | p. 28 |  |
| 15 |  | p. 72 | 32 | p. 4 |  |
| 16 |  | p. 66 | 33 | p. 32 |  |
| 17 | p. 16 |  |  |  |  |
| The last nine chapters in Lacour are unidentified. |  |  |  |  |  |

Besides the abore MSS., all of which have been examined, there are several others which came to my knowledge so recently that I have not been able to take them into account in the foregoing remarks, and I have no doubt that there are many others in private collections or elsewhere. The following may be mentioned :-

Collection of William W. E. Wymne, Esq., Peniarth, Merionethshire, No. 92. Translation of Walter of Henley's Husbandrie, attributed to Grosseteste. Historical MISS. Commission, Report II. app. 106.

[^11]Collection of the Duke of Northumberland, Syon House. D. x. 1 f. 45. Historical MSSS. Commission, Report VI. app. 244 .

Collection of Sir A. Acland-Hood, St. Audries, Somersetshire. Historical MSS. Commission, Report VI. app. 345.

Bodleian Library. Ashmolean MS. 1524. A fourteenth century copy, but very imperfect. Mr. Black in the catalogue of these MSS. suggests that this is more nearly the original of the Digby version than the Heralds' College MS., but it is so fragmentary that there is difficulty in speaking decidedly.

There is also a copy in Welsh, British Museum, Add. 15056, transcribed by Jolo Morganwg, alias Edward Williams, from a book of Thomas Hopein, intitled 'Cato Cymraeg.'

I have also come on traces of several MSS., which appear to have been lost or destroyed in comparatively recent times.

Parker's MS., entitled Gaynage de terres, and used by William Lambarde, cannot be found among the Archlishop's books. A considerable portion went to Corpus Christi College, Cambridge, others to the University, and others to Lambetl, but I cannot hear of this MS. at any of these libraries.

There was also a Latin translation in a Syon College book, which was formerly in the possession of Magdalene College, Oxford, but of which I can find no traces. It commenced 'Pater aetate decrepita' according to Pegge (Life of Grusseteste, p. 285), and must therefore have been a different translation from that in the Digby collection, which begins ' Pater jacet in senectute.'

As a study in the process of the corruption of an author's text, the examination of these MSS. is of considerable interest. What is most remarkable is the evidence that in the thirteenth century, when the treatise was new and had no established reputation, it was found useful, and obtained a considerable circulation, but it was treated with scanty respect by the transcribers. John de Gare altered the
passage about the leagues to suit some local usages; the Liber Horn represents a copy which was corrupted by the insertion of the passage on sheep farming; the Luffield scribe omitted the calculations about the two field system. The copy prepared in the thirteenth century for a noble lady was recklessly mutilated, interpolated, and rearranged, and the author of Fleta was unscrupulous in his mode of quotation. But, fortunately, some early MS. survived untampered with, and this was more carefully dealt with by the transcribers of the Reading group in the fourteenth and fifteenth centuries.

For the present edition the Luffield MS. has been selected on three grounds: (1) Alone among the early Miss. it does not appear to have any interpolations. (2) The text is divided as it is in by far the greater number of MSS., and in the earliest MSS., for in this matter the Reading group stands alone. (3) The peculiarities of the language in which it is written give it additional interest.
4. It is unnecessary to say much of the editions of Walter of Henley. The author has been badly treated by those who have printed his work, as in no case has it been issued under his orn name.

The earliest edition was the English translation issued by Wynkyn de Worde ; a copy, said to be umique, is in the University Library at Cambridge, but is undated. It must have been printed from a MS. which was very closely connected with the one preserved in the Sloane collection ; it has the same title, ascribing the translation to Grosseteste; it has similar divisions and headings. It is immediately followed both in the MS. and in the printed copy by a tract on the Planting and Graftiny of Trees, adapted and translated from Palladius. At the same time there are so many minor differences of spelling and language that we cannot suppose that Wynkyn de Worde printed from the MS. still preserved.

Selden's edition of Fleta, containing long extracts from Walter of Henley, was published in 1647; it does not seem
necessary to add anything to what has been already said about the MS. of this work (6).

In 1856 M. Louis Lacour printed as a Traité inédit d'conomie rurale the Paris MS. of Waiter of Henley and the anonymous Husbandry combined. The present is the first edition which attempts to give this celebrated treatise in its original shape; the later additions have, of course, an interest of their own, and these, as well as the tracts with which Walter of Henley's was confused, are now rendered available.

## IV. <br> THE ANONYMOUS HUSBANDRY.

While little can be said about the date and authorship of Walter of Henley's treatise, we have no indication at all in regard to this anonymous work, except that it had been written in time for John de Gare to transcribe it at Canterbury. It enjoyed a smaller circulation in all probability than the other, but it was treated as a practical work which it was well to possess in a handy form. The present edition has been printed, not from a book, but from a roll in S. John's College, Cambridge, which is precisely similar in shape and appearance to the rolls in which the bailiffs kept their accounts. It measures seven feet four inches long, and is about six inches wide. The hand is of the early part of the fourteenth century.

It also occurs in conjunction with Walter of Henley's treatise in the book in the Cambridge University Library marked Hh. iii. 11 f .1653 , but in a later hand than the transcript of Walter of Henley in the same book (11). It is found in the two Canterbury MSS. (2 \& 10) and in the British Museum, Add. 6159, f. 217 (12) ; also in the Merton College MS. (7), and at Paris (1). The fact that the compiler of the Paris MLS. had before him all the materials which occur in the Merton MS., and used a similar arrangement of Walter of Henley, may indicate a
close connexion between these copies. It appears that, though the number of MSS. is small, we can trace them to more than one distinct centre of transcription.

A rery curious part of this treatise is the table for reducing acres based on poles of 18,22 , or 24 feet to acres based on a pole of 16 feet. ${ }^{1}$ This must hare been a difficult sum to work out, and it is to the author's credit that his arithmetic is correct, though he had evident difficulty in the addition of fractions, and expresses 1 acre $3 \frac{9}{16}$ roods by the cumbrous form 'cne acre and a half and a rood and a half and the sixteenth of a rood.' After all, his results give only a very rough approximation, for the recognised pole, as defined by statute, was not 16 feet but $16 \frac{1}{2}$. The accurate calculation involving a square perch of $30 \frac{1}{4}$ yards was probably too much for the author to attempt, and he solved the difficulty by understating the length of the statute pole; but it may be that a pole of 16 feet was used in his part of the country.

## V.

SENESCHAUCIE.
There is no indication, so far as I am arrare, that enables us to identify the author of the Seneschancic, or to assign its date with any exactness. As already stated, it furnished the scheme for some chapters of Fleta, and it cannot therefore be later than the time of Edward I.; it also occurs in a MS. in Cambridge marked Mm. i. 27 f. 133, which must be assigned to the same reign. This is a quarto on parchment containing a Registrum Brecium, a collection of statutes, proclamations, an assise of breads of the time of King Johm, and many other documents. This work also occurs in the same hand as Walter of Henley in the Lilur Horn, Dd. vii. 6 f. 50b, at Cambridge, and also in the same hand as the anonymous IHusbandry in the fifteenth century Cambridge University MS. (Hh. iii. 11 f. 167 bis) which contains all these three treatises.

There are also two very imperfect copies, one at Cambridge marked Dd. ix. 38 f. 2491 , and one in the British Museum marked Add. 5762. The curious diversity of arrangement which is found in these different copies can be best exhibited in tabular form.

## VI.

GRosseteste's rules.
The occasion for the writing of Grosseteste's Rules has been so clearly discussed by Pegge that it is unnecessary to do more than state the results at which he has arrived.
'John Laci, Earl of Lincoln, a person who had a great share in the ling's comnsel, died July 22, 1240; and Margaret, his dorrager, "had the manors of Ingoldemers, Throseby, Houton, and Seggebrock, assigned by the king for her maintenance, untill her dowry out of her late husband's lands should be set forth." She afterwards married Waiter Marshall, Earl of Pembroke, 1242. And if that piece of Bishop Grocceteste's intituled " Regula quas bonse memorire Rob. Grosseteste fecit comitisse Lyncolnire ad custodiendum et regendum terras, hospitium domum et familiam," was written for the service of this lady in her widowhood, it must have been composed 1240 or 1241 . Robert had been but a few years then in his see, but perhaps there might be a family acquaintance and friendship in the case, John Laci having been constahle of Chester,
where the bishop had been archdeacon. Margaret, again, was danghter of Robert Quinci, eldest son of Saer, Earl of Winchester, and Hawise, fourth sister of Ranulph, last Earl of Chester of that name, in whose time Grosseteste had been archdeacon there, and intimate probably in the family; and on this supposition his lordship's respect and veneration for the mother might naturally be transferred upon the daughter.' '

Of these Rules I have seen four manuscripts in French, and one in Latin. They were also translated into English, and some portions of them have been published by Mr. Brewer in the Mommenta Franciseana, rol. I. app. ix. ${ }^{2}$ The trans. lator had, however, fallen into an error which Mr. Brewer has not corrected. They were probably entitled Reules S. Roberd, and the trimslator supposed that they were rules laid down by the Bishop of Lincoln for the management of his own household and estates, whereas they appear to have been adrice tendered to the Countess of Lincoln. It is of course possible that he had rules for his own honsehold, and communicated a copy of these rules to the Countess, and that the English translation follows the bishop's rules, while the French copy here printed consists of his advice. But on the whole it seems more probable that it was a mere error on the part of the translator.

The manuscripts are as follows:
Bodleian, Douce MSS. 98 f. 128.-Tinis copy occurs in the same volume as the treatise of Walter of Henley, and is written in the same hand ; it is the one now printed.

Digby, 204 f .3 . -This is a Latin translation in a late fifteenth century hand. It begins 'Hic incipiunt regule quas bone memorie Robertus $\mathrm{G}[\mathrm{r}]$ ossetete fecit comitisse Lincohniensi ad custodiendum et regendum terras osspitiun ct domum et familiam.' The numbers and titles of the Relles: are not given, and the last few are wanting.

British Museum. Harl. MSSS. 273 f. 81.-This volume begins with a kalendar and the Psalter in French, and most

[^12]of the contents are religious works. The copy of the Rules corresponds very closely with that in the Douce collection. It begins 'Ici cumencent les reules qe Robert Grosteste euesqe de Nichole fist a la cumtesce de Nichole.' The scribe has been puzzled with the calculations as to the expenditure of corn (see below, p. 127). He writes 'e ci uos despendez ij quarters le iour ce sunt xiiij la simeine ceo sunt vij cenz e x' -and here a blank space has been left, which in another hand has been filled in to make xxviij. The copy goes on ' e ci ros despendez chescun ior pur acrestre uotre aumoine ij quarters e demi ceo sunt en la symeine xvij quarters e demi en lan'-and here a blank space of a line and a half has been left; another hand has added 'ce serra ix ${ }^{c}$ quarters.' These calculations are omitted in the Latin. This MS. has been used to correct the text.

Add. 5762 f. 136.-This copy is in an early fourteenth century hand, and has a rmming title 'Compositio Manerii.' The headings to the rules are not given ; in fact, there are no divisions of any kind. The names of Grosseteste and of the Countess of Lincoln do not appear in this copy ; the treatise begins, 'Cest escrit vos aprent coment seygnur ou dame purra sauer en chescon maner totes les terres par lur parceles, totes ces rentes, custumes, seruages, vsages, franchises, feez \& ses tenementz.' The passage containing the calculations runs thus: 'Si ros despendetz deus quaters le jour ceus sunt quatortze quarters la simayne ceus sunt D.C.C. xxriij quarters par an. E si vos despendetz chescon jour pur encrestre rotre aumoyne deus quarters e demy ceus sunt en la symaine xrij quarters e demy ceus sunt D.C.C. liiij [sic] quarters par an.'

Sloane MSS. 1986.-This fragment in English is printed as the supplement.

Canterbury.-This is an imperfect copy, in the form of a roll ; but the first membrane has been lost, so that it commences in the middle of the serenteenth Rule. It is in beautiful preservation, in a thirteenth century hand, and might even have been transcribed during the author's life; the Rules are given, but without titles.

# LE DITE DE HOSEBONDRIE 

$\qquad$
WALTER DE HENLEY

## LE DITE DE HOSEBONDRIE.

Ce est le dite de hosebondrie ke vn sage homme fist iadis ke auoyt a non syre Walter de henle. Wos neet rne gens ke rat teres e tenemens e i ne seuent

## HUSBANDRY.

This is the treatise on husbandry that a good man once made, whose name was Sir Walter of Henley; and this he made to teach those who have lands and tenements and may not know how to keep all the points of husbandry, as the tillage of land and the keeping of cattle, from which great wealth may come to those who will hear this teaching and then do as is found written herein.

The father having fallen into old age said to his son, Dear son, live prudently towards God and the world. With regard to God, think often of the passion and death that Jesus Christ suffered for us, and love Him above all things and fear Him and lay hold of and keep His commandments; with regard to the world, think of the wheel of fortune, how man mounts little by little to wealth, and when he is at the top of the wheel, then by mishap he falls little by little into poverty, and then into wretchedness. Wherefore, I pray you, order your life according as your lands are valued yearly by the extent, and nothing beyond that. If you can approve your lands by tillage or cattle or other means beyond the cxtent, put the surplus in reserve, for if corn fail, or cattle die, or fire befall you, or other mishap, then what you have saved will help you. If you spend in a year the value of your lands and the profit, and one of these chances befall you, you have no recovery except by borrowing, and he who borrows from another robs himself ; or by making bargains, as some who make themselves merchants, buying at twenty shillings and selling at ten. It is said in the proverb, 'Who provides for the future enjoys himself w the present.' You see some who have lands and tenements and know not how to live.
pas riure pur quey? io le wos dirray pur coe ke eus vinent santz ordinance fere e purueyance auant mayn e despendent e gastent plus ke lur teres valent par an e kant il vnt degastes lur bens adone ne vnt fors ke de mayn en gule e viuent en angoysse ne cheuisance ne puent fere ke bon lur seyt. Hom dit en reprouer en engleys wo pat strechet forperre pan his wytel wyle reche in pe straue his fet he mot streche. Beau fitz sages seez en vos fes e cuntregeytet le secle ke tant est wyschous e catillous.

Atort de nului chose ne eyet ne encheson nequeret uers nully pur se bens auoyr kar hom dit en englyse On jeer oper to wroge wylle on honde go. Ant euere aten hende wrong wile wende. Si le gens chent en vos cours ke il seyent amercyetz par lur pers si vostre conscience vos dye ke eus seyent trop haut amerciez ke vos la amenuset issi ke vos ne seyet repris issi ne deuant deu. Alele genz vos acoyntes e amour de vos ueysins eez kar hom dit en franceys ki a bon veysyn si a bon matin. Vostre bouche sagement gardet ke vos par resun ne pusset estre repris.
[Coment hom deit despendre les biens ke deus luy ad Done.] ${ }^{1}$

Les bens ke deu vos preste sagement les gardet e despendet. En mises e en despenses deuet sauoyr quatre choses. Le vn est quant vos deuet doner coment e a ki e combyen. Le primer ke doynnet auant ke vos eez abosoyner kar meus raudrunt ij s . deuant ke x quant hom abosoyner. Le secund si vos denet doner ou despenses fere les facet de bone volunte e donc vos serra la chose alowe an double. E si vos donet recreaument vos perderet kant que vos imetes. Le tertz a cely donet ke vos purret valer e greuer. Le quart comben vos deuet doner ne plus ne meyns ke solum coe ke la persone est e solom ceo

[^13]Why? I will tell you. Because they live without rule and forethought and spend and waste more than their lands are worth yearly, and when they have wasted their goods can only live from hand to mouth and are in want, and can make no bargain that shall be for their good. The English proverb says, 'He that stretches farther than his whittle will reach, in the straw his feet he must stretch.' Dear son, be prudent in your doings and be on your guard against the world, which is so wicked and deceitful.

Have nothing from anyone wrongfully, nor seek occasion towards anyone to have his goods, for it is said in the English proverb, ' One year or two, wrong will on hand go, and ever at an end, wrong will wend.' If anyone comes into your court, let him be amerced by his peers; if your conscience tells you that they have amerced him too highly do you lessen it, so that you be not reproved here or before God. Acquaint yourself with true men and have the love of your neighbours, for it is said in the French proverb, 'Who has a good neighbour has a good morrow.' Keep your mouth prudently, that you be not justly reproved.

How a man ought to spend the wealth that God has given him.

The wealth that God lends you keep and spend prudently. In outlays and expenses you must know four things. The one is, when you ought to give, how, to whom, and how much. The first is, that you give before you are obliged to, for how much more shall two shillings be worth beforehand than ten when one is forced to give. The second is, if you must give or spend, do it with good will, and it shall be reckoned double to yon, and if you give grudgingly you shall lose as much as you put out. The third is, give to him who can help and hurt you. The fourth is, how much you onght to give, neither more nor less than according to the person, and according as the business is small or
ke la bosoyne est petite ou grande ke vos auet de ly afere. Les poueres regardet ne mye pur loenge auoyr del secle mes pur loenge auoyr de deu ke vos tot troue.
[Estentendez vos terres e vos tenemens par vos gens iUREy.] ${ }^{1}$
Vos teres e vos tenemens estendet par vos leaus gentz iures. Primes estendet Cours Gardyns Columbers Cortilages ceo kil poent ualer par an outre la prise. E puy kantes acres sunt en demeyne e comben est en chescune coture e quey purrunt valer par an. ${ }^{2}$ E quantes acres de pasture e quey valent par an. E totes autres pastures seuerales e quey valent par an. E boys ceo ke vos poez vendre sanz wast e sanz destruction e quey put valer par an outre la reprise. E francs tenans comben ${ }^{3}$ checun tent e par queu seruice. E custumers comben checun tent e par queus sertuises e custumes en deners seyent mys. E touz autres choses certeynes metez ceo ke il poent valer par an. E par les estendurs enqueret de comben hom pora semer vn acre de tere des touz maneres des bles. E combien de estor vos porret auer de sur checun manere. Par lestente purret sauoyr combyen ros teres valent par an par quey vos purret ordiner rostre uie sicum vos ay auant dit. Estre ceo si vos baylifs dient, ou vos prouos en lour acounte tant de quarters semes sur tant des acres alet ale estente e par chance ros troueret mey des acres ke eus ne vos dient. E plus des quarters semez ke mester ne fust kar ros auet a la fin de le estente de comben hom porra semer un acre de tere de touz maneres des bles. Estre ceo si mester seyt demetre plus coustages en charues ou meyns par le estente serret sertifye. Coment? io le vos diray. Si vos teres sunt partes en treys lune partye a yuernage e lautre partye a quaremel e la terce partye a waret donc est la charue de

[^14]great that you have to do with him. Hare regard to the poor, not to have praise of the world, but to have praise of God, who finds you all.

Survey your lands and tenements by your storn men.
Survey your lands and tenements by true and sworn men. First survey your courts, gardens, dove-houses, curtilages, what they are worth yearly beyond the raluation; and then how many acres are in the demesne, and how much is in each cultura, and what they should be worth yearly; and how many acres of pasture, and what they are worth yearly ; and all other several pastures, and what they are worth yearly ; and wood, what you can sell without loss and destruction, and what it is worth yearly beyond the return; and free tenants, how much each holds and by what service; and customary tenants, how much each holds and by what services, and let customs be put in money. And of all other definite things put what they are worth yearly. And by the surreyors inquire mith how much of each sort of corn you can sow an acre of land, and how much cattle you can have on each manor. By the extent you should be able to know how much your lands are worth yearly, by which you can order your living, as I have said before. Further, if your bailiffs or prorosts say in their account that so many quarters have been sown on so many acres, go to the extent, and perhaps you shall find fewer acres than they have told you and more quarters sown than was necessary. For you have at the end of the extent the quantity of each kind of corn with which one shall sow an acre of land. Further, if it is necessary to put out more money or less for ploughs, you shall be confirmed by the extent. How? I will tell you. If your lands are divided in three, one part for winter seed, the other part for spring seed, and the third part fallow, then
tere ix $^{x x}$ acres. $E$ si vos teres sunt party on deus com sunt en plusurs pays lune meyte seme a yuernage e a quaremel e lautre meyte a waret adonc serra la charue de tere viij ${ }^{\text {xx }}$ acres. Alet ale estente e veet comben des acres vos auet en demeyne e la purret estre sertefie. ${ }^{1}$

Acune gent dirrunt ke la charue ne put pas sustenir par an viij ${ }^{x x}$ acres ne ix ${ }^{x x}$ acres. ${ }^{2} E$ io ros mustray ke si put. [Byen sauet ke vne coture deyt estre de quarante perches de long, e iiij perches de lee. E la perche le rey est de xri pez e demi e adonc est le acre de lxrj pyez de leyse. Ore en arrant alet axx ${ }^{3}$ foys entur pur fere le reon plus estreyt e kant le acre ert pararre a donkes estes ale lxxij coutures ke sunt vj lywes kar ceo fet asanoyr ke xij cotures sunt rne lywe.] ${ }^{4}$ Mout sereyt poure le cheval ${ }^{5}$ ou le boef ke ne put aler du matyn belement le pas iij ${ }^{6}$ lywe de voye de son rescet e retorner a nome. E par autre reyson vos moustruy io ke ele put ben tant fere. Byen sanet ke il y a en lan lij semaynes ore ostet viij semaynes pur feyretz e pur autres desturbances ${ }^{7}$ a donc demorent xliiij semaynes ouerables. E en tot cel tens nanera la charue a fere a larrue de waret e alarrure de semaysl de yuernage e de quaremel fors ke a la iornee iij rodes e demy rode e au rebyner un acre. ${ }^{8}$ Ore veet si vne charue ke fust adreyt garde e sywy si ele ne pust tant fere a la iornee. E si uns auet tere ou estor put estre metet peyne de estorer le solum ceo ke la tere de-

[^15][^16]is a ploughland nine score acres. And if your lands are divided in two, as in many places, the one half sown with winter seed and spring seed, the other half fallow, then shall a ploughland be eight score acres. Go to the extent and see how many acres you have in the demesne, and there you should be confirmed.

Some men will tell you that a plough cannot work eight score or nine score acres yearly, but I will show you that it can. You know well that a furlong ought to be forty perches long and four wide, and the king's perch is sixteen feet and a half; then an acre is sixty-six feet in width. Now in ploughing go thirty-six times round to make the ridge narrower, and when the acre is ploughed then you have made seventy-two furlongs, which are six leagues, for be it known that twelve furlongs are a league. And the horse or ox must be very poor that cannot from the morning go easily in pace three leagues in length from his starting-place and return by three o'clock. And I will show you by another reason that it can do as much. You know that there are in the year fifty-two weeks. Now take away eight weeks for holy days and other hindrances, then are there forty-four working weeks left. And in all that time the plough shall only have to plough for fallow or for spring or winter sowing three roods and a half daily, and for second fallowing an acre. Now see if a plough were properly kept and followed, if it could not do as much daily. And if you have land on which you can have cattle, take pains to stock it as the land requires. And know for truth if you
mande. E sachet pur royrs si vos estes ben estore e votre estor seyt garde e gwye, il respondra al terz de la tere par estente. Franc tenant ou custumers si eus dedient seruices ou custumes a lestente verret la certeynte.

## De sauoyr eslyre vos serianz.

Si baylyf ou seriant deuet eslyre ne les elyset pur parente ne pur especiaute ne autres si il ne seyent de bon renon e ke il seyent leauz e auertitz e ke eus sachent de estor e de gaynage. Ne prouez ne messers ne neet fors de vos hommes demeyne si vos les eet e ceo par election de ros homages kar si eus trespassent de eus aueret recoueryr.

## De suruer yos oueraynnes.

Al commencement de wareter e de rebyner e de semer ke le baylyf e le messer ou le prouost seyent enterement oue les charues a neer ke eus facent ben e plenerement lur ouerayne. E a la fin de la iornee reent comben eus ount fet e de taunt respoynent checun ior apres si eus ne sachent demoustrer certeyne deturbance. E pur ceo ke serianz de custume relinquissent en lur ouerayne il est mester de contrewayter lur fraude. Estre ceo il est mester ke hom ${ }^{1}$ les sourueye sonent. ${ }^{2} \mathrm{E}$ de autre part le baylyf deyt sourueyer touz ke eus ben facent. E ci eus ne facent ben ke eus seyent repris. ${ }^{3}$

A charue des bez od deus cheuaus ros treet plus tot ke a charue tut de chenaus si la tere ne seyt si perouse ke buefs ne se pussent eyder des pes pur quey? Io le ros diray le cheual custe plus ke le buef. Estre ceo la charue des buefs irra atant en lan come la charue des cheuaus pur ceo ke la malyce des charuers ne suffrent mye la charue ${ }^{4}$ aler hors del pas nent plus ke la charue des buefs.

[^17]are duly stocked, and your cattle well guarded and managed, it shall yield three times the land by the extent. If free tenants or customary tenants deny services or customs you will see the definite amount in the extent.

## To kNow how to select servants.

If you must choose a bailiff or servant, do not choose them for kindred or liking, or other reasons, if they are not of good reputation, and let them be true and prudent and know about cattle and tillage. Have no provosts or messers except from your own men, if you have them, and that by election of your tenants, for if they do wrong you shall have recovery from them.

## Of overseeing your labourers.

At the begimning of fallowing and second fallowing and of sowing let the bailiff, and the messer, or the provost, be all the time with the ploughmen, to see that they do their work well and thoroughly, and at the end of the day see how much they have done, and for so much shall they answer each day after unless they can show a sure hindrance. And because customary servants neglect their work it is necessary to guard against their fraud; further, it is necessary that they are overseen often ; and besides the bailiff must oversee all, that they all work well, and if they do not well let them be reproved.

With a team of oxen with two horses you draw quicker than with a team all horses, if the ground is not so stony that oxen cannot help themselves with their feet. Why? I will tell you : the horse costs more than the ox. Besides a plough of oxen will go as far in the year as a plough of horses, because the malice of ploughmen will not allow the plough [of horses] to go beyond their pace, no more than the plough of

Estre ceo en graunt duresce la ou la charue des cheuaus serra arestu la charue des befs passera. E le volet vos veer comben le cheual couste plus ke le buef? Io le vos dyray. Custume est edreyt ke bestes des charues seyent a la creche entre la feste de seynt luc e la feste de la seyt croys en may par tint e cynk semeynes. E si le cheual deyt estre enpoynt pur fere sa iornee il ly couent auer al meyns la nut le sime part de rn bussel de aneyne le pris de mayle e al meyns duze derees de herbage en este. [^18]oxen. Further, in very hard ground, where the plough of horses will stop, the plough of oxen will pass. And will you see how the horse costs more than the ox? I will tell you. It is usual and right that plough beasts should be in the stall between the feast of St. Luke and the feast of the Holy Cross in May, five-and-twenty weeks, and if the horse is to be in a condition to do his daily work, it is necessary that he should have every night at the least the sixth part of a bushel of oats, price one halfpenny, and at the least twelve pennyworth of grass in summer. And each week more or less a penny in shoeing, if he must be shod on all four feet. The sum is twelve shillings and fivepence in the year, without fodder and chaff.

How you must heep your oxen.
And if the ox is to be in a condition to do his work, then it is necessary that he should have at least three sheaves and a half of oats in the week, price one penny, and ten sheaves of oats should yield a bushel of oats in measure; and in summer twelve pennyworth of grass : the sum three shillings, one penny, without fodder and chaff. And when the horse is old and worn out then there is nothing but the skin; and when the ox is old with ten pennyworth of grass he shall be fit for the larder, or will sell for as much as he cost. April is a good time for fallowing, if the earth breaks up after the plough ; and for second fallowing after St. John's Day, when the dust rises behind the plough; and for ploughing for seed when the earth is firm and not too cracked. But he who has much to do cannot wait for all the good seasons. And when you fallow, if you find good earth deep down, then plough a square ridge, to let the good land rest, but do not cut off the bad land; and plough cleanly, so that none remains covered or uncovered. At second fallowing do not go too deep, but so that you can just destroy the thistles, for if the earth is ploughed too deep at second fallowing, and the earth is full of water, then when one must plough for sowing the plough shall reach no sure ground, but

E si la charue puet aler ii deyes plus parfount ke la tere ne fust rebyne adonc trouereyt la charue certeyne tere e se nettireyt e delyuerreyt de bowe e freyt belle arrure e bon.

## De tenyr le reon.

Al semer ne alet ${ }^{1}$ mye large reon fors ke petit e ben ioynt ensemble ke la semence pusse cheyr owel. E si vos arret large reon pur ben espleyter vos fret damage. Coment? io ros dirray quant la tere ert seme donc vendra la herce e sakera le ble iekes en les croes ke est entre les deus reons e le reon ke est large serra descouert ke ren ny crester du ble. E le volet vos reer? quant le ble est de suz terre alet au chef ${ }^{2} \mathrm{e}$ ros rerret ke io ros dy voyre. E la terre ke deyt estre seme de sus reon ueet ke il seyt arre de menu reon e la terre en hauce tant com vos purret. E ueet ke le reon ke est entre les deus seylloyns seyt estreyt. E la tere ke gyst come ceo fust vne crest en cel reon de souz le pye senestre apres la charue ke seyt reuerse e adonc serra le reon asset estreyt.

## De semer vos teres.

Vos terres semet par tens issi ke la terre seyt assys e les bles en racines auant le fort yuer. Si auenture aueyne ke un grant pluye reyne ou chete sur la tere de denz les viij iours ke ele seyt seme e pus reyne rn aspre gele e se teyne deus iors ou treys si la tere seyt croez le gele percera la tere tant parfount come le ewe entre e par tant le ble ke est germy e tendre mut serra pery. Deus maneres teres ke sunt al quaremel semet par tens tere arzilouse e tere perouse pur quey? io le vos dirray. Si la seson seyt sek en le tens de marz dune
${ }^{1}$ arrer. $\quad$ [de la cotere e regardez le ble uers lautre chef.]
goes floundering, as in mud. And if the plough can go two finger-lengths deeper than at second fallowing, then the plough will find sure ground, and clear and free it from mud, and make fine and good ploughing.

## To keep the ridge.

At sowing do not plough large furrows, but little and well laid together, that the seed may fall evenly; if you plough a large furrow to be quick you will do harm. How? I will tell you. When the ground is sown, then the harrow will come and pull the corn into the hollow which is between the two ridges, and the large ridge shall be uncovered, that no corn can grow there. And will you see this? When the corn is above ground go to the end of the ridge, and you will see that I tell you truly. And if the land must be sown below the ridge see that it is ploughed with small furrows, and the earth raised as much as you are able. And see that the ridge which is between the two furrows is narrow. And let the earth which lies like a crest in the furrow under the left foot after the plough be overturned, and then shall the furrow be narrow enough.

## To sow your lands.

Sow your lands in time, so that the ground may be settled and the corn rooted before great cold. If by chance it happens that a heavy rain comes or falls on the earth within eight days of the sowing, and then a sharp frost should come and last two or three days, if the earth is full of holes the frost will penetrate through the earth as deep as the water entered, and so the corn, which has sprouted and is very tender, will perish. There are two kinds of land for spring seed which you must sow early, clay land and stony land. Why? I will tell you. If the weather in March should be dry, then the ground will harden too much and
en durcist la tere ${ }^{1}$ trop e la tere perouse se ensechit mes ele ouert par quey il est mester ke ceste teres seyent par tens semes issi ke les bles pussent estre noriz par la seue de iuer.

## Pur delyuerer teres de cretyne.

Les teres creyous e sabelous nest pas mester de semer si par tens kar ceo sunt deus dereyus ke sunt eschiouz de estre reuerse en grant moysture mes al semayl ke la tere seyt in poy arose. E quant vos teres sunt semes les teres de mareys e les teres ewouses les fetes ben reoner e le cours del ewe fetes coure ${ }^{2}$ issi ke les teres de ewe se pussent delyueryr. ```

the stony ground become more dry and open, so it is necessary that such ground be sorn early, that the corn may be nourished by the winter moisture.

## To free lands from too much water.

Chalky ground and sandy ground need not be sown so early, for these are two evils escaped to be orerturned in great moisture, but at sowing let the ground be a little sprinkled. And when your lands are sown let the marshy ground and damp ground be well ridged, and the water made to rum, so that the ground may be freed from water. Let your land be cleaned and weeded after St. John's Day; before that is not a good time. If you cut thistles fifteen days or eight before St. John's Day, for each one will come two or three. Let your corn be carefully cut and led into the grange.

To make the issue of the grange.
When the stock of the grange is taken, place there a true man in whom you trust, who can direct the provost rightly, for one often sees that the grange-keeper and barnkeeper join together to do mischief. Make your prorost and barn-keepers fill the measures, so that for every eight bushels a cantle shall be left for the waste which takes place at the putting in and taking from the barn, for in the comble is fraud. How? I will tell you. When the provost has rendered account for the return of the grange, then cause the bushel which he filled with to be proved. If the bushel be large then four heaped up will make fise, more or less; if it be smaller five will make six; if smaller six will make seven ; if still smaller cight will make nine, and so on for each, more or less. Now some of these provosts will only render account for eight in the seam, whether the bushel be large or small,
seyt large il ia deseyte grant. Si lissue de votre grange ne resporne fors al ters de votre semayl vos ny gaynet ren si ble ne se vende byen.

E votre berchere facet checune quinseyne marler de terre arzylouse on de bone tere cum

[^19]and if the bushel be large there is great deceit. If the return of your grange only yields three times the seed sown you will gain nothing unless corn sells well.

For how much you shall sow an acre.
You know surely that an acre sown with wheat takes three ploughings, except lands which are somn yearly; and that, one with the other, each ploughing is worth sixpence, and harrowing a penny, and on the acre it is necessary to sow at least two bushels. Now two bushels at Michaelmas are worth at least twelvepence, and weeding a halfpenny, and reaping fivepence, and carrying in August a penny; the straw will pay for the threshing. At three times your sowing you ought to have six bushels, worth three shillings, and the cost amounts to three shillings and three halfpence, and the ground is yours and not reckoned.

## How you ought to change your seed.

Change your seed every year at Nichaelmas, for seed grown on other ground will bring more profit than that which is gromn on your own. Will you see this? Plough two selions at the same time, and sow the one with seed which is bought and the other with corn which you have grown : in August you will see that I speak truly.

How you ought to heep and prepare manure.
Do not sell your stubble or take it from the ground if you do not want it for thatching ; if you take away the least you will lose much. Good son, cause manure to be gatherci in heaps and mixed with earth, and cause your sheepfold to be marled every fortnight with clay land or with good earth, as the cleansing out of ditches, and then strew it orer.
descurement de forsses e pus estramer sure. E si forge demurge outre la prise de sustenance de votre estor le facet estramer dedens la curt e de hors en wascels. E si vos metet vos fens sur waret il serrunt tut le plus an rebyner reuerse
I [ou.]

And if fodder be left beyond that estimated to keep your cattle cause it to be strewed within the court and without in wet places. And your sheep-house and folds also canse to be strewed. And before the drought of Narch comes let your manure, which has been scattered within the court and withont, be gathered together. And when you must cart marl or manure have a man in whom you trust to be over the carters the first day, that he may see that they do their work well and without cheating, and at the end of the day's work see how much they have done, and for so much must they answer daily unless they are able to show a definite hindrance. Put your manure which has been mixed with earth on sandy ground if you have it. Why? I will tell you. The weather in summer is hot, and the sand hot and the manure hot; and when these three heats are united after St. John's Day the barley that grows in the sand is withered, as you can see in several places as you go through the country. In the evening the earth mixed with manure cools the sand and keeps the dew, and thereby is the corn much spared. Manme your lands, and do not plough them too deeply, because manure wastes in descending. Now I will tell you what advantage you will have from manure mixed with earth. If the manure was quite by itself it mould last tro or three years, according as the ground is cold or hot ; manure mixed with earth will last twice as long, but it will not be so sharp. Know for certain that marl lasts longer than manure. Why ? Because manure wastes in descending and marl in ascending. And why will manure mixed last longer than pure manure? I will tell you. Of manure and the earth which are harrowed together the earth shall keep the manure, so that it camont waste by descending as much as it mould naturally. I toll you why, that you may gather manure according to your power. And when your manure has heen spread and watered a little, then it is time that it should be thond orer ; then the earth and the manure will pofit much together. And if rou spread your mamme at fallowins it shall be all the more tumed over at seomed plonghing, and
desouz tere e au semayl regete ${ }^{1}$ amount e od la tere medle. E si il mys sur le rebyner au semayl est tot le plus de souz tere ${ }^{2}$ epoy medle one la tere e ceo nert pas prou. at sowing shall come up again and be mixed with earth. And if it is spread at second ploughing at sorring it is all the more under the earth and little mixed with it, and that is not profitable. And the nearer the fold is to the sowing the more shall it be worth. At the first feast of our Lady enlarge your fold according as you have sheep, either more or less, for in that time there is much manure.

How you ought to inspect your cattle.
Sort out your cattle once a year between Easter and Whitsuntide-that is to sary, oxen, cows, and herds-and let those that are not to be kept be put to fatten; if you lay out money to fatten them with grass you will gain. And know for truth that bad beasts cost more than good. Why? I will tell you. If it be a draught beast he must be more thought of than the other and more spared, and because he is spared the others are burdened for his lack. And if you must buy cattle buy them between Easter and Whitsuntide, for then beasts are spare and cheap. And change your horses before they are too old and worn out or maimed, for with little money you can rear good and young ones, if you sell and buy in season. It is well to know how one ought to keep cattle, to teach your people, for when they see that you understand it they will take the more pains to do well.

How you ought to keep your beists for the plotgh.
You must keep your plough beasts so that they have enough food to do their work, and that they be not too much overwrought when they come from the plough, for you shall be put to too great an expense to replace them; besides, your tillage shall be behindhand. Do not put them in
pluous tens. Car vn eschaufure reynt entre le quyr e la pel e entre le quir e la leyne ke turne a grant damage as bestes. E si vos estor eyent prouendre decustume ke lur seyt done de cler iur a vn de messers on del pronost e medle o vin poy de [orge ${ }^{1}$ ] pur ceo ke il ia trop arrestes e houireynt les bouches as cheuaus. [^21][^22]houses in wet weather, for inflammation arises between the skin and the hair and between the skin and the wool, which will turn to the harm of the beasts. And if your cattle are accustomed to have food, let it be given at midday by one of the messers or the prorost, and mixed with little barley, because it is too bearded and hurts the horses' mouths. And why shall you give it them before some one and with chaff? I will tell you. Because it often happens that the oxherds steal the provender, and horses will eat more chaff for food and grow fat and drink more. And do not let the fodder for oxen be given them in a great quantity at a time, but little and often, and then they will eat and waste little. And when there is a great quantity before them they eat their fill and then lie down and ruminate, and by the blowing of their breath they begin to dislike the fodder and it is wasted. And let the cattle be bathed, and when they are dry curry them, for that will do them much good. And let the oxen be curried with a wisp of straw every day, and thereby they will lick themselves more. And let your cows have enough food, that the milk may not be lessened. And when the male calf is calved let it have all the milk for a month; at the end of the month take away a teat, and from week to week a teat, and then it will have sucked eight weeks, and put food before it, that it may learn to eat. And the female calf shall have all the milk for three weeks, and take from it the teats as with the male. And let them have water in dry weather within the houses and without, for many die on the ground of a disease of the lungs for lack of water. Further, if there be any beast which begins to fall ill, lay out money to better it, for it is said in the proverl, ' Blessed is the pemy' that saves two.'

[^23]How much milk your cows should yield.
If your cows were sorted out, so that the bad were taken away, and your cows fed in pasture of salt marsh, then ought two cows to yield a wey of cheese and half a gallon of butter a week. And if they were fed in pasture of wood, or in meadows after mowing, or in stubble, then three cows ought to yield a wey of cheese and half a gallon of butter a week between Easter and Michaelmas without rewayn. And twenty ewes which are fed in pasture of salt marsh ought to and can yield cheese and butter as the two cows before named. And if your sheep were fed with fresh pasture or fallow, then ought thirty ewes to yield butter and cheese as the three cows before named. Now there are many serrants and prorosts and dairymaids who will contradict this thing, and that is because they give away and waste and consume the milk; and know for certainty the milk is not wasted otherwise but in the same thing, for so much they onght to and can yield, for I have proved it. And you will see it with regard to the three cows that ought to make a wey. One of these cows would be poor, from which one could not hare in two days a cheese worth a halfpenny; that would be in six days three cheeses, price three halfpence. And the serenth day shall help the tithe and the waste there may be. Now that will be three halfpence in twenty-four weeks which are between Easter and Michaelmas---that is, three shillings. Now put as much for the second cow, and as much for the third, and then you will have nine shillings, and thereby you have a wey of cheese by ordinary sale. Now one of these three cows would be poor, from which one could not have the third of a pottle of butter a week, and if the gallon of butter is worth sixpence then is the third of a pottle worth a penny.

The noreture est as pors de aner longe matinee e de gysyr sek. Vos purcels fetes ensauer tant com eus letent adone cresterunt le meus.

## Coment yos decet yos berdyz trier.

Veet lie voster bercher ne seyt pas yrrons lar par rn irre acun peust estre vilement chace domnt ele put estre pery. La on les berbetz rount pessant e le bercher voyst entre a ens. ${ }^{2}$ Yos herbytz fetes trier the foys par an entre pasche e pentechoste e ceus lie ne sunt mye a retenyr les fetes par tens tondre e mercher des autres e les metet en hoys ke seyt enclos on en antre pasture on il pussent engressyr e entur la seynt Iohan les vendet car done serra char de motun en seson. E la leyne de ceus seyt rendu par sey oneke les peus ke sunt morz de morine. E kant les berbys serrunt renduz de ceo e de lur leyne e des peaus auandites releuet autant des tetes. The gent lement de ceuz lie sunt mors de morine autres. Coment? io le vos dyray. Si me berbyz murge sudeynement il mettent la char en ewe autant de hure com est entre mydi e noune e pus le pendent sus e liant le ewe est escule le fount saler e pus ben secher. E si nulle berbyz comence a descheyr ke il reent si ceo ne seyt par la reson ke les denz lur chement. E si les demz ne ly chete mie le fount

[^24]How you ought to sort out your swine.
Sort out your swine once a year, and if you find any which is not sound take it away. Do not have boars and sows unless of a good breed. Your other female swine canse to be kept, that they do not farrow; then shall their bacon be worth as much as that of the males. And let them be able to dig. They have need of help in three months, in February, March, and April. Three times a year ought your sows to farrow, unless it be for bad keeping. It is a good thing for swine to lie long in the morning, and to lie dry. Let your sucking pigs be well kept, and they will grow the better.

How you ought to sort out sheep.
See that your shepherd be not hasty, for by an angry man some may be badly overdriven, fiom which they may perish there where your sheep are pasturing and the shepherd comes among them. Sort out your sheep once a year, between Easter and Whitsuntide, and cause those which are not to be kept to be sheared early and marked apart from the others, and put them in enclosed wood or in other pasture where they can fatten, and about St. John's Day sell them, for then will the flesh of sheep be in season. And the wool of these may be sold by itself with the skins [of those] which died of murrain. And when the sheep are sold, for them and their wool and the shins aforesaid replace as many head. Some men replace others for those which died of murain. How? I will tell yon. If a sheep die suddenly they put the tlesh in water for as many hours as are between midday and three o.clock, and then hang it up, and when the water is drained off they salt it and then dry it. And if any sheep begin to fall ill they see if it be becanse the teeth drop, and if the teeth do not
tuer e saler e sechyr com lautre. E pus le funt perser e despendre en le hostel entre serianz e ouerours. E atant cum le pris amunte, rendunt e sesun e de ceo e des peaus releuent autant des testes mays io ne voyl mye ke vos vset cest manere. Veet ke vos berbyz seyent en mesun entre la seynt martyn e pasche io ne dy pas si la tere seyt secke e la fande seyt atyre a son dreyt e estrame e le tens seyt bel ke ros motuns i grsent. E ceus ke sunt en mesun ke yl eyent du ferm ou plas ou meyns solom ceo ke le tens est. $E$ fetes marler la eyre de la bercherye checune quinzeyne sicom ros ay dyt auant e ke seyt estrame sure e sachet ros aueret ayceles plus de pru ke si eus guesent en faude. E si le forage seyt medle il le maschermnt de meus par la grossur del forage. E si vos anet de faute defeyn le escorces e les corgers de pesaz est bon as motouns. ${ }^{1}$

## Coment hom deyt aygneus garder.

E quant ros aygneaus sunt aygnelez le le bercher ouste la lerme entur les treouns kar souent auent ke la leyne satache as bouches des ayneaus par les treons ele gloutet e demurt en lur estomak e par tant sunt plusurs periz.

[^25]fall out they cause it to be killed and salted and dried like the others, and then they cut it up and distribute it in the household among the servants and labourers, and they shall then yield as much as they cost, for by this means and with the skins they can replace as many. But I do not wish you to do this. See that your sheep are in houses betreen Martinmas and Easter, I say not if the weather be dry and the fold be prepared properly and strewed, and if the weather be fine your sheep may lie there, and let those that are in houses have more or less hay, according to the weather. And marl the ground of the sheepfold each fortnight, as $I$ have said before, and let it be stremed on the top, and know you shall have from these more profit than if they lie in the fold. And if wethers be in the house for a storm let them be by themselves, and let them have the coarsest hay or hay mixed with wheat or oat stran, well threshed. Why? I will tell gou. They are driven for the night in the fold, and by chance the morrow also, that they cannot pasture, and then come to the manger starving, and push back the weak and choke themselves without chewing the small hay. And when the sheep has eaten its fill it ruminates, and that which is not chewed cannot be chewed again, but remains within its body, and wastes unnaturally, whereby several have perished. And if straw be mixed with the hay they will chew it better because of the coarseness of the straw. And if you hare lack of hay the pods and straw of peas are good for sheep.

## How you ought to keep lajibs.

When your lambs are jeaned let the shepherd take away the wool about the teats, for often it happens that the wool adheres to the mouths of the lambs from the teats, and they swallow it, and it remains in their stomachs, and thereby have many died.

## Coment ros delet ros motuns changer.

A la seynt symon e seyn Iude facet tuer deus de meylurs e deus de myuneyns e deus de pyres e si ros trouet ke eus ne seyent mye seyens fetes vendre vne partye a lele genz par bone surte iekes a la hokeday e donc fetes releuer autres.

## Des owes e des gelins.

Des owes e des gelyns seyt al ordeynement du baylyf' e ne mye pur ceo al tens ke io fu baylyf dayes eurent les owes e les gelyns a ferme. Orre a xij d. e gelyne a iij d. e en ancun an valent iiij d.

## De rendre en seson.

Vendet e achatet en seson par verse de vn real ${ }^{1}$ homme ou de deus ke pussunt testmoyner les choses car souent auent ke ceus ke rendent aconte en cressent les achaz e amenusent les ventes. Si vos dent vendre ${ }^{2}$ par peys iluk seet auerty kar il ia fraude grant a ceus ke ne se seuent entreweyter.

## De vewe de aconte.

Vene de aconte fetes on facet fere par aucun de ki vos fyet rne ${ }^{3}$ fors en lan. $E$ final acounte an chef del an. Vewe de aconte fu fet pur samoyr le estat de la chose come des issues recejtes rentes achaz e autres despenses e de surse de deners si la ke il seynt leuez e des meyns des serianz remuez. Car soment auent ke serianz e prouoz par euz ou par autres fount marchandyse des deners lur seynur a lour prou e ne mye al prou lur seynur e ceo nest pas leaute. E si arrerage chete sur la conte final ke

[^26]How you ought to change your wethers.
At the feast of St. Simon and St. Jude cause two of the best ones, and two of the middling, and two of the worst, to be killed, and if you find that they be not somd sell a part by true men for good security, until Hockday, and then replace them.

Of geese and hens.
Let your geese and hens be under the command of the bailiff. Notwithstanding this, when I was bailiff, dairymaids had the geese and hens to farm, geese at twelve pence and hens at three pence, and in another year four pence.

To sell in season.
Buy and sell in season through the inspection of a true man or two who can witness the business, for often it happens that those who render account increase the purchases and diminish the sales. If you must sell by weight, be careful there, for there is great deceit for those who do not know to be on their guard.

## View of account.

Have an inspection of account, or cause it to be made by some one in whom you trust, once a year, and final account at the end of the year. View of account was made to know the state of things as well as the issues, receipts, sales, purchases, and other expenses, and for raising money. If there is any let it be raised and taken from the hands of the servants. For often it happens that servants and prorosts by themselves or by others make merchandise with their lord's money to their own profit and not to the profit of their lord, and that is not lawful. And if arrears appear in the final account let them be speedily raised, and
seyt hastiuement leue. E si eus noument treteyne ${ }^{1}$ persones ke deyuent le arrerage les nouns pernez a vos. Kar souent auent ke serianz e prouos sunt detturs eus meymes e funt autres detturs ke poyent ne deyuent e ceo funt il pur celer lur desleaute.

## Conent serianz e provoz se deyuent conteyner.

Ceus ke autri chose vnt en garde quatre choses deyuent auoyr par reson. De amer lur seynur e doter le. E quant a preou frere deusent penser ke la chose est lur. E quant a despenses fere dusent penser ke la chose est autri me poy des serianz e prouoz sunt ke ces quatre choses vnt ensemble si com io quyt mes plusurs sunt ke ount guerpi les treys e retenent le quart e le ount besturne hors de sun dreyt curs. Ben seuent ke la chose est autri en ne mye lur e pernent a destre e a senestre par la ou il quydent meux ${ }^{2}$ ke lur desleute ne seyt aperceu. Vos choses visitet souent e fetes reuisit car ceus ke treuent par tant escheuuerunt le plus de mal fere e se penerunt de meux fere.

Cy fynyst la dyte de hosebandrie.

[^27]if they name certain persons who owe arrears, take the names, for often it happens that servants and provosts are debtors themselves, and make others debtors whom they can and ought not, and this they do to conceal their disloyalty.

How sertants and provosts ought to behave.
Those who have the goods of others in their keeping ought to keep rell four things: To love their lord and respect him, and as to making profit, they ought to look on the business as their own, and as to outlays, they ought to think that the business is another's, but there are few servants and provosts who keep these four things altogether, as I think, but there are many who have omitted the three and kept the fourth, and have interpreted that contrary to the right way, knowing well that the business is another's and not theirs, and take right and left where they judge best that their disloyalty will not be perceived. Look into your affairs often, and cause them to be revierred, for those who serve you will thereby avoid the more to do wrong, and will take pains to do better.

Here ends the treatise of husbandry.

## SUPPLEMENT

TO

## LE DITE DE HOSEBONDRIE.

From Merton College Library. No. CCCXXI.

Si les denz eent la maladie dez verms eles seent bien arosez e puis les metez en vne meson ben forme ensemble autaunt de houre com de prime si qe a noune issi qe eles se puissent ben entrechaufer e suer e ceo est vne bone medecine pur vne maladie qe est apele en engleis pokkes. Si rous veez au matin qe vne bone rosee com ceo fust vne teine de igraingnes pendant sur le herbe entre le seint martyn e la teste seint Barthelmeu ne lessez pas voz berbiz issir hors de la faude en cele seson ieqes atant qe cele rosee seit nettement abatue. E auant ceo qe eles soient hors isuz de la faude le bercher les face leuer denz la faude auant qe eles issent car si ceo ne seit fet eles getteront lor feens en chiminaunt dehors la faude e ceo ne serroit mie preu e qe mesmes ceus berbiz voisent persaunt pur ceo qe eles vnt geu longement en la faude par la rosee qe tant ad duree. Estre ceo la rosee de vespre est seyne as auant diz berbiz. Estre ceo si vos auez pasture de bruere ou de more e le tens de este seit moistous ostez vos berbiz qe eles ne pessent en cele moisture par qei ieo le ros dirroy. Bien sauez qe le ewe qe demoert en cretine deuient neire ou iaune ou vermaile e ceo sunt ewes qe ne sunt mie seines car si vn cheual enbust parauenture il aueroit la chaude pisse e bon le sachez ore veignent les berbiz qe sunt pessaunt en cele more ou en bruere e lechent de cele mauueise ewe en pessant e demoert cele ewe en lor cors e auient a la fiez qe eles
comencent a eschaufer par la auantdite ewe primes prent colour de blaunc puis de jaune ieqes en purture e le volez vos veer Entur le seint michel tuez vne partie dez berbiz qe sunt en mesme la pasture e vos trouerez qe ieo vos di voir. E si vos volez qe eles soient sauez quant la cretine vient en lauant dite pasture en este tens le ostez e les metez en pasture sekke.

From the Bodleian Library, Digby, 147.
Aliud signum habent bercarii ad cognoscendum, an oues sint corrupti. Accipiunt oues et euertunt palpebram et inspiciunt renas circa oculos et si rubre fuerint, signum est sanitatis; et si albe, signum est infeccionis. Item aliud accipiunt ouem, et in latere post costas diuidunt lanam et temptant an lana firmiter [sic] pelli adhereat; et si ita est, bonum signum sanitatis est; et si lana cito euellatur, signum insanitatis est. Vlterius inspiciunt pellem ouis cum lana fuerit diuisa, et digito calefaciunt pellem, mouendo digitum super pellem, et si pellis deueniat subrubea, signum sanitatis est ; si alba vel pallida, signum corrupcionis est. Alind signum habent bercarii: in principio anni cum gelu venerit circa festum omnium sanctorum, mane cum venerint ad ouile inspiciunt oues, et ille [sic] quarum vellera gelata sunt reputant sanas; non gelatas propter nimiam et innaturalem calorem, reputant infirmas et non sanas. Necessarium est etiam quod bercarii inspiciant pasturam, quum aliquando accidit quod in mane multe albe testudines in pasturis apparent, et cum hoc inspexerint non permittant oues exire a falda, donec calor solis incaluerit, quia tune repunt in terram. Item stile est ut sagaciter inspiciant rorem qui rocatur meldeeu quia ille ros inficit oues si fuerit ab eisdem receptus. [Qui ros sic cognoscitur. Qualibet die cum ros fuerit, recipiat pastor virgam coruleam et madefaciat in rore, et faciat rorem distillare per virgam et si gutte adhereant in desecndendo sicut seruisia rubea vel viscosa, tune ros est infectus,
et si gutte descenderint curte non viscose, consideratis supradictis, potest dimittere oues ad pasturam quam mane voluerit.]' lam dicam tibi remedium contra corrupcionem ovium: accipem [sic] ouem infectam vel corruptam, et custodi eam a cibo quasi per diem, inclusam in quadam domo: secundo die recipe furfur triticeum, et bonam quantitatem salis et simul misceas et madefac cum aqua, et pone vas cum aqua mixta, et nichil aliud comedat per tres dies continuos et de illo sufficienter habeat [post ponatur ad pasturam et illud anno [sic] viuet]. ${ }^{2}$ Istud ponit Bartholomeus de proprietatibus rerum ${ }^{3}$ in testimonium cujus audiui a fidelibus ouem matricem durasse in bono statu in salcis pasturis per xxxiij annos, et certum est quod sal fuit in causa preservant et eam desiccant.

E si deit hom rer si lia en maner fust cressaunt ou boys gros ou merin gros' ke hom puisse

## THIS IS HUSBANDRY.

This writing teaches the way in which a man ought to direct bailiffs and provosts about rendering the account of a manor, and how a man ought to look after a manor.

In the first place he who renders account ought to swear that he will render a lawful account and faithfully account for what he has received of the goods of his lord, and that he will put nothing in his roll save what he has, to his knowledge, spent lawfully and to his lord's profit. And the clerk shall swear that he has lawfully entered in his roll what he understands his master has received of the lord's goods, and has entered nothing in the roll but what he understands may be to the profit of the lord. And then if he has rendered account before see how it compares, and if he is found in arrears of money, or of corn, or of stock, or of any other thing, put the whole in a stated money raluation, and charge it at the commencement of his roll, and then charge it with all other receipts of assise rents and with all other things for which any money can be raised, and charge it with the whole and put it at the end in a sum total and then go on to expenses.

## The cost of carts.

First as to the cost of carts. It is right that the smith should take a certain sum to find what is necessary in iron and steel for the ploughs and to shoe the horses and avers of the place, as well as one can bargain with him, according to what is paid elsewhere in the country. And then it must be seen if there is underwood on the manor, or large wood
prendre verges et harz \& autres choses necessaires saunz achat ausibien a charettes cum a charues si le prenge lem pur esparnier les deners e du surplusage ke nest mye trone ke luy couent achater luy seit alowe par resun e bon serreit ke il puisse aner charetters \& charuers ke seussent ourir tot lur merin demeyne tot luy deiuent le plus cher lower. Hom deit rer al chef del an toutes les menues choses necessaires $\&$ touz les estors toutes les ferrures $\&$ toutes lea choses ke en le maner demorent petites ou graundes \& mettre en escrit ke hom puisse ver al autre an queu chose luy couent bosoyngnablement achater \& ceo alower \& le surplusage retrere.

## Le office du prouost.

Le prouost deit fere quillir tot le peil des affres a fere cordes a ceo ke il auera a fere. E il deit fere semer en la cort caumbre a fere cordes a charettes \& a cheuestres \& as autres chose bosoyngnables \& luy deit estre alowe le fere si lia nul en la cort ki les sache fere. Amendement de mesuns de murs de hayes \& de fossees si mester seit luy deit estre alowe sulom ceo lie resun seit. Ne le prouost ne deit riens rendre ne achater ne resseiure ne liurer si par taile non \& par bone temoyngnaunce. E deit le prouost fere touz les seriauz de la cort quant il renent de lur labor ourer en la cort de batre ble on fere murs ou fossees ou hayes ou autres ourayngnes ${ }^{1}$ en la cort pur esparnier le dener. E si li ad seriaunt ke sache fere omrayngne en la cort dont luy conendreit alower cher vn autre si li face fere cel ourayngne \& lowe ma autre en sun lu. E deiuent les seneschaus \& les chefs bailifs ke tenent cort tauntost apres la seint michel rendre sus lur roules ${ }^{2}$ an seyngnur ou al auditor del aconte ke il puissent charger par ces roules les

[^30]or large timber that can be taken for poles and harrows and other necessary things without buying as well for carts as for ploughs, let them be taken to save money, and for the rest which is not found but what he must buy let him be paid justly. It would be well if he could have carters and ploughmen who should know how to work all their own rrood, although it should be necessary to pay them more. At the end of the year ought all the necessary small things and stock, horseshoes, and all things which belong to the manor, small or great, to be seen and put in writing, that one may see another year what thing must necessarily be bought, and make allowance for it and subtract the surplus.

The office of provost.
The provost must cause all the hair of the avers to be gathered to make ropes for which he shall have need, and he must cause hemp to be sown in the court to make ropes for the waggons, for harness and other necessary things, and an allowance must be paid for making them if there is any one in the court who knows how to do so. For repairing houses, walls, hedges, and ditches if need be an allowance must be paid according to what is right. And the provost must not buy, sell, receive, or deliver anything unless by tally and good witness. And the provost must make all the servants of the court when they come for their labour work in the court in threshing corn or making walls or ditches or hedges or other works in the court to save money. And if there is a servant who knows how to do work in the court for which it would be necessary to pay another highly, let him do the work and pay another in his place. The seneschals or head-bailifts ought to see all purchases and all sales that the provosts or under-bailiffs make to see that they are well made and to the lord's profit.

And the seneschals and chief bailiffs who hold court must, immediately after Michaelmas, give up their rolls to the lord or the auditor of the account that they may be able to charge
prouoz \& les bailifs ke deyuent aconte de purchaz de cors de tot lan. E le prouost deit respondre del issue des iumentes de la cort ceo est asauer de chescune iumente vn poleyn par an esili eit nule ke neyt poleyn si seit enquis si ceo seit par mauneyse garde out par defaute de viaunde ou par trop graunt trauail ou par defaute de stalun ou ke ele seit barayngne ke ele ne porte mye poleyn \& la pocit auer chaunge pur matre a tens \& ne fist mye si seit charge pleynement del issue ou de la value. E si ili eit nul chenal ou beste morte en la cort si seit enquis si ceo seit par defaute de gardeyn ou du bailif ou du prouost ke le puissent auer sauue ou nul amendement auter mys \& ne firent si le paent de lur e si il morent par meschaunce ke il ne puissent mes si com morine auient acoune feez sur bestes respoyngne le pronost des quirs $\mathbb{E}$ des peaus $\mathbb{\&}$ des chars \& des issues \& le metre al emprowement le seyngnur a myeuz ke il sauera ou purra. E si li eit nule chose perdue en la cort ou dehors ou emble lequel ke ele seit viue ou morte petite ou graunde ou le seyngnur puisse auer nule manere de perte ou par arsun ou en nule autre manere le seyngnur deit prendre a prouost \& le prouost deit prendre a ceus de la cort ke copables seient. E fet a sauer ke touz les seriaunz de la cort hommes \& femmes deiuent estre entendanz a pronost pur ceo ke le pronost deit respoundre de lur feez \& le prouost deit mettre ceus en la cort pur queus il voudra respoundre de lur fetz. E deit le seneschal ver ke le prouost eit bons plegges de touz ceus de la cort ki par le prouost isunt mis e si le seyngnur resseit nul damage par le prouost \& le prouost neit dont il puisse rendre les damages touz ceus de la vile ke luy elurent rendent le surplus pur luy de ceo ke il ne purra paer. E si le seyngnur ymette parker ou messer ou grannger ou autre ki ke il seit \& le seyngnur resseiue nul damage par nul de eus ke il imette le seyngnur se deit prendre a eus pur ceo le il imist \& nyent a prouost. Fet a entendre ky as maners ke sunt gardes par bailifs ${ }^{1}$ ke respount del maner tot autresi com le prouost rende

[^31]by these rolls the provosis and bailiffs who must account for the purchases of the court throughout the year. And the provost must answer for the issue of the mares of the court, that is to say, for each mare one foal in the year, and if there be any which has no foal let it be inquired if it be by bad keeping, or want of food, or too hard work, or want of stallion, or because it was barren, that she bore no foal ; and if she could have been changed for another in time and it was not done, let him be charged fully for the issue or the value. And if there be any horse or beast dead in the court, let it be inquired if it was for want of keeping or because the bailiff and provost could have saved it or made any amendment and did not let them pay it themselves, and if they died by mishap that they could not help, as murrain which falls sometimes on beasts, the provost must answer for the skins and hides and flesh and issues, and put it to the profit of the lord as well as he knows or is able. And if there be anything lost in the court or without, or stolen, whether it be live or dead, small or great, where the lord can have any kind of loss, either by fire or any other way, the lord must take [the value] from the provost and the provost must take it from those of the court who may be to blame. And make it known that all the servants of the court, men and women, ought to obey the prorost, because he must answer for their doings, and the provost must put those in the court for whose doings he will be answerable. And the seneschal must see that the provost has good pledges for all those in the court who are put there by him, and if the lord receire any damage by the prorost, and the provost cannot make good the damage, all those of the township who elected him shall make up for him the amount he cannot pay. And if the lord place any parker or messer or granger or other, whoever he be, and the lord receive damage from any of these he places, he must take the value from them, because he put them there, and nothing from the provost. Make it known that on the manors which are kept by bailiffs they must answer for the manor, just as the provost renders account eren so must
aconte tot autresi deit respondre a toutes choses ne mot remue ne chaunge cum le prouost. Touz ceus ke tenent en villenage de vn maner deiuent elire le prouost tiel pur ke il voleyent respoundre kar si le seyngnur resseiue nul damage par defaute de prouost \& il ${ }^{1}$ ne eit mie du sien dont il le puisse rendre ke il paent pur luy le surplus ky il ne purra paer.

## Respons du semail.

Toute la terre deit estre mesuree en chescun champ par sey \& chescune coture du champ nome par sun non e chescun pre par sey \& chescune pasture \& chescun boys \& chescune launde \& turberie \& more \& marreys ausi par sey \& tot par la perche de xvi peez \& demy pur ceo ke hom poet par resun la terre ke est mesuree par la verge de xvi peez \& demy semer en mouz de lius iiii acres de vn quarter \& en mouz de lius conent il vn quarter \& demy a semer v acres de furment $\&$ de segle $\&$ de feues $\mathbb{\&}$ de poys $\&$ deus acres de in quarter de orge \& de aueyngne mes pur ceo ke les vnes terres volunt estre semez plus espes ke les autres si deit hom en chescun maner mesurer i acre pur chescun ble \& ver de combien hom purra semer chescune manere de ble sur vne acre mesuree \& donc poet estre certeyns toz iors de rostre semail. E pur ceo ke hom seme le erge ${ }^{2}$ en le chaump de furment \& les feues \& les poys \& les lentiles $\&$ les aueyngnes si deit hom nomer chescune coture ke est seme de orge entre le furment $\&$ chescune coture de autre ble ke est seme eutre les aueyngnes. E la ou les champs sunt parti en ij le inernage \& le trames est tot seme en $\mathbf{j}$ champ donc deit il respoundre de chescune coture quele coture est seme de vn ble \& quele de autre. E si liad inhom il deit ver quele coture il prent en le inhom $\mathbb{\&}$ de quel ble il seme chescune coture is tel semail deit il tailer tot par luy \& respondre tot par luy hors des autres blez.

[^32]he render account for everything, and move and change nothing as the provost. All those who hold in villenage on a manor must elect as provost such a one as they will answer for, for if the lord suffer any loss by the fault of the provost, and he hare not of his own goods the wherewithal to make it good, they shall pay for him the surplus which he cannot pay.

## The return for seed sown.

All the land ought to be measured in each field by itself and each cultura of the field named by its name, and each meadow by itself, and each pasture and each wood and each waste and turbary and moor and marsh also by themselves, and all by the perch of sixteen feet and a half, because one can in many places reasonably sow fom acres with a quarter of seed, where the land is measured by the perch of sisteen feet and a half, and in many places it requires a quarter and a half to sow five acres with wheat, rye, and beans and peas, and two acres with a quarter of barley and oats, but, because some lands must be sown more broadly than others, let there be measured on each manor an acre for each corn, and see with how much one can sow each kind of corn on a measured acre, and thereby can you always be sure of your corn. And because barley is sown in a wheat field and peas and vetches and oats, therefore each cultura which is sown with barley among the wheat must be named and each division of other corn which is sown among the oats. And there where the fields are divided in two, winter seed and spring seed are both sown in one field, for which each division must answer as it was sown with one corn or another. And if there is inhom it must be seen what cultura he takes in inhom, and with what corn he sows each cultura, and such sowing he must tally all by itself and answer for all by itself apart from the other corn.

Coment hoy deit alower les ourors en aust \& en tens de fenesun.

## Coment la terre deit estre mesuree.

E pur ceo lie les acres ne sunt mye touz de ve mesure kar en acon pays mesurent il par la verge de sviii peez e en acon par la verge de $x x$ peez e en acoun par la verge de sxii peez e en acoun par la verge de xxiiij peez. E denet sauer le lacre le est mesuree par la rerge de sviii peez fet i acre \& vne rode \& le xvj de the rode de la verge de la verge ${ }^{2}$ de svi peez e iiij acres funt $v$ acres \& le quart de vne

$$
\text { de. } \quad \text { Sic. }
$$

How one nust pay labourers in augu'st and in time of Haymaking.

You can well have three acres weeded for a penny, and an acre of meadow mown for fourpence, and an acre of waste meadow for threepence-halfpenny, and an acre of meadow turned and raised for a penny-halfpenny, and an acre of waste for a penny-farthing. And know that five men can well reap and bind two acres a day of each kind of corn, more or less. And where each takes twopence a day then you must give fivepence an acre, and when four take a penny-halfpenny a day and the fifth twopence, because he is binder, then you must give fourpence for the acre. And, because in many places they do not reap by the acre, one can know by the reapers and by the work done what they do, but keep the reapers by the band, that is to say, that five men or women, whichever you will, who are called half men, make a band, and twenty-five men make five bands, and twenty-five men can reap and bind ten acres a day working all day, and in ten days a hundred acres, and in twenty days two hundred acres by five score. And see then how many acres there are to reap throughout, and see if they agree with the days and pay them then, and if they account for more days than is right according to this reckoning, do not let them be paid, for it is their fault that they have not reaped the amount and hare not worked so well as they ought.

How the land ought to be measured.
Because acres are not all of one measure, for in some countries they measure by the perch of eighteen feet, and in some by the perch of trenty feet, and in some by the perch of twenty-two feet, and in some by the perch of twenty-four feet, know that the acre which is measured by the perch of eighteen feet makes an acre and a rood, and the sixteenth of a rood, of the perch of sixteen feet, and four acres make five acres and a quarter of a rood, and
rode e viij acres funt x acres \& demye rode. E xvj acres funt xx acres \& une rode. E lacre ke est mesuree par la verge de xx piez fet i acre $\&$ demye $\&$ le quart de vne rode e iiij acres funt vi acres \& une rode e viij acres funt sii acres \& demye. E xvi acres funt xav acres. E lacre ke est mesuree par la verge de xxij peez fet i acre $\& \mathbb{d}$ demi $\mathbb{E}$ une rode $\mathbb{\&}$ demi $\&$ le xvi de vne rode e les iiij acres funt rii acres $\&$ di. \& le quart de rne rode. E les viij acres funt xr acres \& demye rode. E les xvi acres funt xxx acres \& une rode. E lacre ke est mesuree par la verge de xxiiij peez fet ij acres \& une rode. E iiij acres funt is acres.

## Respons del issle de la graunge.

Del issue de la graunge deit hom ver combien il iad seme de chescun ble $\mathbb{E}$ de combien il respount del issue ke par dreit \& par comoune respounse le orge deit respondre al viii greyn ceo est asauer de rin quarter seme riij quarters del issue. E le segle al rij greyn e feues au ri \& poys a ri. E de drage de orge \& de aueyngne si il est ouelement medle au ri. E si lia plus de orge ke de aueyngne plus deit respoundre. E silia meyns de orge ke de aueyngne le moyns. E ausi de mestilon de furment \& de segle si il est ouelement medle deit respoundre au sime e si lia plus de segle ke de furment le plus deit respoundre. E silia plus de furment ke de segle le merns. E le furment par dreit deit respondre a r greyn $\&$ le aueyne au quart mes pur ceo ke les terres ne respounent ausibien mon cum rn autre ne les mauneyses terres ne respounent mye cum les bones. E de autre part il auent ke le iuernage se prent bien \& le trames fant e acoune feez le trames se prent bien \& le iuernage faut. E pur ceo si la terre ne respount de plus ke ele nest charge par le grean le seyngnur iperd. E si ele respoyngne de meyns il couent ke celuy ke rent laconte le paye del sien demeyne. E pur ceo ne poet hom mye prendre certeynement a la respounse auaunt dite e ne mre pur ceo monz de genz le pernent issin ke par le
eight acres make ten acres and a half rood, and sixteen acres make twenty acres and a rood. And the acre which is measured by the perch of twenty feet makes one acre and a half and the quarter of a rood, and four acres make six acres and a rood, and eight acres make twelve acres and a half, and sisteen acres are twenty-five acres. And the acre which is measured by the perch of twents-two feet makes one acre and a half, and a rood and a half and the sisteenth of a rood, and four acres make seven and a half and quarter of a rood, and eight acres make fifteen acres and a half rood, and sisteen acres make thirty acres and a rood. And the acre which is measured by the perch of twenty-four feet makes two acres and a rood, and four acres make nine acres.

The return from the products of the gringe.
As to the issue of the grange, one must see how much there is sown of each corn and how much it yields for issue by right and common return; barley ought to yield to the eighth grain, that is to say, a quarter sown should yield eight quarters; rye should yield to the seventh grain, and beans and peas to the sixth. And dredge of barley and oats, if equally mixed, to the sixth, but if there is more barley than oats it ought to yield more, and if there is less barley than oats, less. And also the mistelyn of wheat and rye, if it is equally mised it should yield to the sisth, and if there is more rye than wheat it ought to yield more, and if there is more wheat than rye, less. And wheat ought by right to yield to the fifth grain and oats to the fourth, but because lands do not yield so well one year as another, nor poor land as the good, and besides it may happen that the winter sowing takes well and the spring sowing fails, and sometimes the spring sowing takes well and the winter sowing fails, and because, if the land does not yield more than was sown, then the lord loses, and if it yield less he who renders account pays it himself. And so one cannot be sure of the vield above mentioned and not because many pecple take
greyn. E ki ne veut issi si metre vn leal homme en ki il se affie outre la baterie de la graunge. E bon est ke celuy ke est outre la baterie metre en la taile le issue de chescune meye \& de la graunge par sei pur ver de quants de quarters chescune meye respount par sei. E si li ad tas de hors si le face mesurer par rode \& par pee la leaure \& la lungure \& la hautor quant il le fra batre \& taile chescun tas par sei. E si il reut vendre sun ble en gres si poet il le myeuz sauer combien chescun tas deit valer sulom le marche du ble. E tot vende il le ble en gres bon est ke il taile \& ke il veie le issue de chescune meye \& de chescun tas kar com plus souent esprouera plus certeyn serra del issue \& de la respounse pur ceo ke les blez ne respounent pas chescun an ouelement. E prenge garde celuy ke est outre la baterie de ble ke si il bate nul viel ble entre le nouel ke il batre \& taile le viel tot par luy e ke le prouost respoyngne en sun roule del rente de ble tot par luy pur ver le issue de chescune annee si il respount a sun semail. E si ros fetes brez il ros deit toziors respondre de ix quarters le $x^{1}$ a tot le meyns if si est ceo mout petite response mes hom le met a ceo pur ceo ke hom purra fere le ble trop germir pur fere vn graunt respouns del anantage par vat le brez vaudreit mout le meyns \& le meyns respoundreit de ceruoyse.

Response de la daerie e conent la dae deit respondre del menu estor de la cort \& de lur issue.

E vos deuet aner en chescun lu ou daerie est homme ou femme pur garder le menu estor de leinz cum auant est dit. E si il est homme si deit il fere toutes choses cum rne femme ifust e deit prendre a xri semeyngnes le
it so by the grain. And he who does not wish it so, let him put a true man in whom he trusts over the threshing. And it is well that he who is over the threshing should tally the product of each mow of the grange by itself to see how many quarters each mow yields by itself. And if there be a stack outside, let it be measured by rod and by foot, the breadth, length, and height, when it is about to be threshed, and tally each stack by itself, and then it will be possible to know the yield and issue of each mow outside as well as of each stack within the grange; but let the stacks be each year of the same size in breadth and length and height. And if he wish to sell his corn in gross, he will know better how much each stack is worth according to the price of corn. And although he sell the corn in gross, it is well to tally it and see the issue of each mow and of each stack, as the more often he proves it the more sure he will be of the yield, because corn does not yield equally each year. Take care that he who is over the threshing, if he thresh any old corn among the new, that he thresh and tally the old quite by itself; and let the provost answer in his roll for the sale of the corn quite by itself, to see the issue of each year, if it yields its seed. And if you make malt, he must always answer you, for nine quarters, a tenth at the least; and this is a little yield, but it is fixed thus because corn can be made to sprout too much to make a good return for profit, whereby the malt is worth much less and will yield less ale.

The yield from the dary, and how the darywoman ought to answer for the shalil Live stock of the court and for their issue.

You must have, in each place where there is a dairy, a man or woman to keep the small live stock there, as said before. If it is a man, he must do everything as a woman would, and he ought to take every sisteen weeks a quarter
quarter pur le auantage ke il ad du blaunk la ou les autres serianz prenent a xii semeyngnes. E ele deit venter tot le ble \& serra de la moyte del ior pae pur paer la femme ke la aide. [of corn], because of the advantage he has from the milk, where other servants take it every twelve weeks. And she must wimnow all the corn, and shall be paid for a half-day to pay the woman who helps her. And she ought to winnow four quarters of wheat or of rye and six quarters of barley and peas and beans and oriace for a penny, and eight quarters of oats for a penny, And one must always take for four a fifth over for the comble of all kind of corn. Also, one ought to thresh a quarter of wheat or rye for tropence, and a quarter of barley, and peas, and beans, for a penny-halfpenny, and a quarter of oats for a penny, and always allow for four a fifth for the comble. And the dairywoman must take care of all the small animals in the court, as sucking-pigs and peacocks and their issue, and geese and their issue, and capons and cocks and hens and chickens and eggs and their issue. And you must know that a sow ought to farrow twice a-year, haring each time at the least seven pigs, and each goose five goslings a-year ; and each hen, for a hundred and fifteen eggs, seven chickens, three of which ought to be made capons, and, if there be too many hen chickens, let them be changed for cocks while they are young, so that each hen may answer for three capons and four hens a-year. And for five geese you must have one gander, and for five hens one cock. And each cow ought to answer for a calf a-year, and each owe one lamb a-year ; and if there be a cow which has not calved or a ewe which has not lambed in the year, let it be inquired whose fault this is, either the bailiff's or the provost's or the keeper's, for want of keeping or want of food in the summer or winter, or want of a male, or if the provost could have changed it for another in time and did not, and, if it be found to be any fault of these, let them be fully charged for the issue or its value. And also if any [beast] die in any way by their fault, let them answer for the live beast or its value. And if this is a manor where there is no dairy, it is always good to have a woman there, at a much less cost than a man, to keep the small animals there and what there is within the court, and answer for all pro-

E le deit fere toziors furmage de len demyn de seynt michel iekes le ior seint martin au meyns mes en lautre sesun apres nouel iekes le este si il plus profite au seyngnur de vendre leat ke de fere furmage kar ataunt vaut a rendre i galon de leat a donc cum iij en este ou en the autre sesun. E si ros feisses furmage done ne raudreit i galon de leat adonc nyent plus ke en autre sesun.
duce there as a dairywoman would-that is to say, when the sors farrow for their pigs, for peacocks and their chicks, if there are any, for geese and their goslings, for capons, cocks, hens, and their chickens and eggs-and she ought to answer for the half of the winnowing of the corn also as the dairywoman.

The return from cows, heifers, and their milk.
Each cow ought to yield, from the day after Michaelmas until the first kalends of May, for twenty-eight weeks, one day with another, tempence for all that time, more or less. And it must be understood that all cows do not yield alike; some give more, some less, some give milk sooner than others and are sooner dry, and heifers do not give as much milk at their first bearing as after, but, one with another, they ought to yield as much reasonably. And from the morrow after the first kalends of May until Michaelmas, for twentyfour weeks, one day counted with another, makes one hundred and sisty-eight days; then ought the yield of milk of each cow to be worth, during that time, three shillings and sixpence, and all the other season the yield is worth tenpence, and by this reckoning each cow ought to yield milk to the value of four shillings and fourpence. And be it known that each cow should give as well, from the kalends of May to Michaelmas, six stones of cheese and as much butter as shall make as much cheese-that is to say, always, to seven stones of cheese, one stone of butter. And cheese should always be made from the morrow after Michaelmas until Martinmas, at least; but in the other season, after Christmas until the summer, it is more profitable to the lord to sell the milk than to make cheese, for then a gallon of milk, if sold, is worth as much as three in summer or at another time. And if you should make cheese, then a gallon of milk is not worth more than at another time.

## Respons de berbiz \& de lư blaunk.

Chescune mere berbit deit respondre del issue de sun leat partot le este tant cum ele est letere de vi d. Kar les meres berbiz ne sunt mye leteres outre le aust, ne hom ne les tient mie volunters leteres ${ }^{1}$ aust pur ceo ke il valent le meyns \& sunt plus perilouses a iuerner, e si eles seient malades ou febles si letent le meyns. [^33]The return from sheep and their milk.
Each ewe should answer sixpence for the yield of its milk through the summer, while it is giving milk, for ewes do not give milk aiter August; and no one would willingly have them give milk after August, because they would be worth less and more difficult to keep in winter. And if they be sick or weak, let them be milked less. And the dairywoman ought to answer besides for the yield of a gallon of milk, cheese, and butter from the sheep, as a gallon and a half of milk from the cow. And a gallon of butter weighs seven pounds, and two gallons weigh fourteen pounds, and fourteen pounds are a stone, and fourteen stone are a wey. And let it be known that a mare is in foal forty-nine weeks, and a cow is in calf forty weeks; a ewe goes with lamb twenty-one weeks, and a sow can farrow five times in two years and not more; and a goose will hatch once a-year if she is good, but she will not do this every year, nor can she be made to, but, according as they are well kept, they will yield more or less.

How one ought to farm out the issue of the stock.
If you wish to farm out the issue of your stock, you can take four-and-sixpence clear for each cow and acquit the tithe, and save for yourself the cow and calf; and for a sheep sixpence and acquit the tithe, and keep the sheep and lamb; and a sow should bring you six shillings and sixpence a-year and acquit the tithe, and save for yourself the sow ; and each goose ought to bring you sevenpencehalfpenny clear and acquit the tithe and save the goose; and each hen should bring you ninepence clear and acquit the tithe and save the hen. And ten quarters of apples and pears should yield seven tuns of cider ; and a quarter
cisere. E i quarter de neiz deit respondre de iiij galons de oile. E chescune rouche de eez deit respoundre de ij rouches par an de lur issue lun parmy lautre kar acoune ne rent nule \& acoune iij or iiij par an. E en acon lu lur doune lom a manger rien de tot le iuer e en acon lu lur doune lom. E la ou hom lur doune a manger si pount il pestre viij rouches tot le iuer de i galon de miel par an. $\mathbf{E}$ si vos nel quillez fors en ij aunz si aueret ij galons de miel de chescune rouche.

## Explicit hosebonderie.

of nuts should yield four gallons of oil. And each hive of bees ought to yield for two hives a-year, one with another, for some yield nothing and others three or four a-year, and in some places they are given nothing to eat all winter and in some they are fed then, and where they are fed you can feed eight hives all winter with a gallon of honey; and if you only collect the honey every two years, you should have two gallons of honey from each hive.
'The end of hesbindrs.

# SENESCHAUCIE 

AUTHOR UNENOWN

## Ci comence la seneschaucie re pertint a seneschal de terres.

Le seneschal de terres deit estre sages e leaus e apruant e deit sauer [lassise del regne] ${ }^{1}$ pur soreyne bosoignes defendre e pur les baillifs ke desoz li sont en lor dotances certifier e aprendre. Item il deit deus o iij foiz fere son tour par an e visiter les maners de sa baillie e donke deit il enquerre de rentes de seruises e de costumes concelees e sustretes e de franchise de corz de terres e de boys de prez de pastures de ewe de molins e des autre choses ke a maners aportenent sanz garant aloynnez par $\mathrm{li}^{2}$ e coment e si il ad poer de amender les choses anant dites en forme de dreiture sanz tort fere a nuly ${ }^{3}{ }^{[4]}$ e si il ce ne put fere mostre a son seignur ke il se entremette si il ueut sa dreiture conquere.

[^34]
## Here begins the book of the office of seneschal.

The seneschal of lands ought to be prudent and faithful and profitable, and he ought to know the law of the realm, to protect his lord's business and to instruct and give assurance to the bailiffs who are beneath him in their difficulties. He ought tro or three times a year to make his rounds and risit the manors of his stewardship, and then he ought to inquire about the rents, services, and customs, hidden or withdrawn, and about franchises of courts, lands, woods, meadows, pastures, waters, mills, and other things which belong to the manor and are done away with without warrant, by whom, and how: and if he be able let him amend these things in the right way without doing wrong to any, and if he be not, let him show it to his lord, that he may deal with it if he wish to maintain his right.

The seneschal ought, at his first coming to the manors, to cause all the demesne lands of each to be measured by true men, and he ought to know by the perch of the country how many acres there are in each field, and thereby he can know how much wheat, rye, barley, oats, peas, beans, and dredge one ought by right to sow in each acre, and thereby can one see if the prorost or the hayward account for more seed than is right, and thereby can he see how many ploughs are required on the manor, for each plough ought by right to plough nine score acres, that is to say: sixty for winter seed, sixty for spring seed, and sixty in fallow. Also he can see how many acres ought to be ploughed yearly by boon or custom, and how many acres remain to be tilled by the ploughs of the manor. And further he can
partant put il uer quant des acres deiuent estre siez de priere e de costume e quant des acres pur deners e si il iad nul treget en la semence $o$ en le arure $o$ en le sier legirement le aperceura. Item il deit fere mesurer toz les prez e tote les pastures senerales par acres e partant put hom sauer les costages ${ }^{1}$ e combin defein couint par an a la sustenance del maner e de combin de estor lem put sustenir de la pasture seurale e combin de la commune. ${ }^{2}$

Le seneschal ne ad nul poer de remuer baillif ne seriant ke est one son seignur en chef e a ses robes e a sa lineree sanz especial mandement le seignur car issi freit il de la teste ${ }^{3}$ keve ${ }^{4}$ mes si le baillif est meins sachant ou meins aprouant ke estre ne deit ou si il ad trespas fet ou mauueste en sa baillie soit mustre a son seignur e a son consail e il enface ce ke il quidra ke bon seit.

Le seneschal ne eit pas poer de garde de mariage ne de eschete rendre ${ }^{5}$ ne dame ne femme douer ne homage ne seute ${ }^{6}$ prendre ne rilayn ${ }^{7}$ rendre ne enfranchir ${ }^{8}$ sanz especial garant de son seignur. Item le seneschal ne deit pas estre sourein acontur de choses de ${ }^{9}$ sa baillie car il deit sur le aconte de chescon maner respondre de ses fez e de ses comandemenz e de ses apruemenz e de fins e des amerciemenz de curz par ly plede si com vn autre e pur ce ke nul homme ne put ne ne deit estre iuge ne instice de son fet propre.

Le seneschal deit a sa venue a chescun maner ver e enquere de terres coment ele sont gaignees e ensesonees eles chiuaus charetters e les auers e les boefs e les vaches les berbiz e les porz coment il sont gardes e aprueys e si il yeit perte ou damage par defaute de garge ${ }^{10} \mathrm{e}$ si deit prendre les amendes de ceus lie sont encupe ${ }^{11}$ ensi ke le seignur ne perde. Item le seneschal deit puruer ke chescun maner

[^35]; [malle ne femele.]
${ }^{8}$ alegger.
${ }^{9}$ ky touche.
${ }^{10}$ garde.
11 coupables.
see how many acres ought to be reaped by boon and custom, and how many for money. And if there be any cheating in the sowing, or ploughing, or reaping, he shall easily see it. And he must cause all the meadows and several pastures to be measured by acres, and thereby can one know the cost, and how much hay is necessary every year for the sustenance of the manor, and how much stock can be kept on the several pasture, and how much on the common.

The seneschal has no porrer to remove a bailiff or serrant who is with the lord, and clothed and kept by him, without the special order of the lord, for so he would make of the head the tail ; but if the bailiff be less capable or less profitable than he ought to be, or if he have committed trespass or offence in his office, let it be shown to the lord and to his council, and he sliall do as he shall think good.

The seneschal should not hare power to sell wardship, or marriage, or escheat, nor to dower any lady or woman, nor to take homage or suit, nor to sell or make free a vilein without special warrant from his lord. And the seneschal ought not to be chief accountant for the things of his office, for he ought on the account of each manor to answer for his doings and commands and improvements, and for fines and amerciaments of the courts where he has held pleas as another, because no man can or ought to be judge or justice of his own doings.

The seneschal ought, on his coming to each manor, to see and inquire how they are tilled, and in what crops they are, and how the cart-horses and avers, oxen, cows, sheep, and swine are kept and improved. And if there be loss or damage from want of guard, he ought to take fines from those who are to blame, so that the lord may not lose. The seneschal ought to see that each manor is properly
seit estore a son dreit e si il iad surcarke ${ }^{1}$ a nul maner plus ke la pasture ne put soffrir seit remue le surkarke iekes a autres maners la ou id iad meyns de carke e si le seignur ad a fere de deners pur dette rendre o pur achat fere a certein terme auant le terme e auant le tens ke bosoin sorde si deit le seneschal puruer as maners dont il put aner deners a greindre preu e a mendre damage car [purueer ne se uoet si pert souent]. ${ }^{2}$

Le seneschal deit a sa uenue as maners enquere coment le baillif se porte de denze dehors quele garde il prent e quel apruement il fet e quel encres e quel profit en la maner en sa baillie par la reson de sa demore. E ausins del pronost e del hayward e del estorror e de tuz les autres mesters coment chescun se porte endreit de sey e par ${ }^{3}$ put il meuz estre certifie ky fet pru e ky damage. Item il deit puruer ke il nyeit a nul maner wast ne destruccion ne mul surcharke de nule chose ke touche le maner il deit remuer toz ceus ${ }^{4}$ ke le seignur ne sont bosoignables e toz les serianz ke de rin ne seruent e tot le surcarke de la dayerie e des autres mesters ${ }^{5}$ sanz preu e reson ke sont a pele fause mises sanz pru.

Le seneschal deit a ses venues a maners enquere de les mesfesanz e de trespas fet en park en viuers en waremnes en coningers en columbers ${ }^{6}$ e de toz autres choses ke sont fez en damage de son seignur en sa baillie.

## Le office de batlidif.

Le baillif deit estre leaus e pruant e bon gaignur e sage ausi ke il ne cotleigne mie mander a son seigntur ne a son sourein seneschal pur aner consail e aprise de tote les

[^36]${ }^{5}$ [qe nul proune font for wast. E il deyt abregger touz les constages nynt bossognables par les maners.]
${ }^{6}$ ewes defendues.
stocked, and if there be overcharge on any manor more than the pasture can bear, let the overcharge be moved to another manor where there is less stock. And if the lord be in want of money to pay debts due, or to make a purchase at a particular term, the seneschal ought before the term, and before the time that need arises, to look to the manors from which he can have money at the greatest advantage and smallest loss, for if he will not provide, he will often lose.

The seneschal ought, on his coming to the manors, to inquire how the bailiff bears himself within and without, what care he takes, what improvement he makes, and what increase and profit there is in the manor in his office, because of his being there. And also of the provost, and hayward, and keeper of cattle, and all other offices, how each lears himself towards him, and thereby he can be more sure who makes profit and who harm. Also he ought to provide that there should be no waste or destruction on any manor, or overcharge of anything belonging to the manor. He ought to remore all those that are not necessary for the lord, and all the servants who do nothing, and all overcharge in the dairy, and other profitless and unreasonable offices which are called wrong outlays, without profit.

The seneschal ought, on his coming to the manors, to inquire about wrong-doings and trespasses done in parks, ponds, warrens, conygarths, and dove-houses, and of all other things which are done to the loss of the lord in his office.

The office of pailiff.
The bailiff ought to be faithful and profitable, and a good husbandman, and also prudent, that he need not send to his lord or superior seneschal to have advice and
choses ke touchent sa baillie si ne fust de estrange cas o de grant peril car baillif poy raut en bosoign ke poi oit ${ }^{1}$ e ren nad de sey sanz autrui aprise le baillif deit par matin leuer e soruer les boys les blez les prez e les pastures e ver le damage ke soit fet e il deit uer ke les charues soyent matin ionz e a dreit vre soient desionz ${ }^{2}$ ensi ke il facent le iour lor dreit arrure quant ke il fere poent e deyuent par la perche mesuree e il deit fere les terres marler fauder composter aprouer e amender ensi lie son sen apruge pur le pruement e le mendement del maner. Item il deit uer quant des acres mesurees les priez e les custumez deyuent arer par an e quant des acres les charues deiuent gaigner del maner e par tant put il abreger le surplus del cust. E il deit uer e estendre quant des acres de pre ${ }^{3}$ les custumes deiuent faucher e leuer e quant des acres de ble les priez e les custumers deyuent sier e carier e par tant put il uer quant des acres de pre remenent a faucher e quant des acres de ble remenent a sier por dener e ensi ne sera il point de ceu de fause alouance e il deit defendre ke nul prouost ne nul bedel ne nul hayward ne nul autre seriant del maner ne chyuauchent ne prestent ne surmeynent les chiuaus charetters ne les autres. ${ }^{4}$ Item il deit ver ke les chiuaus e les befs e tot le estor seit bin garde e ke nul autre auers ne pessent ne mangeuent lur pasture.

Le baillif deit estre dreiturel en toz poinz e en toz se fez e il ne deit pas prendre fin de terre ne de relif ne femme ${ }^{5}$ alegger sanz le seneschal ne nule rin pleder ${ }^{6}$ fye ne franc tenement ${ }^{7}$ ne franchise ke torne a desheriteson de son seignur sanz garant e il ne deit pas remuer pronost ne fere sanz le seneschal mes si il ad fet trespas ou mauneste mettre le par bon plegges li e ses chateus a respondre de ses fez par deuant le seneschal. Item il ne deit a nule manire fere fornir ne batre ${ }^{8}$ sanz garant de

```

[^37]instruction about everything connected with his baillie, unless it be an extraordinary matter, or of great danger ; for a bailiff is worth little in time of need who knows nothing, and has nothing in himself without the instruction of another. The bailiff ought to rise every morning and surrey the woods, corn, meadors, and pastures, and see what damage may have been done. And he ought to see that the plonghs are yoked in the morning, and unyoked at the right time, so that they may do their proper plonghing every day, as much as they can and ought to do by the measured perch. And he must cause the land to be marled, folded, manured, improved, and amended as his knowledge may approve, for the good and bettering of the manor. He ought to see how many measured acres the boon-tenants and customary-tenants ought to plough yearly, and how many the ploughs of the manor ought to till, and so he may lessen the surplus of the cost. And he ought to see and know how many acres of meadow the customary-tenants ought to mow and make, and how many acres of corn the boon-tenants and customary-tenants ought to reap and carry, and thereby he can see how many acres of meadow remain to be mowed, and how many acres of corn remain to be reaped for money, so that nothing shall be wrongfully paid for. And he ought to forbid any provost or bedel or hayward or any other servant of the manor to ride on, or lend, or ill-treat the cart-horses or others. And he ought to see that the horses and oxen and all the stock are well kept, and that no other animals graze in, or eat their pasture.

The bailiff ought to be just in all points and in all his doings, and he ought not, withont marrant, to take fines or relief from the land, nor enfranchise a woman without the seneschal, nor hold pleas touching fees or frechold or franchise which turn to the loss of the lord. And he must not remove or make a prorost without the seneschal ; but if he have trespassed or done wrong, let him be put in good surety, he and his goods, to answer for his doings before the seneschal. He must not in any wise bake or brew
seignur ne nul ke veigne as maners par le seignur ne sanz le seignur. ${ }^{1}$ nen eit costages del maner for ce ke le baillif vodra payer de sa burse e si le baillif seit atorne ${ }^{2}$ pur ${ }^{3}$ deners pur ses estouers ensi ke rin ne prenge del maner for litire fen e busche.

Nul baillif ne sofre en sa baillie ke chiual ne auer bof ne vache [juenene aner]' moton ne mereberliz ne hogastre soient escorces anant ke lem les eyt veu par quel

[^38]without the lord's warrant. And no one who comes to the manor, for the lord or without the lord, may be at the expense of the manor, unless the bailiff wish to pay it from his own purse. And let the bailiff be appointed money wages for his needs, so that he may take nothing from the manor but straw, hay, and firewood.

The bailiff must see that there be good watch at the granges over the threshers, and that the corn be well and cleanly threshed, and that the straw be well saved in good stacks or cocks well covered, and that no forage be sold from the manor, but let the forage and ferm, if there be any, be thrown in marshy ground or in roads to make manure. And no stubble should be sold from the manor, but let as much as shall be wanted for thatching be gathered together, and the rest remain on the ground and be ploughed with the ploughs.

And the bailiff ought to oversee the ploughs and the tillage, and see that the lands are well ploughed with small furrows, and properly cropped, and well sown with good and pure seed, and cleanly harrowed; and all the winter seed may be bought by warrant of the writ of the lord or seneschal, for this is a point that must hare warrant; and all the spring seed may be sown from his own store, if cheapness does not prevent him by the order from a writ.

Let nothing on the manors which onght to be sold be taken by the people, but let it be sent to fairs and markets at several places, and be inspected and bargained for, and whoever will give the most shall have it; for it is not chattel of death, or of war, or sold from the king's pinfold.

No seneschal or bailiff, or servant, or provost, or bedel, or hayward, should take for money, or through any sale, anything from the manors of which he is keeper ; for they ought not, by right, to buy the things or take for price what they themselves ought to make profitable and sell. No bailiff shall allow any horse or aver, ox or cow, young beast, wether or ewe, or hog in his charge to be flayn before it be seen for
defaute il sont morz car chinal o auer par defaute de garde put estre peri en mot de manires o par coru as iumenz ou estre neez par tomber en fosses ou en ewe estre neez par autre cas ou la charrette chargee put reuerser e neyer ${ }^{1}$ le chiual ou le charretter put creuer le oyl ou debriser la iambe o la quisse par vnt le chiual ou le affre est perdu e ausint de bof e de vaches e de totes autre bestes.

Le bailliff deit ver e comander en aust par les maners

[^39]what default it died. For, from want of guard, a horse or aver may perish in many ways-by running to the mares, or be drowned by falling into ditches or water, or be hurt in some other way; or the loaded cart may overturn and hurt the horse, or the driver may put out its eye or break its leg or thigh, whereby the horse or the aver is lost. And so with oxen, and cows, and all other beasts.

The wethers and ewes and hogs, by want of guard, may be killed or hurt by dogs or stolen ; and the wethers and ewes may struggle and be strangled, and then the keepers shall say that they died by violence, or they may be sold and killed, for although it is a chance for this it is good to have an inspection, for one can quickly know a fresh carcase and a fresh skin. And if the shepherd can acquit himself, before one who knows little, of ten carcases or twenty oxen stolen or taken in the way mentioned, by returning the skins, he has a good bargain.

And the bailiff ought, after shearing, to cause all the skins of all the sheep killed in the larder or dead of murrain to be brought before him, and then he can see how many are fresh and which are flayn without leare and inspection ; and then he must see that all the slins of the sheep are of one mark and that the wool and the skins match, and that the skins be not changed or bought, and then sell the skins with the wool. And the wool ought to be sold by sack or by fleece, according as he shall see there is the greatest profit and advantage. And if he sell by sack, each sack shall weigh xxx stone of wool by touch, or xxviij stone by stone and balance, well weighed by the right stone of twelve pounds. And the bailiff, or some one in whom he trusts, should be every year at the selling and tithing of the lambs and at the tithing of the wool and skins, because of fraud.

The bailiff ought, in August, to see and command
ke les bleez soient nettement quilliz e siez e ouel e ke la ganele e les garbes soient petit e si put le[m les $]^{1}$ ble plus tost secchir e la meyne garbe si put em meuz charger tasser e batre car il iad greignure perte en la grant garbe ke en la petite.

Le baillif deit apres la seint Johan fere trere hors touz le veuz boefs e les febles malement endentez e tote les villes raches e le febles e les baraignes e de jouenes auers ke crestre ne valent en bin e mettre les en bone pasture pur engressir esi vaudra donkes le piur on meillur e il deit tres foiz par an par gent ke seiuent del mestir fere ver toz les berbiz de sa baillie ce est a sauer apres la pasche pur la chaline de may e apres car donkes morent les berbiz puriz pur la chaline e toz ke lem troue iceles pur certein esproue de tuer ij ou iij de meilleurs e tant de milueins e tant de pires ou par esprone del oyl ou del laine ke sen deperte de la pel soient venduz one tote la leyne e autre foyz soient les veuz eles febles soient ${ }^{2}$ tret auant la gule de aust e soient mis en bone pasture pur engresser e quant les meillurs sont ankes amende e engressi si soient vendu as macegrefs ${ }^{3}$ si com lem put meuz car char de moton est plus coueitee e vendu adonkes ke apres le aust e tote le remeignant de creim ke ne put estre uendu adonkes seit vendu deuant la seint martin e la tirce foyz a la seint michel soient toz les berbiz treez car tot soient berbiz seins a la pasche e en may e deuant la gule de aust e apres si pount eles entre les deus festes de nostre dame par mauueise garde manger la teye de la nuele e les petiz blank limazons parunt eles porriront e moriront e pur ce vaut meuz ke lem se purueie auant de fere le pru de teles ou si non toz serront perduz.

## Del office de prouost.

Le prouost deit estre elu e presente par commun assentement de tote la vile pur le meillur hosebonde

[^40]throughout the manors that the corn be well gathered and reaped evenly, and that the cocks and sheares be small, so will the corn dry the quicker; and one can load, stack, and thresh the small sheaf best, for there is greater loss in the large sheaf than in the small.

The bailiff ought, after St. John's Day, to cause all the old and feeble oxen with bad teeth to be drafted out, and all the old cows, and the weak and the barren, and the young avers that will not grow to good, and put them in good pasture to fatten, so the worst shall then be worth a better. And he ought, three times a-year, to cause all the sheep in his charge to be inspected by men who know their business-that is, to wit, after Easter, because of the disease of May, and later, for then sheep die and perish by the disease; and all that are found so, by the sure proof of killing two or three of the best, and as many of the middling, and as many of the worst, or by proof of the eye or of the rool, which separates from the skin, let them be sold with all the wool. And again, let all the old and weak be drafted out before Lammas, and let them be put in good pasture to fatten, and when the best have presently mended and are fat, let them be sold to the butchers; so can one do well, for mutton flesh is more sought after and sold then than after August ; and let all the rest of the draft beasts which cannot be sold then be sold before Martinmas. And the third time, at Michaelmas, let all the sheep be drafted out; for although sheep are sound at Easter and in May and before Lammas, afterwards they can, between the two feasts of our Lady, by bad keeping, eat the web of the rime and the little white snails, from which they will sicken and die ; and for this it is good to provide beforehand to make profit of such, for if not all will be lost.

The office of protost.
The provost ought to be elected and present d hy the common consent of the township, as the best husbandman
e le meillur ${ }^{1}$ aprour des autres e il deit ver ke toz les serianz de la curt soient matin leuez a fere lor mester e ke les charues soient par tens iointes e les terres soient bin arez e bin ensonees e bin atornees e semez de bone e nette semence solom ce ke les terres vodront porter e il deit uer ke il eit bone faude de clayes de fust sor le dimaigne estramee chescune nuyt dedenz ${ }^{2}$ [por la terre amender]. ${ }^{3}$

Item il deit ver ke il eit bone faude a motons e vn autre a mereberbiz e la terce a hogastres solom ce ke il ad berbiz ele gardein de motons deit auer en sa garde ccce motons si la pasture seit large ou plus esi ele seit estrete meyns e le gardain de mereberbiz deit auer cce en large pasture e le gardain de hogastres ce e le prouost deit uer ke il soient bin gardez en pasture e en faude e en mesons. Le prouost deit uer ke les blez soient bin e nettement batuz issi ke rin ne remeigne [en] le estreim pur crestre sur les mesons ne en lor compost pur germir le testes ele croupes e les reimsailles de venture de van ${ }^{4}$ soient mis ensemble e batuz e soyt puis vente e mys al autre e prenge garde le prouost ke nul batur ne nule venteresse ne prenge del ble pur aporter en sein ne en ${ }^{5}$ huse ne en souler ne en burse pautenire ne en sak ne en sakelet musce pres de la grange e nul comble de ble ne seit mes receu de grange en gernir por acres fere mes de viij quarters soit pris le novime de tascurs par dreite mesure pur lacres ensi ke nul bussel ne nul demy bussel ne nul contel ne remeigne au prouost bar les bons baturs dehors la mesure auant dite car le combler e les bosseus e les demy busseus e les canteus e les remeignanz ke il vrent engerner sanz taille ou numbre engendrerent au seignur poy de pru e la semence lie remeint as champs de seme ke est porte al greignur ne deit pas autre foiz estre mesure ne taille e de ce deit le baillif fere prendre garde ke de la semence returnee e del comble de la mesure ne demy
and the best approver among them. And he must see that all the servants of the court rise in the morning to do their work, and that the ploughs be yoked in time, and the lands well ploughed and cropped, and turned over, and sown with good and clean seed, as much as they can stand. And he onght to see that there be a good fold of wooden hurdles on the demesne, strewed within erery night to improve the land.

And he ought to see that he have a good fold for wethers, and another for ewes, and a third for hogs, according as there are sheep. And the keeper of the wethers ought to hare in his keeping four hundred wethers if the pasture be large, or more, if it is narrow, fewer ; the keeper of the ewes ought to have three hundred in large pasture; the keeper of the hogs two hundred. And the provost ought to see that they be well kept, in the pasture, in the fold, and in houses. The prorost ought to see that the corn is well and cleanly threshed, so that nothing is left in the straw to grow in thatches, nor in manure to sprout. The husks, and the trampled corn, and the refuse of the winnowing, may be put together and threshed, and then winnowed and put with the other. And the prorost must take care that no thresher or winnower shall take corn to carry it away in his bosom, or in tunic, or boots, or pockets, or sacks or sacklets hidden near the grange. And no comble must be allowed from the grange into the garner to make increase, but for eight quarters let a ninth be taken from the stacks by right measure for increase. Also no bushel, or half-bushel, or cantle shall remain with the provost for the good threshers beyond the said measure ; for the comble, and the bushels, and the half-bushels, and the cantles, and others that they use in the garners without tally or number, bring little profit to the lord. And the seed which is left to sow the fields with, which is carried to the garner, ought not to be measured or tallied again ; and the provost ought to take care of this, that by the seed returned, and the comble of the measure, nor by half-bushels or cantles
busseaus ne de canteaus porte en gernir ne seit fet damage al seignur par le prouost ou par autre car cele manire vnt il vse pur riwele generale. Ne nul baillif ne prouost ne face uente de ble ne de estor sanz garant de bref fors del creim de bestes e des berbiz ke deit estre treet hors si com est auantdit.

Nul forage del maner ne litire soyt uendu par prouost ne par autre mes le forage soit bin garde iekes lem eit mestir de prendre le a la sustenance des auers issi ke nul ble ne seit batu par la defaute de forage e la litire e la feugire soient quilliz ensemble e getthe en chimins e en les rues pur composter fere. Item le prouost deit uer souent ke tote les bestes soient bin forages e gardez si com estre deinent e ke il eient asez de pasture sanz surcarke de autre bestes e il deit enquere ${ }^{1}$ ke les gardeins de tote manire de bestes ne aillent a feres ne a merchiz ne a lute ${ }^{2}$ ne a tauerne par ont ke les bestes auant diz augent estraez sanz garde ne ne facent damage au seignur ne a autre mes il deyuent conge demander e mettre gardains en lur lius ke damage ne atuenge e si damage auenge ou perte soient les amende prises des gardeins e les damages renduz. Item nul pronost neit poer de pleder nul pene ${ }^{3}$ de nuly amercier mes ly ou le hayward ou le bedel receyrent les pleintes e facent les attachemenz e liurent al baillif. Item nul prouost ne deit mettre ne soffrir ke nul homme eit liureson ${ }^{4}$ si il nel eit deserui ne il ne deit soffrir ke il ieit surcarke de surdeies en la dayerie ne ke eus ne aportent hors de la dayerie formage burre let ne cruddes en apeyrement de la dayerie ne en decres del formage. Item nul prouost ne remeigne outre in an prouost si il ne soit esprone pur mut aprowant e leaus en ses fez e bon hosbonde. Chescun prouost deit chescum an ${ }^{5}$ aconter one son baillif e tailles les oueraignes e les custumes despendues en le maner par rnt il peussent del surplus en deners certeynement respondre sur lur aconte car autant uaut le dener de custume come de rente.

[^41]carried into the garner there be harm to the lord by the provost or any other, for this they do as a general rule. And no bailiff or provost shall sell corn or beast without warrant by writ, except the draft beasts and sheep, which ought to be drafted out as is aforesaid.

No forage or litter of the manor may be sold by the provost, or by another, but the forage must be well kept until it is necessary to take it for the sustenance of the beasts, that no corn may be threshed for want of forage ; and let litter and ferns be gathered together and thrown in roads and paths to make manure. And the provost ought often to see that all the beasts are well provided with forage and kept as they ought to be, and that they have enough pasture without overcharge of the other beasts, and he ought to see that the keepers of all kinds of beasts do not go to fairs, or markets, or wrestling-matches, or taverns, by which the beasts aforesaid may go astray without guard, or do harm to the lord or another, but they must ask leave, and put keepers in their places that no harm may happen ; and if harm or loss do come about, let the amend be taken from the keepers and the damage made good. Let no provost have power to hold pleas involving penalty or amerciament, but he or the hayward or the bedel may receive the plaints and make the attachments and deliver them to the bailiff. And no provost ought to permit or suffer any man to have his allowance if he be not deserving, nor ought he to allow any overcharge of under-dairywomen in the dairy, nor shall they carry from the dairy cheese, butter, milk, or curds, to the impoverishment of the dairy, and the decrease of cheese. Let no provost remain over a year as provost, if he be not proved most profitable and faithful in his doings, and a good husbandman. Each provost ought every year to account with his bailiff, and tally the works and customs commuted in the manor, whereby he can surely answer in money for the surplus in the account, for the money for customs is worth as much as rent.

Le baillif e le prouost deiuent souent ver tote les defautes de mesons de lur baillie e de murs e de fosses de hayes de chars de charrettes de charues de herces de faudes e de totes autre costages ensi ke lur purueance tant face ke il ne coueigne mie par lor defaute en le ouraigne de sij denirs perdre i mare car chescone chose raut solom ce ke ele est gwiee. Item nul prouost al maner ne teigne table pur receyure les alanz e les venanz au custages le seignur sanz especial comandement ${ }^{1}$ par bref car si ceus del ostiel le seignur reignent par les maners pur lur propre bosoignes le seignur ne les deit pas souder pur lur preu fere e si il reignent par iloques si pregnent lor costages de la garderobe le seignur auant ke il voisent nule part e pur ce nest pas mester de fere dews damages de in fet enul chiual ${ }^{2}$ ne nul sergant ne garson ne autre ne seit receu a nul maner par nul baillif ne par nul prouost pur soriorner as costages le seignur sanz garant car rin sur acunte de ceus costages ne lur deit estre alowe.

## Le office del hayward.

Le hayward deit estre vigerous homme apres car il deit tart e tempre espeyer e auironer e garder le boys les blez e les preez e totes autre choses ke touchent sa baillie e deit les attachemenz e les aprouemenz leaument fere e par deuant le prouost fere la delinerance par plegges e liuerer les a son baillif apleder il deit les terres semer e estre outre les charuers e les hercers en tens del rn e del antre semence e il deit fere venir les priez e les custumers dues e usees pur fere les ouraignes ke fere deyuent. E il deit en feneison estre outre les fauchurs le leuer e le carier e en aust ensemblez les siors eles priez e les ouraignes e ver les bleez estre quilliz bin e nettement e tart e tempre garder issi ke point ne seit emble ne par auers mange ne defule e il deit tailler encontre le prouost tote la semence e les prieres e les custumes e les ouraignes ke fere deyuent en le

[^42]The bailiff and prorost must often see all the disrepairs of the houses in their charge, also of walls, ditches, hedges, carts, waggons, ploughs, harrows, folds, and all other costs, so that their foresight may do so much that it be not necessary through their fault to lose a mark for a matter of trelre pence; for each thing is valuable according as it is looked after. And no prorost on a manor may keep table to receive goers or comers at the lord's cost, without special commandment by writ, for if those of the lord's house come to the manors on their orn business, the lord need not pay them for their profit, but if they come there, let them take their expenses from the lord's wardrobe before they go anywhere, because there is no need to do two mrongs for one business. And no knight, or serrant, or groom, or any other may be received on any manor by any bailiff or any prorost to sojourn at the lord's expense without writ, for at the account nothing shall be allowed them for the expenses of these.

The office of hayward.
The hayward ought to be an active and sharp man, for he must, early and late, look after and go round and keep the woods, corn, and meadows and other things belonging to his office, and he ought to make attachments and approvements faithfully, and make the delivery by pledge before the provost, and deliver them to the bailifi to be heard. And he ought to sow the lands, and be over the ploughers and harrowers at the time of each sowing. And he ought to make all the boon-tenants and customary-tenants who are bound and accustomed to come, do so, to do the work they ought to do. And in haytime he ought to be over the mowers, the making, the carrying, and in August assemble the reapers and the boon-tenants and the labourers and see that the com be properly and cleanly gathered; and early and late watch so that nothing be stolen or caten by beasts or spoilt. And he ought to tally with the provost all the seed, and boon-work, and customs, and labour,
maner par tot le an $e^{1}$ quei il amonte le baillif taille e aconte donkes deyuent il del remeignant sur acunte respondre.

Le office del seignur. ${ }^{2}$
Le seignur deit amer deu e dreiture e estre leaus e ueritable en ses diz e en ses feze deyt hayr peche tort e mauueste. Le seignur ne se deit pas fere consailler de jouene plein de jouene sank ne de volantrif corage ke poy ou nient seyuent de fet ne de nul treslor loseingor ne de gabour ne de nul tel ke porte tesmoygne al estrenner mes il se deit consiller de prodeshommes e de leale genz e de meur age ky not mut reu e mut seu e ke ont este renumee de bon los e ke rnkes ne furent de tricherie ne de nule mauneste ateinz ne conuencuz ne pur amur ne pur hange ne pur pour ne pur manace ne pur gain ne pur perte ne se flecchereient hors de uerite pur consaillier lur seignur a escient a son damage fere.

Le seignur deit comander e ordiner ke ses acuntes soient oy chescun an mes pas en vn lyu mes par toz ses maners kar la put lem apertement sur la chose sauer e estendre le pru e le damage e il deit comander e ordiner ke nul baillif ne seit a table par les maners fors a furfet pur deners ensi ke rien ne prenge des maners fors fein busche e litire e ke nul priue estrange ne del osteil le seignur ne de aillours soit receu as maners sur le costage le seignur ne rien ne lur seit liure ne done sanz garant del bref for ce ke le baillif ou le prouost uodront aquiter de lur burses pur lur grant custages ke lem met sanz reson si com lem put ver desouz en $\mathrm{vn}^{3}$ chapitre.

Le seignur deit enquere par le sins e par autres a ses maners quant il yunt de son seneschal e de ses purueiances e de ses apruemenz fetes par ses venues en memes la manire deit il enquere des pruz e des damages ${ }^{4}$ par le baillif e par

[^43]which ought to be done in the manor throughout the year, and what it amounts to the bailiff tallies and accounts for, and they ought to answer on the account for the rest.

The office of the lord.
The lord ought to love God and justice, and be faithful and true in his sayings and doings, and he ought to hate $\sin$ and injustice, and evil-doing. The lord ought not to take counsel with young men full of young blood, and ready courage, who know little or nothing of business, nor of any juggler, flatterer, or idle talker, nor of such as bear witness by present, but he ought to take counsel with worthy and faithful men, ripe in years, who have seen much, and know much, and who are known to be of good fame, and who never were caught or convicted for treachery or any wrong-doing; nor for love, nor for hate, nor for fear, nor for menace, nor for gain, nor for loss, will turn aside from truth, and knowingly counsel their lord to do him harm.

The lord ought to command and ordain that the accounts be heard every year, but not in one place but on all the manors, for so can one quickly know everything, and understand the profit and loss. And he ought to command and ordain that no bailiff have his food in the manors except at a fixed price in money, so that he take nothing from the manors but hay, firewood, and straw ; and that no friend, stranger, nor anyone from the lord's hostel or elsewhere be received at the manors at the lord's expense, nor shall anything be given or delivered to them without warrant of writ, unless the bailiff or prorost wish to acquit it from their own purses for the great expense one is umnecessarily put to, as can be seen above in another chapter.

The lord ought to inquire by his own men and others on his manors as many as there are, about his seneschal and his doings, and the approvements he has made since his coming; in the same way he ought to inquire about
le prouost e quant il aura anserche del wn e del autre il deit demander ses acumturs e ses roules del acunte e donkes deit il ter e enquere ky ad bin fet e ky nun e ky ad aprue e ky non eky ad fet prue ky nun pru e amenusement e ceus ke il a donkes troua bons e leaus e apruanz il les retigne e face le pur quey e si nul y seit troue ke eit damage fet e nient aprue respoigne de son fet e auge adeu e si le seignur teigne les formes auant dites si put chescun seignur prodomme viure honestement e estre a son desir riches e manant sanz peche e tort a nuly ne fra.

Le seigntur deit comander ke les acunturs par les maners oyent les pleintes e les torz de chescoyn ke se pleint del seneschal ou del baillif ou del proust ou del hayward ou de autre ke del maner seit e ke pleinre dreiture set tenue a frank e a rilain costumer e as autres pleintifs si com par enqueste put estre ateint e ke les acunturs facent dreit en lur peril.

## Le office des acounturs. ${ }^{1}$

Les acunturs deiuent estre leaus sages e bin sachanz le mestir e tote les chapitres e les articles ${ }^{2}$ al acunte en rentes en mises en issue de grange e en estor en totes autre choses ke il iapendent. Item les acuntes deyuent estre oy a chescun maner e donke porra lem satuer le prue le damage e les fiez e les aproemenz del seneschal del baillif e del prouost e des autres car quant ke il rnt fet ${ }^{3}$ de pru ou de damage purra estre veu par lacunte en rn jour ou en deus e donkes porra il legirement rer le sen ou la folie des auant dit senechaus baillifs pronostz e donkes pount les acunturs prendre enquestes de fez dont il sont en doutes e oir les pleintes de chescoin plentif e fere les amendes.

Le seneschal deit estre aioint as conturs ne mye com souerein ne com compaignon del acunte mes com collateral

```
' Inserted from (13). = [qe apendent.] }\mp@subsup{}{}{3}\mathrm{ [de denz un an.]
```

profits and losses from the bailiff and provost, and how much he will have to seek from both. He ought to ask for his auditors and rolls of account, then he ought to see who has done well and who not, and who has made improvement and who not, and who has made profit and who not, but loss, and those he has then found good and faithful and profitable, let him keep on this account. And if anyone be found who has done harm and is by no means profitable, let him answer for his doing and take farewell. And if the lord observe these said forms, then will each lord live a good man and honestly, and be as he will rich and powerful without sin, and will do injustice to no one.

The lord ought to command the auditors on the manors to hear the plaints and wrongs of everybody who complains of the seneschal, or provost, or hayward, or any other who is of the manor, and that full justice be done to franks and vileins, customary-tenants, and other plaintiffs, such as by inquest can be had; and that the auditors do right at their peril.

## The office of the auditors.

The auditors ought to be faithful and prudent, knowing their business and all the points and articles of the account in rents, in outlays, in returns of the grange and stock, and other things belonging thereto. And the accounts ought to be heard at each manor, and then one can know the profit and loss, the doings and approvements of the seneschal, bailiff, provost, and others, for as much as they have done of profit or loss can be seen by the account in a day or two, and then can soon be seen the sense or the folly of these said seneschals, bailiffs, and provosts; and then can the auditors take inquest of the doings which are doubtful and hear the plaints of each plaintiff and make the fines.

The seneschal ought to be joined with the auditors, not as head or companion of the account, but as subordinate,
car il deit respondre a les aconturs sur lacunte de ses fez e de ses comandemenz e de ses apruemenz par li fet as maners
de ses custages bosoignables si com rn autre le baillif e le prouost soient ioint ensemble de rendre lor acunte de chescun maner plenerement de tote choses ke touchent les maners en rentes en mises en totes autre issues car nest pas reson ke le prouost ky chateus sunt au seignur e ke mut meins deit sauer par reson ke le baillif seit puni ne respoigne pur les fez le baillif desicom le baillif est a custages le seignur e a les comandemenz e les auantages e les prises ${ }^{1} e$ est son chef e son souerein e deit le maner e le pronost par son seu e par son apruement guier e garder e toz les autres ke al maner apendent.

Les acunturs deiuent defendre sur le acunte au baillif ${ }^{2}$ ke nul comble de ble ne seit mes receu de grange engerner mes ke lem prenge is quarters pur viij par certeine mesure estrike de tascurs e ke les busseus e les demy busseus e les canteus e les remeignanz ke soleient estre musee e oblie e le auantage le prouost hors de taille soit tot taille e tot acunte $e^{3}$ lautre car il raut meuz de auer mo poy de gite de gerner ke tant perdre par an ke mult amunte par an ke ben le aperceit. E il deyuent defendre as baillifs e as prouostz ke nul chiual ne nul auer ne nul boef ne nule vache ne nul iouene auer ne nul moton ne nul mereberbiz ne nul hogastre a mul manir soit escorche sanz reue e seu par quel defante il morut pur le peril de sus dit il ne conent pas issi dire a les aconturs sur le acunte fere par la reson de lur office car il deyuent estre si sages e si leaus e si sachant del mester ke il ne eient nul mester de autre aprise de chose ke touche le acunte.

\end{array}
$$

for he must answer to the auditors on the account for his doings and for his commandments and approvements done by him on the manors and for necessary expenses, just as another. Let the bailiff and the provost be united to render their account of each manor fully, for all things relating to the manors in rents, outlays, and all other returns, for it is not right that the provost, who is the lord's chattel, and who reasonably must know much less than the bailiff, should be punished or answer for the doings of the bailiff, as the bailiff is in the pay of the lord and in commandments and advantages and presents is his head and superior, and ought by his sense and instruction to direct and keep the manor and the provost and all who belong to the manor.

The auditors ought on their accomnt to the bailiff to forbid that any comble of corn be received from the grange into the garner, but that one takes nine quarters for eight by sure measure striked from the stackers, and that the bushels and half-bushels and the cantles and the rest which were wont to be hidden and forgotten, and are to the adrantage of the provost if not tallied, be all tallied and all accounted for with the other, for it is much better to have a little waste of the garner than lose so much a year, which will amount to much yearly as may be clearly seen. And he must forbid through the bailiffs and provosts that any horse or aver, ox, cow, young aver, wether, ewe, or hog be in any wise flayn without inspection and knowledge of the fault by which it died, for the peril mentioned above. It is not necessary so to speak to the auditors about making andit because of their office, for they ought to be so prudent, and so faithful, and so knowing in their business, that they have no need of other teaching about things connected with the account.

## Le office des charuers.

Les charuers deiuent estre genz de conisance ${ }^{1}$ e deiuent sauer semer e les caruers e les herces depescees reperailler e amender e la tere bin gaigner e ensesoner e deyuent sauer ouelement les boefs iondre e chacer sanz ferir ne damager e il les deyuent bin forager e le forage bin garder ke il ne soit emble ne aporte e en prez e en pastures seuerales sauuement garder e autres auers ke dedenz son trouez deyuent enparker e eus e les tenurs deiuent fosser ${ }^{2}$ en clore ${ }^{3}$ batre e les teres remuer e fosser pur les teres achechir e les ewres asseuer ne il ne deyuent nul boof escorcher iekes lem eit reu e enqueres par quele defaute il morat ne il ne deiuent en les boueries nul feu aporter pur alumer ne pur eus memes eschaufer ne nule chandeile leinz alumer ne auer si il ne seit en lanterne e pur grant mestir e peril.

Ne nul charetter ne porte fu ne chandeile en les estables si la chandeile ne seit en lanterne e ce pur grant mester e donkes seit porte e garde

[^44]
## The office of ploughien.

The ploughmen ought to be men of intelligence, and ought to know how to sow, and how to repair and mend broken ploughs and harrows, and to till the land well, and crop it rightly; and they ought to know also how to yoke and drise the oxen, without beating or hurting them, and they ought to forage them well, and look well after the forage that it be not stolen nor carried off; and they ought to keep them safely in meadows and several pastures, and other beasts which are found therein they ought to impound. And they and the keepers must make ditches and build and remove the earth, and ditch it so that the ground may dry and the water be drained. And they must not flay any beast until some one has inspected it, and inquired by what default it died. And they must not carry fire into the byres for light, or to warm themselves, and hare no candle there, or light unless it be in a lantern, and for great need and peril.

## The office of waggoners.

The waggoner ought to know his trade, to keep the horses and curry them, and to load and carry without danger to his horses, that they may not be overloaded or overworked, or overdriven, or hurt, and he must know how to mend his harness and the gear of the raggon. And the bailiff and provost ought to see and know how many times the waggoners can go in a day to carry marl or manure, or hay or corn, or timber or firewood, without great stress; and as many times as they can go in a day, the waggoners must answer for each day at the end of the week. No waggoner or other shall cause a cart-horse or aver to be flayn without inspection and the command of his superior, until it be known why and for what default it died, as is said above. And no waggoner shall carry fire or candle into the stables, unless the candle be in a lantern, and this for great need, and then it must be carried and watched by
par autre ke par ly. Chescon charretter gise chescune nuyt oue les chiuaus e prenge tele garde dont il uoudra sanz damage respondre e ensi les bouers gisent en meymes la manire oue lur boefs.

Le office le racher.
Le wacher deit estre conisant de son mester sachant e bin gardant ses raches e bin deit norrir les reaus de sa seuerison. Il deit uer ke il eit tors beaus e granz e bin aligees ${ }^{1}$ pastures les vaches pur curre quant il vodront e ke nule tache ne treez ne lete outre le seint michil pur fere formage de regain car cel leter e cel rewain fet les vaches amegrir e afeblir e les fet curre plus tart moutre an ${ }^{2}$ e le let en est le meillur e la vache plus poure e il deit uer ke ses auers soient bin forages e bin gardez en yuer e en este si com il roudra ${ }^{3}$ ne nule rache ne nul auer ne soit escorche einz ke son souerein le eit veu e sache par quele defaute il morut. Ne nul fu ne nule chandeile ne seit porte en la vacherie fors en la forme auant dite ebin face chescun an de chescune racherie trere le ville raches malement endentez e les baraignes e le creim de jouenes auers ke crestre ${ }^{4}$ en bin ne rolent soient ${ }^{\text { }}$ venduz en la forme auant dite e le rachir mette chescune nuyt les vaches e les autres auers en la faude en la seson e la faude soit bin estrame de litire ou de feugire si com desus est dit e il meymes i gise les nuyz oue ses vaches.

## Le office de porchir.

Le porchir deit estre a les maners la ou les pors pount estre sustenu e garir en foreste ou en boys ou en sauagine ou en marass sans sostenance de la grange e si les porz pount estre sustenuz oue petite sustenance de la grange en

[^45]another than himself. Each waggoner shall sleep every night with his horses, and keep such guard as he shall wish to answer for without damage; and so shall the oxherds sleep in the same way with their oxen.

## The office of cowherd.

The cowherd ought to be skilful, knowing his business and keeping his cows well, and foster the calves well from time of weaning. And he must see that he has fine bulls and large and of good breed pastured with the cows, to mate when they will. And that no cow be milked or suckle her calf after Michaelmas, to make cheese of rewain; for this milking and this rewain make the cows lose flesh and become weak, and will make them mate later another year, and the milk is better and the cor poorer. And he ought to see that the arers be well supplied with forage, and well kept in winter and summer, as he shall wish to answer, and that no cow or aver be flayn before his superior has seen it and known by what default it died. And no fire or candle shall be carried into the cowhouse, except in the manner aforesaid. And every year, from each vaccary, cause the old cows with bad tecth, and the barren, and the draft of the young avers that do not grow well to be sorted out that they may be sold in the way aforesaid. And every night the cowherd shall put the cows and other beasts in the fold during the season, and let the fold be well strewed with litter or fern, as is said abore, and he himself shall lie each night with his cows.

## The office of swineherd.

The swineherd ought to be on those manors where swine can be sustained and kept in the forest, or in woods, or waste, or in marshes, without sustenance fromi the grange ; and if the swine can be kept with little sustenance from the grange during hard frost, then must a pigsty bo
grant gelee a donkes soit porcherie fete en marais ou en boys ou les pors isoient nuyt e iour e donkes quant les troyes vnt purceus one les plus febles porz soient chace as maners e soient sustenu des eschetes tant com la forte gelee dure ele mau tens e puys rechaces arire as autres ${ }^{1}$ e si il nyad boys, mareys, ne sauagine, ou les pors se pount sustenir sanz tot estre sustenu de la grangre. Nul porcher ne pork ne seit au maner for tant solement ${ }^{2}$ ke peussent estre sustenuz en aust del estoble e des eschetes de grange e quant lem bat les blez pur vendre e ausi tost com il sont en bon point e amendez soient renduz kar ky ke reut sustenir les pors par an tot des costages de la grange e acunter les costages a la liureison des pors e ${ }^{3}$ del porchir ensemblement oue les damages ke il font par an de blez dews tant plus perdra ke il ne gaignera e ce put lem legirement ver ky acunter voudra.

## Le office del berchir.

Chescun berchir deit trouer bon plegges de respondre de ses fez e de bin seruir e leaument tot seit il meymes compaignon al mouner e il deit couerir sa faude e treiller e amender dedenz e dehors e les treches ${ }^{4}$ reperailler e fere e il deit gisir a la faude ly e son mastin. E il deit ses berbiz bin pestre e bin strager e bin garder ke eles ne seient morz ne detrez ${ }^{5}$ de chens emblez ne adirez ne changer ne ke eles ne pessent les mores ne les siches ne betumees por receyure enfermetez e puriture par defaute de garde. Nul bercher ne deit departir de ses berbiz pur aler a feyres ou a marchiz ou a lutes ne a veilles ne a la tauerne sanz conge prendre ou demander e sanz bon gardain de mettre en son liu pur les berbiz garder ke nul damage ne vigne par sa defaute.

Toz les berbiz le seignur soient merche de mn merch e nule mere berbiz ne seit trete outre la feste de nostre dame ${ }^{6}$

```

' cleyes.
* [kant.]
* ne destruz ne vourez.
3 les solz.] ' la Natyuite.
```

made in a marsh or wood, where the swine may be night and day. And then when the sows hare farrowed, let them be driven with the feeble swine to the manors and kept with leavings as long as the hard frost and the bad weather last, and then driven back to the others. And if there is no wood or marsh or waste where the swine may be sustained without being altogether kept on the grange, no swineherd or ssime shall be on the manor, except only such as can be kept in Augnst on the stubble and learings of the grange, and when the corn is threshed for sale, and as soon as they are in good condition and well, let them be sold. For whoerer will keep swine for a year from the cost of the grange alone, and count the cost and the allowance for the swine and swineherd, together with the damage they do yearly to the corn, he shall lose twice as much as he shall gain, and this will soon be seen by whoever keeps account.

## The office of shepherd.

Each shepherd ought to find good pledges to answer for his doings and for good and faithful service, althongh he be companion to the miller. And he must cover his fold and enclose it with hurdles and mend it within and without, and repair the hurdles and make them. And he ought to sleep in the fold, he and his $\log$; and he ought to pasture his sheep well, and keep them in forage, and watch them well, so that they be not killed or destroyed by dogs or stolen or lost or changed, nor let them pasture in morrs or dry places or bogs, to get sickness and disease for lack of guard. No shepherd ought to leave his sheep to go to fairs, or markets, or wrestling matches, or wakes, or to the tavern, without taking leave or asking it, or without putting a good keeper in his place to keep the sheep, that no harm may arise from his fault.

Let all the lord's sheep be marked with one mark, and let no ewes be milked after the feast of our Lady,
car eles curent plus enviz ${ }^{1}$ vn autre an e les aigneus raudrent le meyns. E nul berbiz ne soit escorche auant ke lem le eit veu e seu par quele defaute ele morut car si la mereberbiz murt deuant tondeison si deit la pel valer vn toyson e si ele mort apres tondeison si deit le berchir respondre del aignel e de la toyson e des carcoys de seison de la pelette e si moton murt deuant tondeison lem deit respondre de the bone pel e del carcoys si il est de seson e si il est apres tondeison lem deit respondre de la toyson e del carcoys de seison e de la pelette e ausi de hogastre. Nul aignel ne soit done me merche ne nule leyne ne nule pel ne soit done si par deuant le baillif non bon chastriz e de bone lene soient ouekes les mereberbiz en la seison de curre de ${ }^{2}$ mereberbiz e les motons e les hogastres soient veu iij foiz par an par gent ke seiuent del mester ele creim treet e vendu en la forme auant dite.

## Le office de la dife.

La daye deit estre lele e de bon renom e nettement porter sey e deyt sauer le mester e ce ke il li apent ne ele ne deit soffrir ke suzdaye ne autre ne preignent ne hors portent let ne bure ne creyme ${ }^{3}$ par ont le formage soit. amenuse e la dayerie emperee e le deit bin sauer fere formage $e^{4}$ saler formage ele deit sa ressele de la dayerie sauuer e garder ensi ke ne couigne mye chescun an nouele achater. E il deit sauer le iour quant ele comence de fere formage e de queyl poys e quant ele comence de fere $\mathrm{ij}{ }^{5}$ formages ele iour de combin e de queil peis e donkes deit le baillif e le prouost rer sonent la dayerie e les formages quant il crest e decrest e le peys e ke nul damage ne seit fet en la dayerie ne nul larcin par ont le peys seit amenuse ${ }^{6}$ e il deyuent sauer e espruer e

[^46]for they will mate more tardily another year, and the lambs shall be worth less; and let no sheep be flayn before it be seen and known for what fault it died, for if the ewe die before shearing then must the skin be worth a fleece, and if it die after shearing then the shepherd must answer for the lamb and the fleece and the fresh carcase with the skin. And if a wether die before shearing, he must answer for a good skin and for the carcase, if it be fresh; and if it be after shearing he must answer for the fleece and for the fresh carcase and the skin and the hog. Let no lamb be given or marked, nor any wool or skin be given, unless before the bailiff. Let good gelded sheep with good wool be with the ewes at the time of maing. Let the ewes and the wethers and the hogs be inspected three times a year by men who know their business, and the draft picked out and sold in the way aforesaid.

## The office of dairymaid.

The dairymaid ought to be faithful and of good repute, and keep herself clean, and ought to know her business and all that belongs to it. She ought not to allow any underdairymaid or another to take or carry away milk, or butter, or cream, by which the cheese shall be less and the dairy imporerished. And she ought to know well how to make cheese and salt cheese, and she ought to save and keep the vessels of the dairy, that it need not be necessary to buy new ones every year. And she ought to know the day when she begins to make cheese and of what weight, and when she begins to make two cheeses a day, of how much and of what weight, and then the bailiff and the provost ought to inspect the dairy often and the cheeses, when they increase and decrease in weight, and that no harm be done in the dairy, nor any robbery by which the weight shall be lessened. And they ought to know and prove and
ver quant des vaches funt la perre de formage e de burre e quant de mereberbiz la perre de ce meymes ke il peussent le plus seurement respondre ${ }^{1}$ sor lor acunte. Nule vache ne seit tretee ne letee outre la seint mychil. Ne nule mereberbiz outre la feste de nostre dame ${ }^{2}$ par la reson auantdite.

La daye deit ayder a uenter les blez quant ele put entendre e ele deit prendre garde des oues e des gelines e respondre des issues e garder e couerir le feu ke damage ne auenge par defaute de garde.

[^47]Ci finist la seneschaucie.
see when the cows make a stone of cheese and butter, and when the ewes make a stone of the same, that they may be able the more surely to answer in the account. No cow shall be milked or suckled after Michaelmas, and no ewe after the feast of our Lady, for the reason aforesaid.

The dairymaid ought to help to winnow the corn when she can be present, and she ought to take care of the geese and hens and answer for the returns and keep and cover the fire, that no harm arise from lack of guard.

Here ends the book of the office of seneschat.

# LES REULES SEYNT ROBERD 

ROBERT GROSSETESTE.

## LES REULES SEYNT ROBERD.

Sci comencent les reules qe le bon Eueske de Nichole seynt Robert Groseteste fist a la Contesse de Nichole de garder e gouerner terres e ostel qy vodra ceux reules bien e bel tenir du soen demeyne porra viure e sey memes e les soens susteyner.

La premere reute enseigne coment seygnur ou dame purra sauer en chescun maner de totes ses teres par lour parceles totes ses rentes custuaes usages SERUAGES fraunchises feez e tenemenz.

En dreit de ros foreyns teres a comencement fetes purchacer le bref le rey de enquere par serement de xij franche homes en chescun maner totes les teres par lour parceles totes les rentes custumes rsages seruages fraunchises vos feez e vos tenemenz e coe seyt ententiuement enquis e loyamment par les plus leans e les plus sachamz des francks e vilayns e destinctement enroule issi ke roster seneschal souereyn eyt the roule $e$ vos vn autre enter e chescun baillif eyt coe qe pertient a sa baillie e si pleyntifs vignent a vous pur tort qe lem lour face ou demaunde rous meymes a gardez vos roules endreyt de cel maner dount le pleyntif est e solom coe responez e festes tener dreyture.

Apres festes fere sanz delay dreyt enqueste e emrouller en in autre roule distinctement trestouz ros maners en

## THE RULES OF SAINT ROBERT.

Here begin the rules that the grood bishop of Lincoln, S. Robert Groseteste, made for the Countess of Lincoln to guard and govern her lands and hostel: whoever will keep these rules well will be able to live on his means, and keep himself and those belonging to him.

The first rule teaches how a lord or lady shall know in Each manor all their Lands by their parcels, all their rents, custous, usages, services, franchises, FEES, AND TENEMENTS.

Touching your foreign lands; to begin with, buy the king's writ, to inquire by the oath of twelve free men in each manor all the lands by their parcels, all the rents, customs, usages, services, franchises, fees, and tenements, and let this be carefully and lawfully inquired into by the most loyal and wisest of the freeholders and villeins, and distinctly enrolled, so that your chief seneschal may have one whole roll, and you another, and let each bailiff have what belongs to his baillie. And if plaintiffs come to you for wrong that anyone has done them, or petitioning, first look yourself at the rolls of that manor to which the plaintiff belongs, and according to them give answer and maintain justice.

The second rule teaches how you may know by comion inquest what there is on each manor, moveable or not moveable.

Next, cause to be made without delay right inquest, and enrol distinctly in another roll every one of your

Engeltere chescun par say quant vos purrez e quantes des carues vos auetz en chescun liu petit ou graunt e quantes vos purrez auer quantes des acres de tere gaynable quantes de pree com bien de pasture a berbitz e com bien a vacches e issi a totes maners de auters par certeyn noumbre e com bien de moeble vos auetz en chescun liu de vife auer e retenez cel roule od rous e souent regardez le premer roule e cestuy ausi qe prestement sachetz trouer coe dount aueretz afere. Trestouz vos serganz de maners seyent a certeyn soudz de deners e apres le august vos graunges seyent closes.

La tierce reule enseigne lareisounement qe le seigNUR OU DAME DEYT FERE A SON HAUT SENESCHAL DEUANT ACUNS DE TES BONS AMYS.

Kaunt les auantdites roules e enquestes serrunt fetes e si tost com vos purrez ela pur trauail de genz ne seyt lesse apele uostre graunt seneschal deuant acune genz de ky vos affiez e luy dytes issi. Beau sirre vos reez bien ke pur mon dreyt esclarsir e pur sauer plus certeynement le ostat de ma gent e de mes teres e quey ioe pusse desore enauaunt del men fere e quey lesser ioe ay fet fere ces enquestes e ces enroulemenz ore empri com a cely a ky ioe ay baille quant ke ieo ay desoutz mey agarder e gouerner e estreytement rous comaunde ke totes mes dreytures fraunchises e mes possessions neent moebles gardez enteres samz blemure e coe qe par paresce de autres ou par tort est sustret on amenuse des auantdites choses a tut rostre poer repelez e mes biens moebles e mes estores par honeste e dreyturele manere multipliez e leaument gardez e les issues de mes teres rentes e moeble sanz boisdye e de leal amenusement fetes renir a mey memes e a ma garderobe a despendre solom coe ke ioe quideray qe deu seyt pae e mon honur e mon pru igise par purueaunce de mey e de vous e de mes autres amys. De autre part ieo ros comaund
manors in England, each by itself, how many ploughs you have in each place, small or great, and how many you can hare: how many acres of arable land, how many of meadow, how much pasture for sheep, and how much for cows, and so for all kind of beasts according to their number; and what moveables you have in each place of live stock; and keep this roll by you, and often look at the first roll, and this also that you may quickly know how to find what you ought to do. Let all your servants on the manors be set at a fixed sum of money; and after August let your granges be closed.

The third rule teaches the discourse that the lord or lady ought to have with their chief seneschal before soue of thy good friends.

When the aforesaid rolls and inquests have been made, and as soon as you can, that the work of your people be not hindered, call your chief seneschal before any of your people in whom you trust, and speak thus to him: 'Good sir, you see plainly that to have my rights set forth clearly, and to know more surely the state of my people, and of my lands, and what I can henceforth do with what belongs to me and what leare, I have caused these inquests and enrolments to be made ; now I pray you, as one to whom I have committed trust, as many as I have under me guard and govern. And strictly I command you that you keep whole and without harm all my rights, franchises, and fixed possessions, and whatever of these said things is withdrawn or diminished by the negligence of others, or by wrongdoing, replace it as far as you are able. And my moreable goods and livestock increase in an honest and right way, and keep them faithfully. The returns from my lands, rents, and moreables, without fraud, and with lawful diminution, bring to me and to my treasury to spend according as I shall direct, that God may be satisfied, and my honour and my profit preserved by the foresight of myself and you and my other friends. Further, I strictly command that neither
fermement qe vous ne nul de ues baillifs desuz uous en nule maner par torsenouses demandes ou doutes ou acheysuners ou resceyte de presenz ou de douns ne gruez ne nepenez ne ne abatez les gens qe de me tignent riches ou poures esi en nule des auantdites maneres seyent par nul greuez penes ou abatuez e par certeyne enqueste qe ieo uoil ke vous facez en vostre eyre par tut le pussez atteyndre ke couenablement le facez amender e adrescer.

La quatre reule enseigne coment seignur ou dame poet encercer son estat de hors cest adire coment il ou ele poet tiure par ain de soun demeine.

En deus maners par asine poetz enquere uostre estat cest issi comaundez fermement ke en chescun liul entrer de vos bliez seyt gette en coste al entrer en graunge la viutyme garbe de chescun manere de ble e batu par sey e mesure e par asine de cele mesure porrez asiner trestu le remenaunt en graunge e sur coe fere lo ieo ke a meillurs maners de rostre tere enueez de vostre meyne ceux de qy vous plus affiez a entre en august al entrer de blees e a cel garder qe est auantdit. E si coe ne vous plest prenez ceste manere. Comaundez vostre seneschal ke chescun an a la seynt michel ke par prodeshommes e leals e sachaunz face asiner trestuz les taas de denz graunge e de hors de chescun manere de ble quant quarteres ipoent estre e puys com bien de quarteres en semence e en serganz la tere reprendra e donkes de tut le enter e de coe (fe remeynt outre la tere e outre les sergaunz escriuez la summe e de coe asseez vos despenses de rostre hostel en payn e en cerueyse. Issi veez quant quarters de ble vos volez despendre la semeyne en payn despensable com bien en aumoigne coe est si vos despendez deus quarters le jour coe sunt quatorze quarters la semeyne coe sunt seet cenz e quatorze quarters par aan. E si vous despendez chescun jour pur accrestre voster aumoigne deus quarters e demy
you nor any of your bailiffs under you in any way, by unlawful exactions, or fear, or accusations, or receipt of presents or gifts, vex or hurt or ruin those who hold of merich or poor; and if in any of these said ways they are by anyone vexed, hurt, or ruined, by fixed inquest which I will that you make in your eyre wherever it can be attained, quickly make amendment and redress.'

The fourth rele teaches how a lord or lady can further exhimine into their estate, that is to say, how he or she can lite yearly of their own.

In two ways by calculation can you inquire your estate. First this, command strictly that in each place at the leading of your corn there be thrown in a measure at the entrance to the grange the eighth sheaf of each kind of corn, and let it be threshed and measured by itself. And by calculating from that measure you can calculate all the rest in the grange. And in doing this I advise you to send to the best manors of your lands those of your household in whom you place most confidence to be present in August at the leading in of the corn, and to guard it as is aforesaid. And if this does not please you, do it in this way. Command your seneschal that every year at Nichaelmas he cause all the stacks of each kind of corn, within the grange and without, to be valued by prodent, faithful, and capable men, how many quarters there may be, and then how many quarters will be taken for seed and servants on the land, and then of the whole amount, and of what remains over and above the land and the serrants, set the sum in writing, and according to that assign the expenses of your household in bread and ale. Also see how many quarters of corn you will spend in a week in dispensable bread, how much in alms. That is if you spend two quarters a day, that is fourteen quarters a week, that is seven hundred and fourteen quarters a year. And if to increase your alms you spend two quarters and a half every day, that is seventeen
cest sunt en la semeyne disset quarters e demy e en le an vuit cent quarters e cinkante treys e demy. E quant ros auerez ceste summe trete de la graunt summe de voster ble donkes purrez vos trere la sume de la ceruerse sicom la custume ad este la semeyne pur les braces en roster hostel e donkes pernez garde de la summe quey remeyndra a rendre e de deners del ble e de uoster rente e des issues des plais de uos courtz e de roster estor leuez vos despenses de roster quisine de ros rins de voster garderobe e de soudes des sergaunz e estretez voster estor mes en totes maners pernez garde de roster ble qe ne seyt rendu hors de seysun ne saunz mester coe est adire si ros rentes e vos autres issues poeusent suffire a despenses de roster chambre e vins e quisine lessez roster ble ester enter deskes vous eyez le auauntage del ble de vn an e nent plus ou de demy al meyns.

La quinte redle voús aprent com sagenent tos deuez oUerer kaunt gardes ou chaetes yous deliuerent.

Si garde ou eschete vos deliure sanz delay maundez vos lettres a deus plus prodeshommes e les plus leaus de cel pays od in de ros deky rous affiez ke en nule manere ne bee a tele chose auer e fetes la garde ou la eschete estendre en totes choses e enueer a ros la estente desuz lur seals e solom coe ke comseil rous dorra e ros meymes uertetz si la retenez ou donez ou a rn des ros enter ou a deus ou a treys solom coe ke plus ou meyns de ceux auerount este en roster seruice e plus trauail soffert entour vos e pur vous e tutz iours especialment deuetz regarder cele reisoun. E pur nul conseil ne seyez trop hastif de cele chose doner deskes vous seez mout certe quey coe est e quey ceo vaut.
quarters and a half in the week, and in the year eight hundred and fifty three quarters and a half. And when you have subtracted this sum from the sum total of your corn, then you can subtract the sum for ale, according as weekly custom has been for the brewing in your household. And take care of the sum which will remain from sale. And with the money from your corn, and from your rents, and from the issues of pleas in your courts, and from your stock, arrange the expenses of your kitchen and your wines and your wardrobe and the wages of serrants, and subtract your stock. But on all manors take care of your corn, that it be not sold out of season nor without need; that is, if your rents and other returns will suffice for the expenses of your chamber and wines and kitchen, leare your store of corn whole until you have the adrantage of the com of another year, not more, or at the least, of half [a year].

The fifth rule teaches you how prudently you ought to act when wards or escheats fall to you.

If a ward or escheat fall to gou, at once send your letters to two of the most prudent and faithful of the country, with one of your own [people] in whom you have confidence, who in no way desire to have this thing; and cause the extent of the wardship or escheat to be made in all the things, and make them send you the extent under their seals, and according to what he who counsels you shall say and yourself direct, either keep it or give it whole to one of your people, or to two or three, according as more or fewer of them shall have been in your service, and much toil have undergone about you and for you, and you ought always especially to regard this reason. And by no :dvice be too hasty in giving the thing until you are most sure what it is and what it is worth.

La syme reule uous aprent coment e quant vos deuetz comaunder de clore e de ouerer yos graunges.

Comandez voster seneschal ke ros graunges par tut seyent bien closes apres le august ke nul sergaunt ne les oure sanz especial maundement ou lettre de uous ou de lui deskes seysun seyt de batre e dount seyt enueye vn leal homme ou garsun de vous ke prenge le prouost de cel liu e vn autre de la vile leal e coe tres totes houres seyent present al ouerer des graunges e al clore al batre al venter e al liuerer al seruer par taille e pernez garde ke nul seriaunt ne baillif ne seyt receueur de deners des issues mes sul le pronost ei vn autre qe eyent dount respondre.

La setyme reule dous aprent coment vos purrez sauoyr par comparer les acountes as asines de la estente ou de la defacte de vos seriaunz e baillifs de maneres e de teres.

Al chef del an kaunt totes les acountes serrount oyes e rendues de teres e de totes issues de totes despenses e de touz les maners pernetz les roules trestouz a rous e par vn ou deus de plus priuetz e leaus ke vos eyetz trespriuement fetes comperisun des roules des acontes rendues e des roules del asine de bletz e del estor ke vos feistes apres le august auaunt e solom coe ke il se acordent rerrez la entente ou la defaute de vos seriaunz e baillifs e solom coe metez amendement.

La ttyne reule vos aprent les generals comandemenz qe vos deuez fere meyntefez a tote voster meigne.

Amonestez trestote vostre meignee meyntefetz ke tutz iceux qe vos seruunt entendunt seruir a deu e seruir vous

The sixth rule teaches you how and when you ought to command your granges to be shut and opened.

Command your seneschal that your granges everywhere be entirely closed after August, that no servant may open them without special command or letter from you or him until threshing-time come. And then let there be sent a faithful man, or servant whom the provost shall take from that place, and another true man from the township, and all the time let them be present at the opening of the granges, and at the close, at threshing, at winnowing, at the delivery, at the survey by tally. And take care that no servant or bailiff receive the money of the returns, but only the provost and another who shall have wherewithal to answer.

The seventh rule teaches you how you yay hnow to compare the accounts mith the estinate of the extent or the fault of your servants and bailiffs of manors and Lands.

At the end of the year when all the accounts shall have been heard and rendered of the lands, and the issues, and all expenses of all the manors, take to yourself all the rolls, and by one or tro of the most intimate and faithful men that you have, make very careful comparison with the rolls of the accounts rendered, and of the rolls of the estimate of corn and stock that you made after the prerious August, and according as they agree you shall see the industry or negligence of your servants and bailiffs, and according to that make amendment.

The eighth rule teaches you the general cominandients that you ought often to give to your holisehold.
Exhort all your household often that all those who serve you shall know to serve God and you, faithfully and
loyaument e peniblement e pur la volente deu prefere en totes choses pur facent vester volente e voster pleysir en totes choses qe ne sunt pas encountre det.

La noume reule vous aprent ke vous deuetz dire souent a petitz e a graunz de roster heigne qe toutz facent yos comandenens.

Dites a toutz petitz e graunz e coe souent ke plenerement prestement e volenters sauz grucer e countredit facent trestutz vos comandemens qe ne sount en countre deu.

La dyye reule yous aprent le espectal comandement ke vos devez comander al mareschal de yoster hostel.

Comaundez a ceus qe gouerunt vostre hostel deuant tote voster meigne ke ententiue garde prengent qe tote roster meigne de denz e de hors seyt leal e penible chaste e nette honeste e profitable.

La vntzime reule yous aprent queux deyuent estre resceu de estre de toster meigne de denz ou de hors.

Comaundez ke nul ne seyt resceu ne retenu de estre de rostre meigne de denz ne de hors si lem neyt de luy renable qridaunce ke il seyt leaus sages e penibles a cel mester a ky il est rescen e od tut coe honestes e de bon murs.

La dotzyme reule vous aprent quele enqueste deyt estre fete souent par voster comaundement de yoster mesnee.

Comandez ke souent e ententiuement seyt fet enqueste si il eyt nul deleaus non sachaunt ord de sey letchers medlise iueroync nent profitable e ceux qe teus serrount trouee ou de queux tele fame surd ke il seyent fors iete de voster mesnee.
painstakingly, and for the will of God to prefer in all things to do your will and pleasure in all things that are not against God.

The ninth rule teaches you what you ought to say often to shall and great of your household, that all do your comanands.

Say to all small and great, and that often, that fully, quickly, and willingly, without grumbling and contradiction, they do all your commands that are not against God.

The tenth rule teaches you the particular comand that you ought to give to the marshal of your hostel.

Command those that govern your house before all your household that they keep careful watch that all your household within and without be faithful, painstaking, chaste, clean, honest, and profitable.

The eleventh rule teaches you who ought to be reCeived to be of your household indoors or without.

Command that no one be received, or kept to be of your household indoors or without, if one has not reasonable belief of them that they are faithful, discreet, and painstaking in the office for which they are received, and withal honest and of good manners.

The twelfth rule teaches you what inquest ought often to be made in your household by your commandment.

Command that often and carefully inquest be made if there be any disloyal, unwise, filthy in person, gluttonous, quarrelsome, drunken, unprofitable, and those who shall be found so, or of whom such report is spread. let them be turned out of your household.

La trestzyme reule vos aprent coment par vostre comandenent peis serra tenu en vostre hostel.

Comandez ke en nule manere ne seyent en vostre mesnee genz qe funt en hostel pareires descord deuisuins mes toutz serront de vn acord e de vne volente com vn quer a rn alme comandez le totz iceux qe sunt vos seriaunz de mester seyent obeysaunt e prest a ceux qe sount vtre eux en choses qui pertenent a lour mester.

La quatortzyme reule vos aprent coment voster aumoyne par voster comandement serra loyaument garde e cuilli e sagement en poures despendu.

Comandetz ke voster aumoyne seyt loyaument cuilla e garde ne pas enuee de la table as garsons ne pas hors de sale porte ne a sopers ne a dyners de garsons uuastroille mes fraunchement sagement e atemprement sanz tenser e batre parti a poures malades e mendinans.

## La quintzyme reule vous aprent coment vos hostes DEYUENT ESTRE RESCEUZ.

Comaundetz fermement ke trestoutz les hostes seculers e religius seyent des porters des usschers de marchales prestement e curteysement e a bele chere resceu des seneschals e de tutz curteysement apele en meme la manere herbergetz e seruitz.

La sestzime reule vous aprent en quele vesture yos genz yous deyuent seruir a roster manger.

Comandez ke vos chinalers e trestoutz vos gentils hommes qe vos robes pernent ke meymes ces robes chescun iour e nomement a voster manger e en voster presence usunt pur vostre honour garder ne pas veuz tabartz e soulletz herigaudz en countrefetes curtepies.

The thirteenth rule teaches you how by four commandment peace shall be kept in your hostel.

Command that in no way there be in your household any who make strife, discord, or divisions, in the hostel, but all shall be of one accord, of one will as of one heart and one soul. Command that all those who work at a craft be obedient and ready to those who are orer them in the things which belong to their craft.

The fourteenth rule teaches you how your alas shall, by your cominandient, be faithfllly obserted and gathered, and discreetly spent on the poor.

Command that your alms be faithfully gathered and kept, nor sent from the table to the grooms, nor carried out of the hall, either at supper or dinner, by good-fornothing grooms; but freely, discreetly, and orderly, without dispute and strife, divided among the poor, sick, and beggars.

## The fifteenth rule teaches you how your guests ought to be received.

Command strictly that all your guests, secular and religious, be quickly, courteously, and with good cheer received by the seneschal from the porters, ushers, and marshals, and by all be courteously addressed and in the same way lodged and served.

The sixteenth rule teaches you in what clothes your people should wait on you at meals.

Command your knights and all your gentlemen who wear your livery, that that same livery which they use daily, especially at your meals, and in your presence, be kept for your honour, and not old tabards, and soiled herigants, and imitation short hose.

## La disethime reule vous aprent coment vous deuetz

 aser genz a manger en vostre hostel.Fetes tote vostre fraunche mesnee e les hostes a plus ke lem put ser a tables de vne part e de autre ne pas ci quatre la treys e tote la frape des garsons quant la fraunche mesnee serra assise ensemble entrent e aseent e leuent. Estreytement defendez qe nule noyse ne soyt a vostre manger e vous meymes totes houres emyliu seetz de la haute table ke vostre presence a toutz ouertement cum seignur on dame aperge a tontz e ke rous ouertement pussez de rne part e dautre reer toutz ele seruise e les defautes e a coe seyetz ententine ke chescun iour a rostre manger eyetz ouertement deus sormewes sur voster hostel quant rous feez amanger e de coe sejetz aseure ke amerueille serretz tremutz e dote.

La disutyme reule yous aprent coment rous deuetz doner conge a yos genz he gardent mester en yoster hostel de partir en lour pays.

Al meyns ke ros poetz donetz conge a ceux qe gardent mester en roster hostel de partir en lur pays e quant ros conge donez aseez lour bref iour de reuenir a rous issi com eux ros volent seruir e si mul enparle ou gruce dites lus ke vos roletz estre seignur on dame e ke ros roletz ke lem ros serve a rostre noler e uostre pleyser e lie coe ne reut si ros engarnie e ros purneeretz de autres qe ros rodrount seruir a rostre pleyser dount aseez troueretz pur le rostre.

## La disneutine reule rous aprent coment vostre hostel deyt estre serui al manger.

Comandetz ke roster paneter od le pain e roster botiler od la coupe ensemble pe a pe rignent deuant ros a la table auant la beneyson del manger e ke treys radles seyent assis del mareschal chescun iou a seruir la haute table e les deus tables de coste de beyure e nul vessol de cerneyse sert assis

The seventeenth rule teaches you how you ought to SEAT YOUR PEOPLE at MEALS IN YOUR HOUSE.

Make your free men and guests sit as far as possible at tables on either side, not four here and three there. And all the crowd of grooms shall enter together when the freemen are seated, and shall sit together and rise together. And strictly forbid that any quarrelling be at your meals. And yon yourself always be seated at the middle of the high table, that your presence as lord or lady may appear openly to all, and that you may plainly see on either side all the service and all the faults. And be careful of this, that each day at your meals you have two overseers orer your household when you sit at meals, and of this be sure, that you shall be very much feared and reverenced.

The eighteenth rule teaches you how you ought to give leate to your people who bear office in your hotse to go to their own hoye.
As little as possible give leave to those who keep office in your house to go to their own homes, and when you give leare, give them a short time to return to yon, if they wish to serve you; and if any of them speak back or grumble, tell them that you will be lord or lady, and that you will that all serve your will and pleasure, and whoerer will not do so send away, and get others who will serve your pleasure-of whom you will find enough.

The nineteenth rule teaches you how your hostel OUGHT TO BE SERVED AT MEALS.

Command that your panter with the bread and your butler with the cup come before you to the table, foot by foot, before grace, and that three ralets be assigned by the marshal each day to serve the high table and the tro tables at the side with drink. And no vessel with ale slatl be
sur la table for desuz la table e le vin seyt assis sur les tables encoste soulement mes a la table la ou vous seez e vin e cerueyse seyt desutz la table for soul deuant vous seyt voster beyure sur la table. Comandetz ke voster mareschal ententif seyt de estre present sur la mesnee e nomement en sale de garder la mesnee de hors e de denz nette e sanz tenson ou noyse ou vileyne parole e ke a chescun mes apele les seruitours de aler a la quisine e il memes auge tote ueis deuant voster seneschal deske a vous e deske vostre mes seyt deuant rous assis e puys auge ester en myliu de la sale al chief e ueye ke ordeynement e saunz noyse augent les seriaunz od les mes de the part e de autre de la sale a ceux qe serrount assignez de asseer les mes issi qe lem ne asseie ne serue desordeynement par especialte dount rous memes eyez le oyl al seruise deske les mes seyent assis en le hostel e puys entendez a voster manger e coe maundez qe roster esquele seyt issi replenie e tassee e nomement de entremes ke curteysement pusetz partir de rostre esquele a destre e a senestre par tute voster haute table e la vous plerra tut eyent eux de coe ke vous meymes auetz deuaunt vous.

La tintyine reule vous aprent de prendre ensample de
SERUise de hostel de prudone al manger e al soper.
E ke vous sachez le establiement del hostel le Eueske de Nichole sachez qe chescun quarter de furment rend nef vint payns de blauncks e bis ensemblement cest payn de peys de cink mars e le hostel al manger est serui de deus mes gros e pleners pur la aumoyne acrestre e de deus entremes pleners pur tote la fraunche mesnee al super de vne mes de leger chose e ausi rntremes e puys furmage e si estraunges vignent al super lem lur sert solom coe ke il wht besoyne de plus.
placed on the table, but under the table, and wine only shall be placed on the table; but at the table where you are, wine and ale shall be under the table, except before you only shall drink be on the table. Command that your marshal be careful to be present orer the household, and especially in the hall, to keep the household within doors and without respectable, without dispute or noise, or bad words. And at each course call the servers to go to the kitchen, and they themselves to go always before your seneschal as far as you until your dishes be set before you, then go and be in the middle of the chief hall, and see that all servants with meats go orderly, and without noise to one part and another of the hall to those who shall be assigned to divide the meats, so that nothing be placed or served disorderly. Especially do you yourself keep a watch orer the service until the meats are placed in the hostel, and then attend to your own meals, and command that your dish be so refilled and heaped up, and especially with the light dishes, that you may courteously give from your dish to all the high table on the right and on the left, and where you shall please they shall soon have what you yourself had before jou.

The twentieth rule teaches you how you shall take an Eximple fron the serving at dinner and supper in the house of a good man.

And know the establishment of the house of the Bishop of Lincoln; know that each quarter of wheat shall make nine score loares of white and brown bread together, that is loaves of the weight of five marks, and the hostel at meat is serred with two meats, large and full, to increase the alms, and with two lighter dishes also full for all the freemen, and at supper with one dish not so snbstantial, and also light dishes, and then cheese. And if strangers come to supper they shall be served with more according as they have need.

La tintunime redle aprent coment votz genz se deyuent auer envers yos especials amys en tostre presence e en vostre absence.
Comandez vos chiualers e chapeleyns e serianz de mester e vos gentils hommes ke en beau semblaunt e heyte chere e prest seruise receyuent e honurent deuant rous e sanz vous en chescun lin toutz icenx qe eux pussent par rostre parole ou par rostre semblaunt aperceyure ke especialment rous sunt bien renuz e a queux vos volez especial honur ke en coe pussez especialment esprouer ke eus volent icoe ke vous roletz. E a plus ke ros porretz pur maladie ou deheit aforcez vos de manger en sale deuaunt ros genz kar seyetz certe graunt prue honour yous enuendra.

## La tintdeusine reule yous aprent coment yous deuetz auer enver vos balluifs e seriaunz de yos teres e maners quant il vignent deuant vos.

Quant vos baillifs e ros seriaunz de ros teres e maners renent deuant vous mout bel les apelez e bel parlez oueske eux e priuement e attemperment enqueretz coment vos genz bien fount e vos bliez en tere coment ros carues e roster estor se proue e teles demandes festes apertement e rostre seu serra moud le plus dote.

## La mintetresine recle yous aprent defendre les diners e les sopers hors de la sale.

Defendetz les diners e les sopers hors de la sale en muscettes e en chambres kar de coe surdunt de wast e nul honur a seignur ne a dame.

La tinte quartyine recle tos aprent pur quele reson ${ }^{1}$ le nombre des parceles.
Ke rous sachetz la resoun pur quey vous deuetz certeynement sauer la nombre de ros carues de tere e la nombre

[^48]The twenty-first rule teaches you how your people ought to behave towards your friends, both in your presence and absence.
Command that your knights, and chaplains, and servants in office, and your gentlemen, with a good manner and hearty cheer and ready service receive and honour, within your presence and without, all those in every place whom they perceive by your words or your manners to be especially dear to you, and to whom you would have special honour shown, for in so doing can they particularly show that they wish what you wish. And as far as possible for sickness or fatigue, constrain yourself to eat in the hall before your people, for this shall bring great benefit and honour to you.

The twenty-second rule teaches you how you ought
to behave towards your balliffs and servants of your lands and manors when they come before you.
When your bailiffs and your servants of lands and manors come before you, address them fairly and speak pleasantly to them, and discreetly and gently ask if your people do well, and how your corn is growing, and how profitable your ploughs and stock are, and make these demands openly, and your knowledge shall be much respected.

The twenty-third rule teaches you to forbid dinners AND SUPPERS OUT OF THE HALL.
Forbid dinners and suppers out of the hall, in secret and in private rooms, for from this arises waste, and no honour to the lord or lady.

The twenty-fourth rele teacies you for miat heason the NUMBER OF PARCELS.
Know the reason why you ought for certainty to know the number of your ploughlands, and the number of acres
des acres de waret e de tere semee coe est ke par coe sauerez com bien de ble vous denetz auer en gros com bien de estor com bien la tere deyt reprendre de semence dount vous deuetz saner ke pourement respount chescune carue de tere ke ne rend cend summes de ble dount tauntes carues de tere cum vos auetz tauntes centeynes de quarters al meyntz deuetz aner v seyetz certe ke la tere est malement gaynee ou fausement semee ou le ble emblee si vous anet donke quaraunte carues de tere vos denetz aner quatre mile quarters de ble si cinkaunte cink mile e issi auaunt vos deuetz sauer de chescun acre de waret poetz sustener par an deus berbitz almeyns dount cent acres de waret deus cent berbitz poent sustener deus cent acres quatre cent berbitz e issi auaunt si vos sauetz quauntes acres vous auetz en chescun ble asemer enqueretz com bien prent la acre de semail de cel soil de tere e contez le nombre de quarters de semence sauerez vous la issue de la semene e coe ke remeyndra.

## La vintequinte reule yous aprent les deus reules de vendre e de batre voster ble.

Tenetz deus reules endreyt de rente e de batre de ble ke ia ne seyt ble vendu ke le fore ne vous remenge a estramer vos faudes de berbitz le iour e a compost de denz la court. E seyetz certe ke le estreim issi retenu vous vaudra la meyte del ble vendu toutz iours. De autre part ne soffirez en nule manere ke lem bate aneyne en nul lin deuant noel ne a prouendre ne a rente einz seez touz a achat si vous poez e apres le noel quant lem comence a semer aueine festes batre uostre aueine e cel fore batu si freschement cuntreuaudra si vn poy seyt medle od feyn trestud feyn e fore dorra greynure force a uos boefs e vigour a trauailler e bien poez entendre ke si vous volez aueyne vendre donkes la purrez vons meuz vendre e plus prendre kaunt couent ke chescun eyt a semer.
of fallow and of sown land; it is that you may know how much corn you ought to have altogether ; how much stock, how much seed the land ought to yield. Know that each ploughland bears poorly that does not yield a hundred seams of corn, then of so many ploughlands as you have, so many hundreds of quarters at the least you ought to have, or be sure that the land is badly tilled, or falsely sown, or the corn stolen. If you have then forty ploughlands, you ought to have four thousand quarters of corn, if fifty, five thousand, and so on. Know that each acre of fallow ought to support yearly two sheep at the least, then a hundred acres of fallow can support two hundred sheep, two hundred acres four hundred sheep, and so on. If you know how many acres you have sown of each kind of corn, inquire how much the acre of that soil of land takes for sowing, and count the number of quarters of seed, and you shall know the return of seed, and what ought to be over.

## The twenty-fifth rule teaches you two rules for selling and threshing your corn.

Observe two rules with regard to selling and threshing corn : that there be no corn sold that the straw does not remain to strew the sheepfolds daily and to make manure in the court. And be sure that the straw so hept will be always worth the half of the corn sold. For the other part do not in any wise let anyone thresh oats before Christmas, neither for provender nor for sale before all is bought, if you can, and after Christmas, when one begins to sow oats, cause your oats to be threshed, and that straw so newly threshed will be as good if a little is mixed with hay. All hay and straw give great strength to your oxen and vigour to work. And understand well that if you wish to sell oats then you shall be able to sell better and take more, when it is necessary that each may have to sow.

La vintesime reule yous aprent coment a la seynt michel yous ordeyner yoster soiorn de tut le an.

A la seynt michel chescun an quant vos sauerez la asine de touz ros bletz donkes purueez uostre soiorn a trestouz cel an e par quaunte semeynes a chescun liu solom les seisuns del an e les auantages del pays en char e en pesschun e en nule manere ne chargez par dette ne par longe demore les lius la uus soiournerez mes issi deuisez vos soiourns ke le liu a vostre departir ne domoerge en dette mes alchune chose remenge al meneir dunt le maner pusse surde en acres de estor e nomement en vaches e en berbitz deskes voster estor pusse aquiter vos vins vos robes vostre cire e tut vostre garderobe e coe serra en poy de tens si rous tenez e ouerez apres cest escrit sicom rous poez veer ouertement enceste manere leyne de mil berbitz en bone pasture al meynz deyt respondre de cinkaunte mars par an. Leyne de deus mil cent mars e issi auaunt countez par milleres. Leyne de mile berbitz en mesne pasture deyt al meyns rendre quaraunte mars. En grose e en feble pasture trente mars.

La vinte setyme reule vos aprent he mult vaut la issue des raches e de berbitz.

Issue des vaches e des berbitz en furmage vaut amerueille de deners chescun iour en la seysun sanz reauls sanz agnels sanz le compost ke tút rend de ble e de bon.

La vinteutyme redle yos aprent queles houres en le an YOUS DEUETZ FERE YOUS ACHAZ.

Ioe lo ke a deus seisouns del an facez vos graunt achaz coe est ros rins e rostre cire e rostre garderobe a la feire de seynt Botulf coe qe rous despenderez en Lindeseye e en Norfuke e en le val de Bemuer e en cel pays de Kauersham e en cel a suthampton de Wyncestre e somersete al Bristowe vez robes achatez a seynt yue.

The twenty-sixth rule teaches how at mohaelias yoU may arrange your sojourn for all the year.
Every year, at Michaelmas, when you know the measure of all your corn, then arrange your sojourn for the whole of that year, and for how many weeks in each place, according to the seasons of the year, and the adrantages of the country in flesh and in fish, and do not in any wise burden by debt or long residence the places where you sojourn, but so arrange your sojourns that the place at your departure shall not remain in debt, but something may remain on the manor, whereby the manor can raise money from increase of stock, and especially cows and sheep, until your stock acquits your wines, robes, wax, and all your wardrobe, and that will be in a short time if you hold and act after this treatise as you can see plainly in this way. The wool of a thousand sheep in good pasture at the least ought to yield fifty marks a year, the wool of two thousand a hundred marks, and so forth, counting by thousands. The wool of a thousand sheep in scant pasture ought at the least to yield forty marks, in coarse and poor pasture thirty marks.

## The twenty-seventh rule teaches yod how mich the retcrn froni cows and sheep is worth.

The return from cows and sheep in cheese is worth much money erery day in the season, without calres and lambs, and without the manure, which all return corn and fruit.

The twenty-elghtil rule teaches you at what thames
in the year you ought to make your lurdhases.
I advise that at two seasons of the year you make your principal purchases, that is to say your wines, and rour was, and your wardrobe, at the fair of St. Botolph, what you shall spend in Lindsey and in Norfolk, in the Vale of Belvoir, and in the country of Caversham, and in that at Southampton for Winchester, and Somerset at Bristol ; your robes purchase at St. Ires.

INCIPIUNT STATUTA FAMILIE BONE MEMORIE DOMPNI ROBERTI GROSSETEST LINCOLNIE EPISCOPI.

Let alle men be warmed that seruen jou and warnynge be jeue to alle men that be of horseholde to serue god and sou trewly and diligently and to performynge or the wyllynge of god to be performed and fulfyllydde.

Fyrst let seruantis doo perfytely in alle thyngis zoure wylle and kepe they joure commaundements after god and ryjthwysnesse and withe oute condicioun ; and also with oute gref or offense. And say 3 e that be principalle heuede or prelate to alle goure sermantis both lesse and more that they doo fully reedyly and treuly with onte offense or ayenseying alle youre wille and commaundement that is not ayeynys god.

The secunde ys that ie commaunde them that liepe and haue kepyinge of soure howseholde a fore soure meynye that bothe with in and with onte the mernye be trewe, honest, diligent both chaste and profitabulle.

The thrydde commaunde ye that no mann be admittyd in zoure howse holde nother inwarde nother rtwarde but hit be trustyd and leuyd that je be trewe and diligent and namely to that office to the whiche he is admyttyd. Also that he be of goode maners.

The fowreth be hit sowzht and examined ofte tymrs yf ther be ony intrewman mkinnynge vinonest lecherous
stryffule drunke lewe unprofitabulle yf there be ony suche yfunde or diffamydde vppon these thyngis that they be case oute or put fro the howseholde.

The fyft commaunde 3 e that in no wyse be in the howseholde men debatefulle or stryffulle but that alle be of oonn acorde of oonn wylle euen lyke as in them ys oon mynde and oon sowle.

The sixte commaunde $j e$ that all tho that seruen in ony offyce be obedient and redy to them that be a bofe them in thyngis that perteynynn to there office.

The seuenth commaunde $z e$ that joure gentilmen yomen and other dayly bere and were there robis in joure presence and namely at the mete for joure worshyppe and not oolde robis and not cordynge to the lyuery nother were they oolde schoon ne fylyd.

The viii. commaunde $j e$ that joure almys be kepyd $\&$ not sende not to boys and knafis nother in the alle nothe outh of the halle ne be wasted in soperys ne dyners of gromys but wisely, temperatly with oute bate or betyng be hit distribute and the departyd to powre memn beggers, sykefolke and febulle.

The ix. make je joure owne howseholde to sytte in the alle as much as ye mow or may at the bordis of oon parte and of the other parte and lette them sitte to gedur as mony as may not here fowre and thre there. And when youre chef maynye be sett then alle gromys may entre sitte \& ryse.

The $x$. streytly forbede je that no wyse be at joure mete. And sytte se ener in the myddul of the hye borde that youre fysegge and chere be schewyd to alle mem of both partyes and that je may see lyjhtly the seruicis and defawtis and diligently see $j e$ that euery day in joure mete seson be two men ordeyned to ouer se youre mayny and of that they shalle drede jou.

The xi. commande $\mathfrak{z e}$ and yeue licence as lytul tyme as ye may with honeste to them that be in joure howseholde to go home. And whenne je yene licence to them assigne ze to them a slort day of comynge ayeyne undur peyne of
lesyng there seruice. And if ony mann speke ayen or be worthe say to hym What wille ye be Lorde ye wylle that y serue you after joure wylle. And they that wylle not here that ze say effectually be they ywarnyd and ye shall prouide other seruantis the which shalle serue you to your wylle or plesynge.

The xii is commaunde the panytere with youre brede and the botelare with wyne and ale come to gedur afore jou at the tabulle afore gracys and let be there three yomen assigned to serue the hye tabulle and the two syde tabullis in solenne dayes. And ley they not the ressels deseruyng for ale and wyne uppon the tabulle but afore you. But be they layid under the tabulle.

The xiii. commaunde ye the stywarde that he be besy and diligent to kepe the maynye in hys owne persone inwarde and rtwarde and namely in the halle and at mete that they be haue them selfe honestly with out stryffe fowlespekynge and noyse. And that they that be ordeynyd to sette messys brynge them be ordre and continuelly tyl alle be serued and not inordinatly and thorow affeccion to personys or by specialte. And take $j e$ hede to this tyl messys be fully sett in the halle and aftir tende ye to joure mette.

The xiiij. commaunde ze that youre dysshe be well fyllyd and hepid and namely of entremes and of pitance with oute fat carkynge that ye may parte courcteysly to thos thatt sitte beside bothe of the ryght hande and the left throw alle the hie tabulle and to other as plesythe you thowzght they haue of the same that ye have. At the soper be seruantis seruid of oon messe \& byjth metis and aftir of chese. And yf the come gestis seruice schalle be haued as nedythe.

The xv. commaunde ye the officers that they admitic youre knowlechyed men familiers frendys and strangers with mery chere the whiche they linowen you to wille for to admitte and receyue and to them the whiche wylle you worschipe and they wyllem to do that ye wylle to do that they may know them selfe to have be welcome to $\boldsymbol{z o u}$ and
to be welle plesyd that they be come. And al so muche as ze may with oute peril of sykenes \& werynys ete $z e$ in the halle afore soure meyny. For that shalle be to jour profyte and worshippe.

The xvi. when your ballyfs comyn afore joure speke to them fayre and gentilly in opynn place and not in priuey. And shew them mery chere \& serche and axe of them how fare owre men and tenauntis \& how cornys doon \& cartis and of owre store how hit ys multiplyed. Axe suche thyngis openly and knowe $s e$ certernly that they wille the more drede jou.

The xvii. commaunde 30 that dineris and sopers priuely in hid plase be not had \& be thay forbeden that there be no suche dyners nother sopers oute of the halle for of suche comethe grete destreccion and no worship therby growythe to the Lorde.

#  DUE DATE 

ORM 310

[^0]:    August 1890.

[^1]:    1 There were, of course, an extraordinary number of social grades, whose status differed for legal purposes; the statement above has mere reference to an economic grouping. It also ignores the free

[^2]:    tenants (and the redditus assisa. cf. p. 60), as their relations to the manorial lord appear to have been fiseal, and they lay outside the ordinary processes of agriculture as he was concerned in directing them.

[^3]:    ${ }^{1}$ See, however, Thorold Rogers, Agriculture and Prices, I. 19, and in the Glossary,' s.v. asseuer.

[^4]:    ${ }^{1}$ Domesday Book, I. 314, a. 2. Hotun in Yorkshire.

[^5]:    ${ }^{1} 1$ R.ii. c. 6.
    2Vinogradoil in The English Historical Revicw, I. 734.
    ${ }^{3}$ Hundred Rolls, II. 636.
    ${ }^{+}$Grouth of English Industry during the Early and Middle Ages, p. 513, for the case at Barrington in Cambridgeshire.

[^6]:    Un bandry.

[^7]:    - Agricultare and Prices. I. 460.

[^8]:    ${ }^{1}$ The calculation as to the plough- three-fieh is omitted, and the chapind required in the two-fied and the teron catte is difterently arranged,

[^9]:    ${ }^{1}$ But this is correctly given in
    University Library, marked Hh. iii. the transcript in the Cambridge

[^10]:    ${ }^{1}$ As in the Heralds' College MS.

    * Growth of English Industry during the Early and Middle Ages, 549

[^11]:    ${ }^{1}$ The work contains a table of English measures of land, as does does not occur in any other form of the English translation, but this

[^12]:    ${ }^{1}$ Pegge's Life of Grosseteste, 95.
    "See also The Babces Book (Early English Text Soc.), p. 32ヶ.

[^13]:    ' The hearing to this chapter is inserted from (12).

[^14]:    ${ }^{1}$ Inserted from (12). $\quad$ [e pus kantz de pre e quey valent par an.]
    ${ }^{3}$ [de terre.]

[^15]:    ${ }^{1}$ [Autre taunt auera a fere la charuwe de viijxx acres com la charuwe de ix ${ }^{x x}$ acres. Le uolez vos veer. Quant a viij ${ }^{x x}$ acres prenez $x l$ acres a fuernage $e$ xl acres a quaremel $e$ iiij acres a waret returnez e rebinez les iiij*x e dunkes ira la charue xjj ${ }^{x x}$ acres. En dreit de la charuwe de ix ${ }^{x x}$ acres $l x$ acres a yuernage e a quaremel e lx a waret e puys returnez e rebinez les lx acres a dunk ira la charuwe en $\operatorname{lan} x i \mathrm{j}^{\mathrm{xx}}$ acres.]

    2 [e ieo vous di pur veirs ke si la charuwe seyt garde e seruie a son dreyt kele pura tant fere.]
    ${ }^{3}$ xxxyi.

[^16]:    ${ }^{1}$ [Bien sauez ke vne quarenteyne deit auer quaraunte perches en longur e xl en leyse e la perche le roy est de xvi pez e demy e donk ad le acre en leyse xlvj peez.
